TMPA 8823-5VA4 SERVICE MANUAL

CONTENT

(1) General

This chassis is consists of main IC TMPA8823-5VA4, ST4053. TMPA8823-5VA4 is an integrated circuit for a PAL TV. A MCU and a TV signal processor (SP) are integraed in a 64-pin shrink DIP package. The MCU contains 8-bit CPU,ROM,RAM,I/O ports,timer/counters, A/D converters,an on-screen display controller,remoter control interfaces,IIC bus interfaces. The TV signal processor contains PIF,SIF,Video,multi-standard chroma,Sync,RGB processors.

(2) Frame Chart (see fig.1)

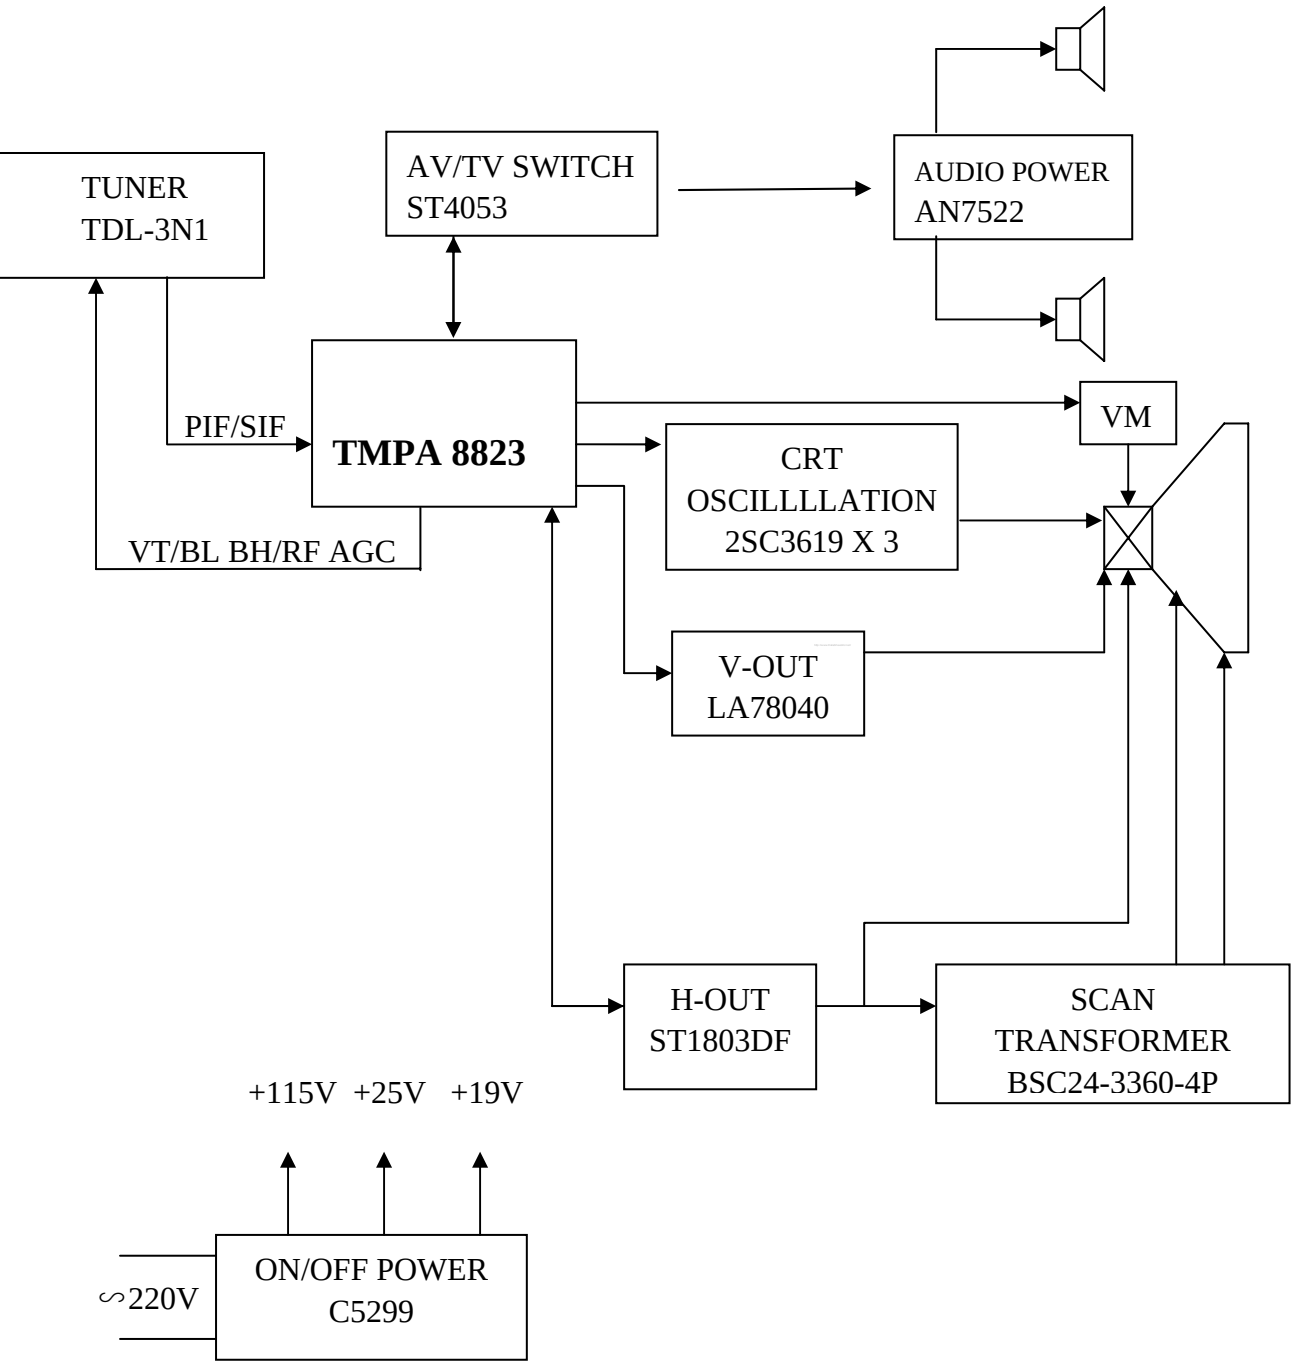

fig.1

(3) IC Function Introduction

3.1 N501 TMPA8823-5VA4 Function: MCU and SP

Icon	PIN	Description
SDA2	1	IIC bus serial data input/output
MUTE	2	Mute Output
KEY	3	Key input
DVSS	4	GND connection
RESET	5	Reset signal input
XOUT	6	8 MHz oscillator connection
XIN	7	8 MHz oscillator connection
TEST	8	GND connection
DVDD	9	5V power supply
VVSS	10	GND connection
TV GND	11	GND terminal for Analog block
FBP IN	12	Input terminal for FBP
H.OUT	13	Horizontal driving pulse output
H.AFC1	14	H AFC filter connection
V.SAW	15	Terminal to be connected capacitor to generate V saw signal
V.OUT	16	Vertical driving pulse output
H.Vcc(9V)	17	Vcc terminal for DEF circuit
NC	18	No use
Cb in	19	Input terminal for Cb signal
Y in	20	Input terminal for Y signal
Cr in	21	Input terminal for Cr signal
DIG GND	22	GND terminal for Digital block
C in	23	Input terminal for Chroma signal
V2 in	24	Input terminal for Video signal
DIG Vdd	25	Vcc terminal for Digital block
CW out	26	Output terminal for fsc wave signal
ABCL in	27	Input terminal for ABL/ACL control
EW out	28	Output terminal for east-west correction singal
IF Vvv(9V)	29	Vcc terminal for IF circuit
TV out	30	Detected PIF signal output terminal
SIF out	31	Detected SIF signal output terminal
DC NF	34	Terminal to be connected capacitor for DC Negative feedback
PIF PLL	35	Loop filter for PIF PLL connection
IF Vvv(5V)	36	Vcc terminal for IF circuit
REG FIL	37	Terminal to be connected capacitor for stabilizing internal bias
DE-EMP	38	Terminal to be connected capacitor for SIF Det De-Emphasis
IF AGC	39	IF AGC filter connection
IF GND	40	GND terminal for IF circuit

IF IN	41	Input terminals for IF signals
IF IN	42	Input terminals for IF signals
RF AGC	43	RF AGC control level output
YC Vcc	44	Vcc terminal for Y/C circuit
Vsm out	45	Output terminal for Vsm signal
Black DET	46	Terminal to be connected with Black Det filter for black stretch
APC Filter	47	Terminal to be connected with APC filter for Chroma demodulation
IK IN	48	Sense ACB cathode current input
RGB Vcc	49	Vcc terminal for RGB circuit
R OUT	50	Output terminal for R signal
G OUT	51	Output terminal for G signal
B OUT	52	Output terminal for B signal
TV GND	53	GND terminal for Analog block
A GND	54	GND connection
A VDD	55	5V power supply
NC	56	
SDA1	57	IIC bus serial data input/output
SCL1	58	IIC bus serial clock input
NC	59	
VT	60	VT output
SCL2	61	IIC bus serial clock input
SYNC	62	Horizontal sync signal input
REMOTE	63	Remote controller signal input
POWER	64	Power control (On=Hi. Off=L)

3.2 N001\N002 ST4053 Function: I^2C bus control , Audio/Video switching IC

Name	Pin	Function
RinV2	1	This pin is for input a right audio signal from an external source(V2 channel)
RinV1	2	This pin is for input a right audio signal from an external source(V1 channel)
VinV2	3	This pin is for input a composite video signal from an external source(V2 channel)
Vout	4	This pin is for output main channel composite video signal.
VinV1	5	This pin is for input a composite video signal from an external source(V1 channel)
BAND1	6	This pin is for output band1 to control tuner.
GND	7	This is the GND pin.
GND	8	This is the GND pin.
BAND2	9	This pin is for output band2 to control tuner.
BAND2	10	This pin is for output band2 to control tuner.
BAND2	11	This pin is for output band2 to control tuner.
LinV1	12	This pin is for input a left audio signal from an external source(V1 channel)
LinV2	13	This pin is for input a left audio signal from an external source(V2 channel)
Lout TV	14	This pin is for output left audio signal.
Rout TV	15	This pin is for output right audio signal.
Vcc	16	This is the power supply pin. Apply 9V to this pin.

3.3 N301 LA78040 Function: V-scan output

PIN	FUNCTION
1	Vertical feedback
2	Vertical working power supply
3	Pump power supply
4	Ground
5	Vertical output
6	Vertical protection
7	Vertical drive signal input

3.4 N601 AN7522 Function: Audio power amplifier

Name	Pin	Function
Vcc	1	Sound working voltage （+12V）
L Out	2，4	Sound siqnal output
Gnd	3	Ground
Mute	5	Standby
L In	6	Audio signal L input
Gnd	7	Ground
R In	8	Audio signal R input
Volume	9	Sound volume DC level 1 control
R Out	10,12	Sound siqnal output
Gnd	11	Ground

(4) I^2C Bus Control

4.1 Menu Entry

Press “D” button on the factory remote control to enter the “D” mode, the letter “D” will be displayed at the upper right coner and the adjusting items will be displayed at the upper left conrer. Press the channel +/- to select the preferred item; press the volume +/- to adjust the value of each item.

4.2 Item introduction

TMPA8823/5VA4 BUS DATA

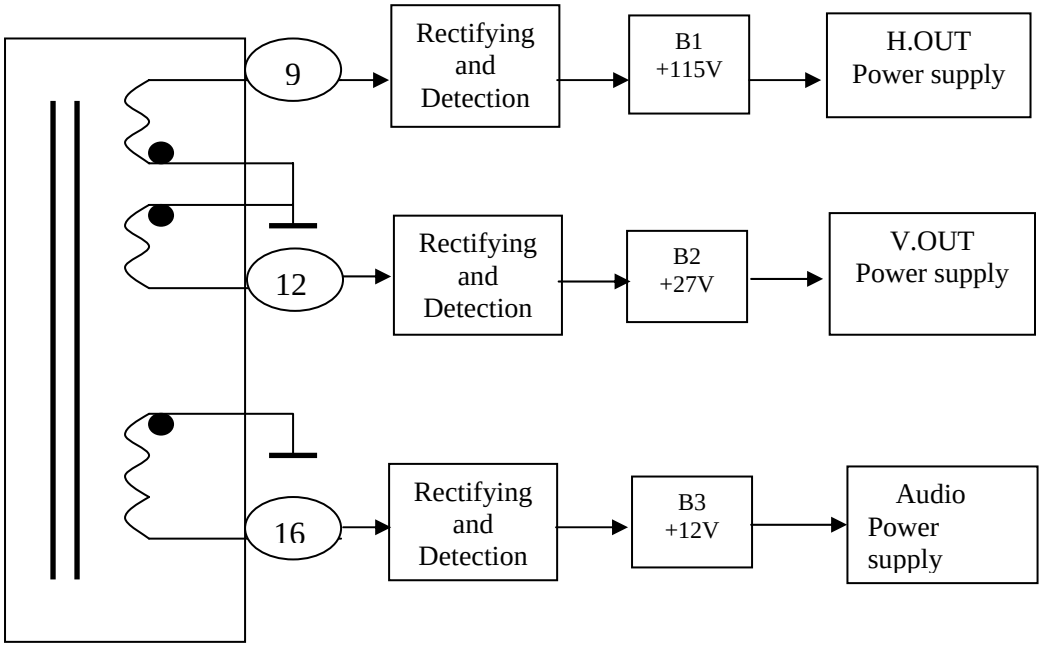
(6). Trouble shorting

T804



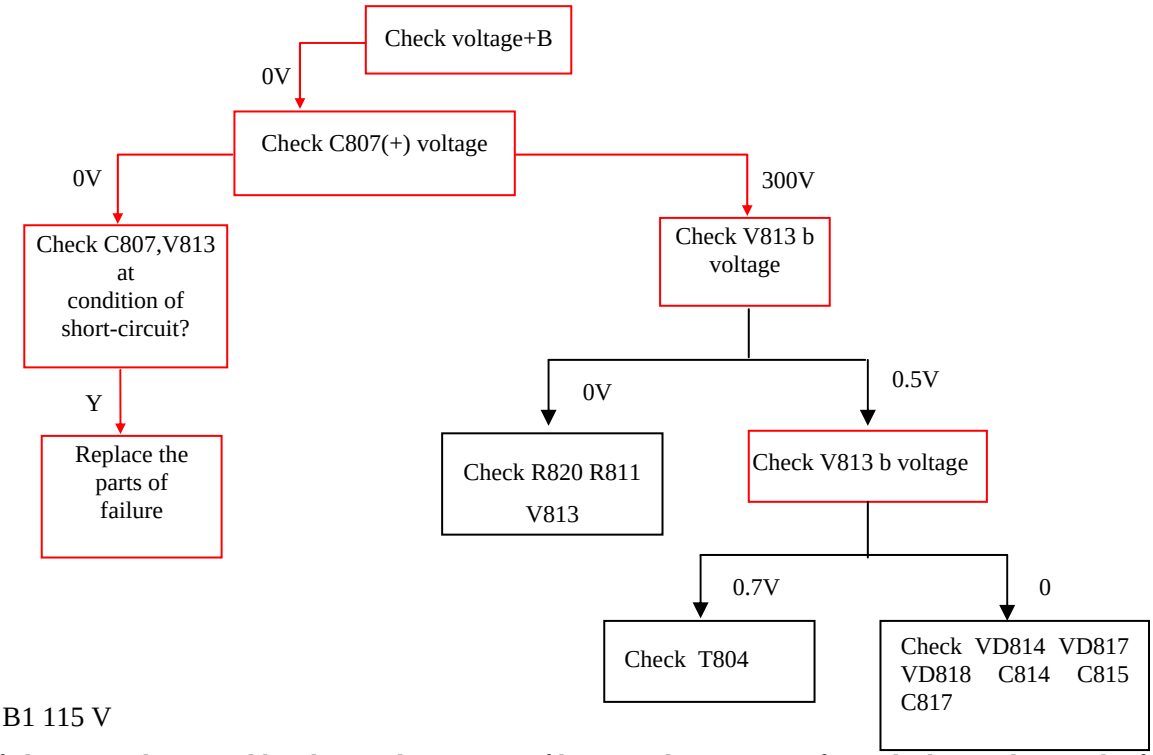
Power supply outline

6.1 No grating, no picture, no sound

General, these failures are produced by power sources, because of which refer to a wider area, so that can be divided them two conditions to explain: no B1 115 V and existing B1 115V.

(1) No B1 (115 V) voltage (voltage of network 220 V ac)

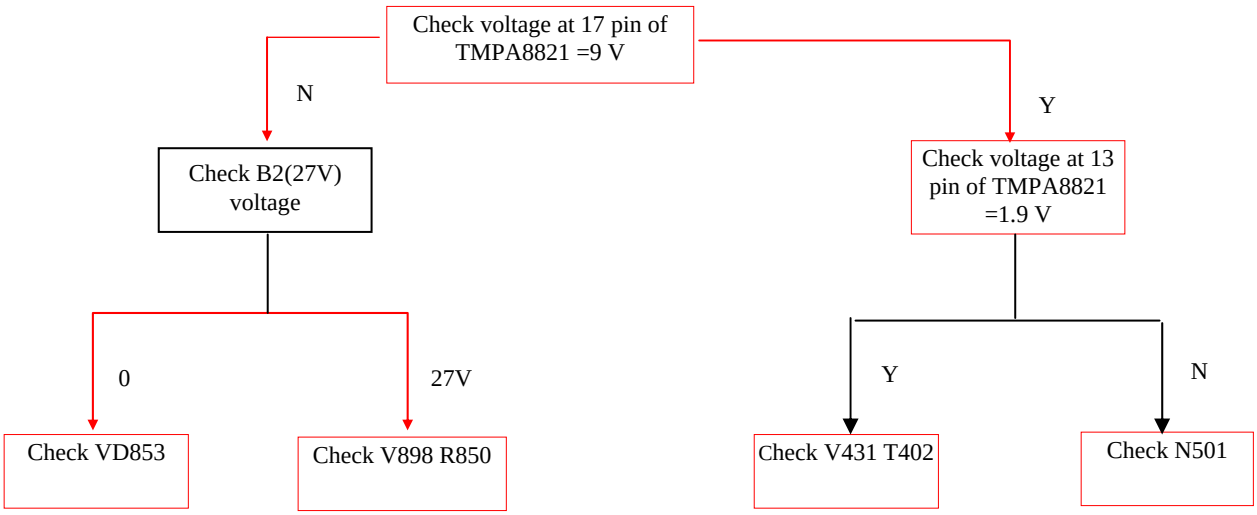
These failures may be caused by power supply switch.



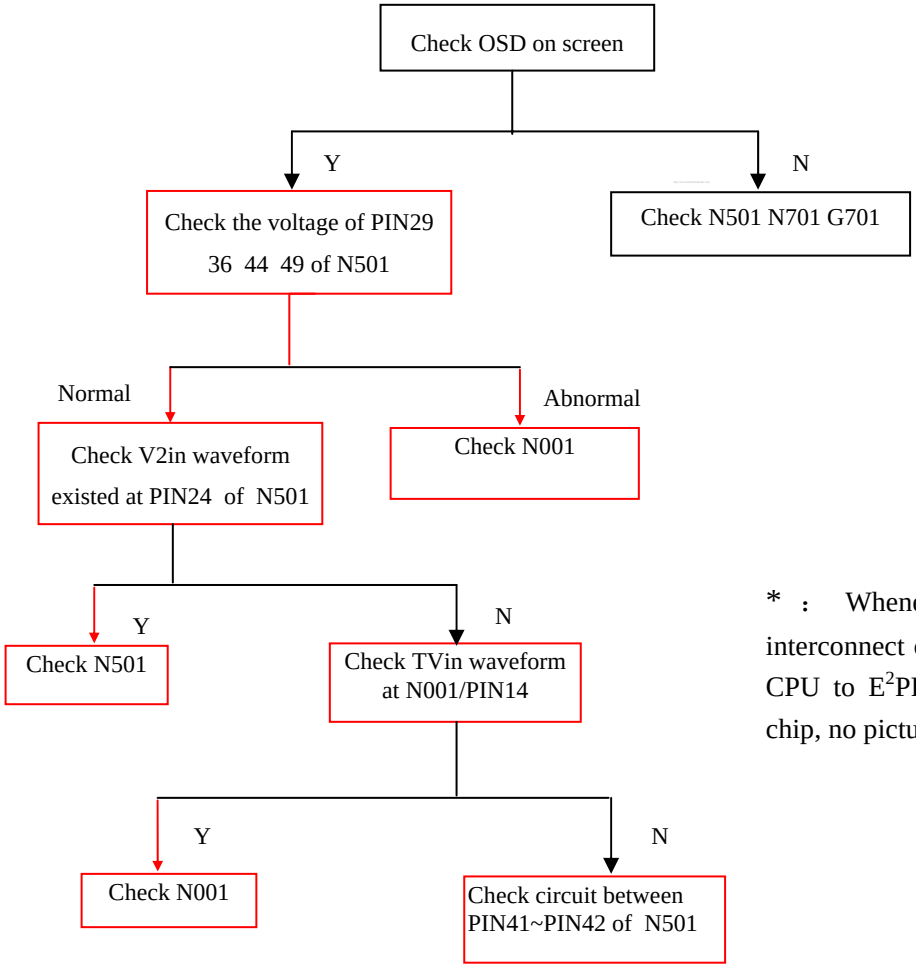
(2) Existing B1 115 V

These failures may be caused by abnormal operation of horizontal scan, to confirm which can observe the filament of

tube whether bright on. If determined horizontal scan in abnormal operation, look for the failure start from the horizontal drive stage. Search upward to TMPA8821 with method of checking DC voltage and waveform according to sequence: PIN13/H.OUT port→ PIN17 power supply→ N802/9V output.

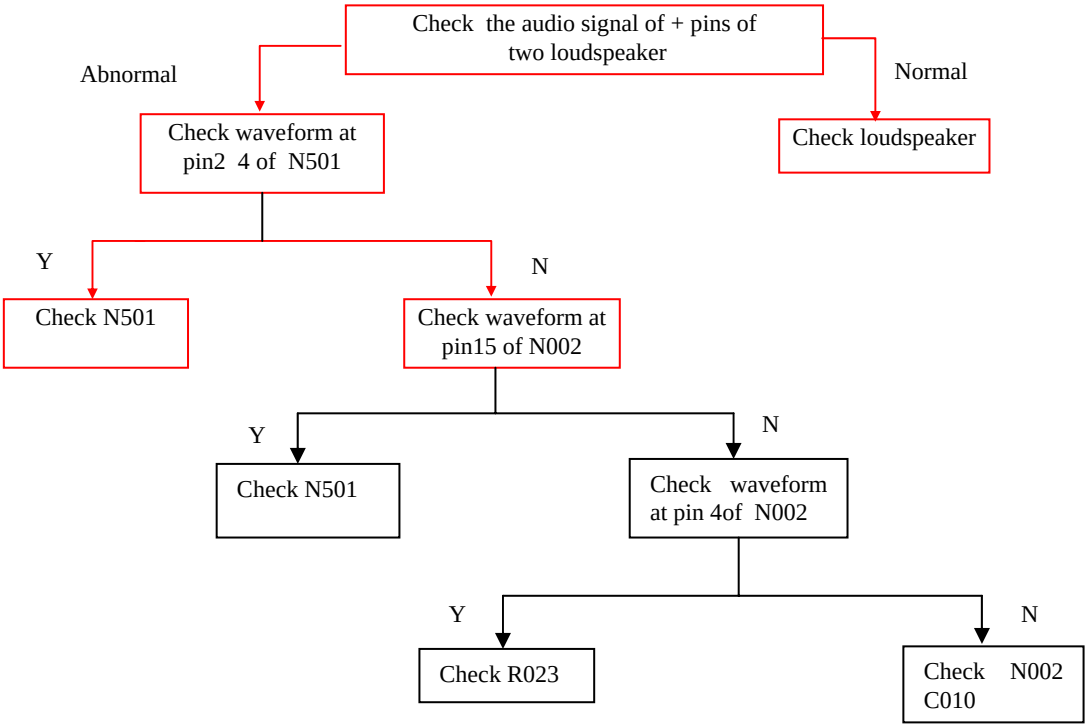


6.2 Existing grating and no picture

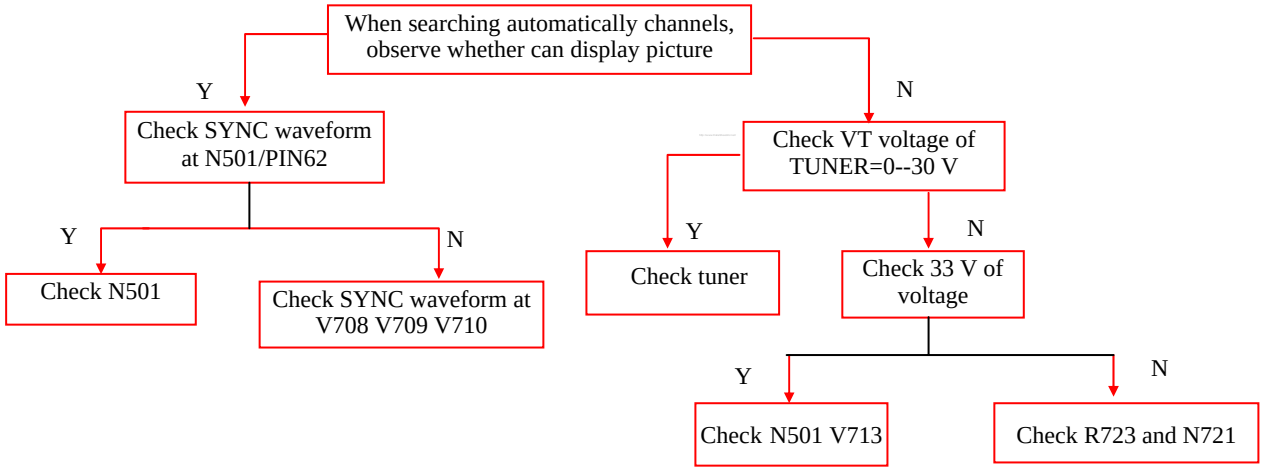


* : Whenever open or interconnect on the bus from CPU to E^2PROM and main chip, no picture can occur.

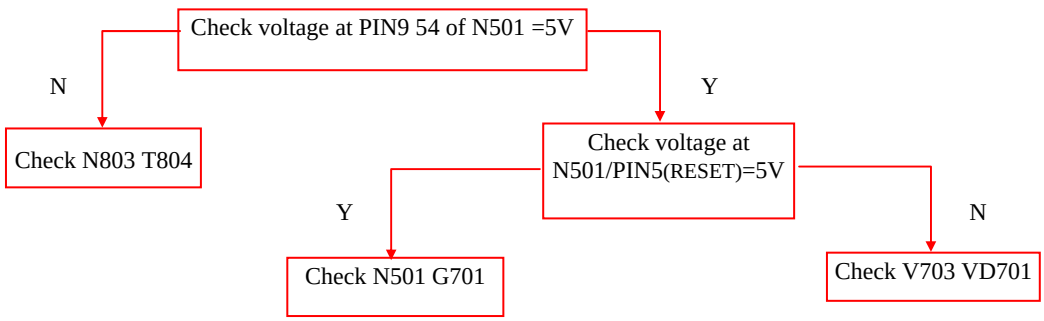
6.3 Existing grating and picture, no sound



6.4 Cannot save channels



6.5 CPU non-operating



N° Boletín	2166	Fecha	21/06/2006
Identificación del Producto	TELEVISOR COLOR		
Modelos	TVS-1430 MA TVS-2142MA TVS-2152PF	Procedencia / Marca	SANYO

Falla Reportada / Motivo :

METODO PARA ENTRAR AL MODO DE SERVICIO DEL TELEVISOR.

Solución aplicada :

La “D” en el Manual de Servicios significa Modo “D”. Los modos de fábrica son el Modo “S” y el Modo “D”. En el modo “S” sólo se pueden ajustar algunos parámetros; mientras que en el modo “D” se pueden ajustar todos los parámetros. Para los Chasis TMPA8823 (TV´s de 14” hasta 21”) y TMPA8859 (TV´s de 25” hasta 34”), se puede acceder al modo “S” utilizando el control remoto del usuario siguiendo los siguientes pasos:

Presione el botón VOL - en el panel de la TV hasta 0 (no suelte el botón VOL -), luego presione el botón DISPLAY en el control remoto para entrar al modo S.

Si se quiere acceder al modo “D”, para el Chasis TMPA8823 (TV´s de 14” hasta 21”), siga los siguientes pasos utilizando el control remoto:

Primero siga los pasos para entrar al modo “S”.

Presione el botón DISPLAY en el Control Remoto.

Presione el botón VOL - en el panel de la TV hasta 0 (no suelte el botón VOL -), luego presione el botón DISPLAY en el control remoto para entrar al modo D.
