

TMS27C256 32768 BY 8-BIT UV ERASABLE TMS27PC256 32768 BY 8-BIT PROGRAMMABLE READ-ONLY MEMORIES

SMLS256H- SEPTEMBER 1984 - REVISED NOVEMBER 1997

- Organization . . . 32768 by 8 Bits
- Single 5-V Power Supply
- Pin Compatible With Existing 256K MOS ROMs, PROMs, and EPROMs
- All Inputs/Outputs Fully TTL Compatible
- Max Access/Min Cycle Time

$V_{CC} \pm 10\%$

'27C/PC256-10	100 ns
'27C/PC256-12	120 ns
'27C/PC256-15	150 ns
'27C/PC256-17	170 ns
'27C/PC256-20	200 ns
'27C/PC256-25	250 ns

- Power Saving CMOS Technology
- Very High-Speed SNAP! Pulse Programming
- 3-State Output Buffers
- 400-mV Minimum DC Noise Immunity With Standard TTL Loads
- Latchup Immunity of 250 mA on All Input and Output Lines
- Low Power Dissipation ($V_{CC} = 5.5 V$)
 - Active . . . 165 mW Worst Case
 - Standby . . . 1.4 mW Worst Case (CMOS Input Levels)
- Temperature Range Options
- 256K EPROM Available With MIL-STD-883C Class B High Reliability Processing (SMJ27C256)

description

The TMS27C256 series are 32768 by 8-bit (262144-bit), ultraviolet (UV) light erasable, electrically programmable read-only memories (EPROMs).

The TMS27PC256 series are 32768 by 8-bit (262144-bit), one-time programmable (OTP) electrically programmable read-only memories (PROMs).

TMS27C256 32768 BY 8-BIT UV ERASABLE TMS27PC256 32768 BY 8-BIT PROGRAMMABLE READ-ONLY MEMORIES

SMLS256H- SEPTEMBER 1984 - REVISED NOVEMBER 1997

description (continued)

These devices are fabricated using power-saving CMOS technology for high speed and simple interface with MOS and bipolar circuits. All inputs (including program data inputs) can be driven by Series 74 TTL circuits without the use of external pull-up resistors. Each output can drive one Series 74 TTL circuit without external resistors.

The data outputs are 3-state for connecting multiple devices to a common bus. The TMS27C256 and the TMS27PC256 are pin compatible with 28-pin 256K MOS ROMs, PROMs, and EPROMs.

The TMS27C256 EPROM is offered in a dual-in-line ceramic package (J suffix) designed for insertion in mounting-hole rows on 15,2-mm (600-mil) centers. The TMS27PC256 OTP PROM is supplied in a 32-lead plastic leaded chip-carrier package using 1,25-mm (50-mil) lead spacing (FM suffix).

The TMS27C256 and TMS27PC256 are offered with two choices of temperature ranges of 0°C to 70°C (JL and FML suffixes) and - 40°C to 85°C (JE and FME suffixes). See Table 1.

All package styles conform to JEDEC standards.

Table 1. Temperature Range Suffixes

EPROM AND OTP PROM	SUFFIX FOR OPERATING FREE-AIR TEMPERATURE RANGES	
	0°C TO 70°C	- 40°C TO 85°C
TMS27C512-xxx	JL	JE
TMS27PC512-xxx	FML	FME

These EPROMs and OTP PROMs operate from a single 5-V supply (in the read mode), thus are ideal for use in microprocessor-based systems. One other 13-V supply is needed for programming . All programming signals are TTL level. These devices are programmable by the SNAP! Pulse programming algorithm. The SNAP! Pulse programming algorithm uses a V_{PP} of 13 V and a V_{CC} of 6.5 V for a nominal programming time of four seconds. For programming outside the system, existing EPROM programmers can be used. Locations can be programmed singly, in blocks, or at random.

operation

The seven modes of operation are listed in Table 2. The read mode requires a single 5-V supply. All inputs are TTL level except for V_{PP} during programming (13 V for SNAP! Pulse), and 12 V on A9 for the signature mode.

Table 2. Operation Modes

FUNCTION	MODE†							
	READ	OUTPUT DISABLE	STANDBY	PROGRAMMING	VERIFY	PROGRAM INHIBIT	SIGNATURE MODE	
\bar{E}	V_{IL}	V_{IL}	V_{IH}	V_{IL}	V_{IH}	V_{IH}	V_{IL}	
\bar{G}	V_{IL}	V_{IH}	X	V_{IH}	V_{IL}	X	V_{IL}	
V_{PP}	V_{CC}	V_{CC}	V_{CC}	V_{PP}	V_{PP}	V_{PP}	V_{CC}	
V_{CC}	V_{CC}	V_{CC}	V_{CC}	V_{CC}	V_{CC}	V_{CC}	V_{CC}	
A9	X	X	X	X	X	X	$V_{H}‡$ $V_{H}‡$	
A0	X	X	X	X	X	X	V_{IL} V_{IH}	
DQ0–DQ7	Data Out	Hi-Z	Hi-Z	Data In	Data Out	Hi-Z	CODE	
							MFG	DEVICE
							97	04

† X can be V_{IL} or V_{IH} .

‡ $V_{H} = 12\text{ V} \pm 0.5\text{ V}$.

read/output disable

When the outputs of two or more TMS27C256s or TMS27PC256s are connected in parallel on the same bus, the output of any particular device in the circuit can be read with no interference from the competing outputs of the other devices. To read the output of a single device, a low-level signal is applied to the \bar{E} and \bar{G} pins. All other devices in the circuit should have their outputs disabled by applying a high-level signal to one of these pins. Output data is accessed at pins DQ0 through DQ7.

latchup immunity

Latchup immunity on the TMS27C256 and TMS27PC256 is a minimum of 250 mA on all inputs and outputs. This feature provides latchup immunity beyond any potential transients at the P.C. board level when the devices are interfaced to industry-standard TTL or MOS logic devices. Input-output layout approach controls latchup without compromising performance or packing density.

power down

Active I_{CC} supply current can be reduced from 30 mA to 500 μA (TTL-level inputs) or 250 μA (CMOS-level inputs) by applying a high TTL or CMOS signal to the \bar{E} pin. In this mode all outputs are in the high-impedance state.

erasure (TMS27C256)

Before programming, the TMS27C256 EPROM is erased by exposing the chip through the transparent lid to a high intensity ultraviolet light (wavelength 2537 Å). EPROM erasure before programming is necessary to assure that all bits are in the logic high state. Logic lows are programmed into the desired locations. A programmed logic low can be erased only by ultraviolet light. The recommended minimum exposure dose (UV intensity \times exposure time) is 15-W•s/cm². A typical 12-mW/cm², filterless UV lamp erases the device in 21 minutes. The lamp should be located about 2.5 cm above the chip during erasure. It should be noted that normal ambient light contains the correct wavelength for erasure. Therefore, when using the TMS27C256, the window should be covered with an opaque label.

SMLS256H- SEPTEMBER 1984 - REVISED NOVEMBER 1997

initializing (TMS27PC256)

The one-time programmable TMS27PC256 PROM is provided with all bits in the logic high state, then logic lows are programmed into the desired locations. Logic lows programmed into an OTP PROM cannot be erased.

SNAP! Pulse programming

The 256K EPROM and OTP PROM are programmed using the TI SNAP! Pulse programming algorithm illustrated by the flowchart in Figure 1, which programs in a nominal time of four seconds. Actual programming time varies as a function of the programmer used.

Data is presented in parallel (eight bits) on pins DQ0 to DQ7. Once addresses and data are stable, \bar{E} is pulsed.

The SNAP! Pulse programming algorithm uses initial pulses of 100 microseconds (μ s) followed by a byte verification to determine when the addressed byte has been successfully programmed. Up to 10 (ten) 100- μ s pulses per byte are provided before a failure is recognized.

The programming mode is achieved when $V_{PP} = 13$ V, $V_{CC} = 6.5$ V, $\bar{G} = V_{IH}$, and $\bar{E} = V_{IL}$. More than one device can be programmed when the devices are connected in parallel. Locations can be programmed in any order. When the SNAP! Pulse programming routine is complete, all bits are verified with $V_{CC} = V_{PP} = 5$ V.

program inhibit

Programming can be inhibited by maintaining a high level input on the \bar{E} pin.

program verify

Programmed bits can be verified with $V_{PP} = 13$ V when $\bar{G} = V_{IL}$ and $\bar{E} = V_{IH}$.

signature mode

The signature mode provides access to a binary code identifying the manufacturer and type. This mode is activated when A9 is forced to 12 V. Two identifier bytes are accessed by toggling A0. All other addresses must be held low. The signature code for these devices is 9704. A0 selects the manufacturer's code 97 (Hex), and A0 high selects the device code 04, as shown in Table 3.

Table 3. Signature Mode

IDENTIFIER†	PINS									
	A0	DQ7	DQ6	DQ5	DQ4	DQ3	DQ2	DQ1	DQ0	HEX
MANUFACTURER CODE	V_{IL}	1	0	0	1	0	1	1	1	97
DEVICE CODE	V_{IH}	0	0	0	0	0	1	0	0	04

† $\bar{E} = \bar{G} = V_{IL}$, A9 = V_{H} , A1–A8 = V_{IL} , A10–A15 = V_{IL} , $V_{PP} = V_{CC}$, $\bar{PGM} = V_{IH}$ or V_{IL} .

Pin numbers shown are for J package.

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)‡

- Supply voltage range, V_{CC} (see Note 1) : -0.6 V to 7 V
- Supply voltage range, V_{PP} : -0.6 V to 14 V
- Input voltage range (see Note 1): All inputs except A9 : -0.6 V to $V_{CC} + 1$ V
- A9 : -0.6 V to 13.5 V
- Output voltage range (see Note 1) : -0.6 V to $V_{CC} + 1$ V
- Operating free-air temperature range ('27C256-__JL, '27PC256-__FML) T_A : 0°C to 70°C
- Operating free-air temperature range ('27C5256-__JE, '27PC256-__FME) T_A : -40°C to 85°C
- Storage temperature range, T_{stg} : -65°C to 150°C

‡ Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTE 1: All voltage values are with respect to GND.

IMPORTANT NOTICE

Texas Instruments and its subsidiaries (TI) reserve the right to make changes to their products or to discontinue any product or service without notice, and advise customers to obtain the latest version of relevant information to verify, before placing orders, that information being relied on is current and complete. All products are sold subject to the terms and conditions of sale supplied at the time of order acknowledgement, including those pertaining to warranty, patent infringement, and limitation of liability.

TI warrants performance of its semiconductor products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are utilized to the extent TI deems necessary to support this warranty. Specific testing of all parameters of each device is not necessarily performed, except those mandated by government requirements.

CERTAIN APPLICATIONS USING SEMICONDUCTOR PRODUCTS MAY INVOLVE POTENTIAL RISKS OF DEATH, PERSONAL INJURY, OR SEVERE PROPERTY OR ENVIRONMENTAL DAMAGE ("CRITICAL APPLICATIONS"). TI SEMICONDUCTOR PRODUCTS ARE NOT DESIGNED, AUTHORIZED, OR WARRANTED TO BE SUITABLE FOR USE IN LIFE-SUPPORT DEVICES OR SYSTEMS OR OTHER CRITICAL APPLICATIONS. INCLUSION OF TI PRODUCTS IN SUCH APPLICATIONS IS UNDERSTOOD TO BE FULLY AT THE CUSTOMER'S RISK.

In order to minimize risks associated with the customer's applications, adequate design and operating safeguards must be provided by the customer to minimize inherent or procedural hazards.

TI assumes no liability for applications assistance or customer product design. TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right of TI covering or relating to any combination, machine, or process in which such semiconductor products or services might be or are used. TI's publication of information regarding any third party's products or services does not constitute TI's approval, warranty or endorsement thereof.
