The following circuits are the test configurations that were used to obtain the data for the graphical section of the NCP1650/D data sheet. Each graph has a schematic associated with it and in some cases a description of the procedure.

APPLICATION NOTE

Power up chip. Set I_{S-} between 0 and -200 mV in 50 mV increments. For each value of I_{S-} set the ac input (pin 5) to various values from 0 to 3.8 volts. Record output P_{max} (pin 9).

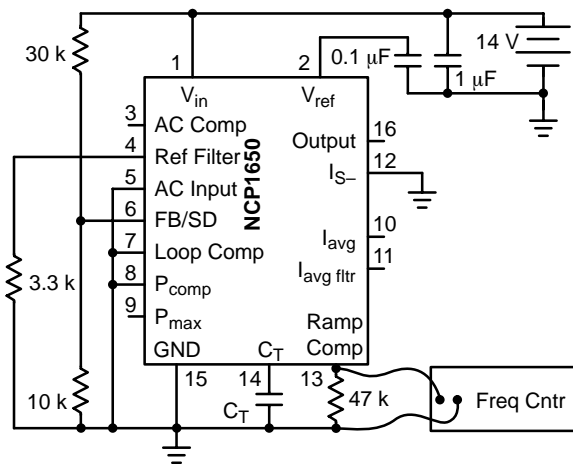

Figure 3. Frequency versus C_T
 Re: NCP1650/D data sheet, Figure 5

Bias device per the above figure. Install various values of C_T , and measure the frequency at pin 13. Do not measure directly from pin 14, as the impedance of the measuring device will cause errors in the reading.

Figure 4. Ramp Peak versus Frequency
 Re: NCP1650/D data sheet, Figure 6

Bias device per the above figure. Install various values of C_T , and measure the frequency at pin 13. Measure amplitude at pin 14 with an oscilloscope.

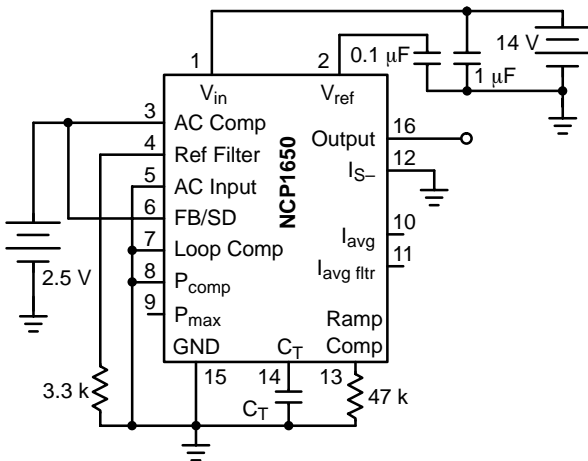

Figure 5. Max Duty Cycle versus Frequency
 Re: NCP1650/D data sheet, Figure 7

Measure frequency and duty cycle for various values of C_T .

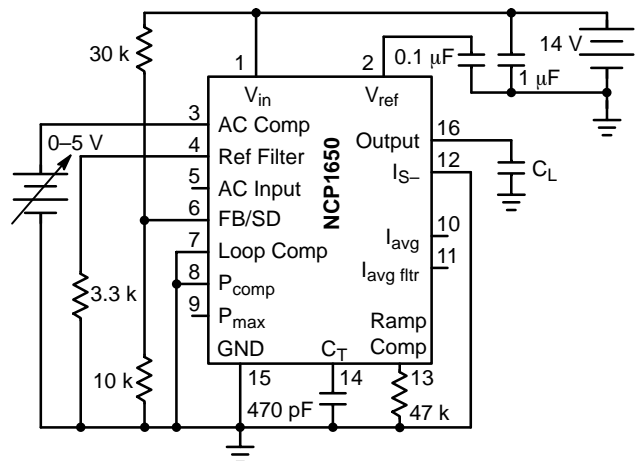

Figure 6. Drive Rise and Fall Time versus Capacitance
 Re: NCP1650/D data sheet, Figure 8

Adjust the voltage on pin 3 for approximately 50% duty cycle from the output driver. Measure the waveform on pin 16 with an oscilloscope and measure the rise and fall times at the 10% and 90% levels. Change C_L as required.

Energize unit by applying 14 volt supply. Using a precision supply with resolution of 1 mV or less, adjust the voltage at pin 6 for zero current out of pin 7. The voltage at pin 6 will be the effective 4.0 V reference voltage.

Energize unit by applying 14 volt supply. Using a precision supply with resolution of 1 mV or less, adjust the voltage at pin 9 for zero current out of pin 8. The voltage at pin 9 will be the effective 2.5 V reference voltage.

Apply power to 14 V supply and then to 1.5 V supply. Measure on time, and period at pin 16 using an oscilloscope. Vary capacitor value from 2000 pF to 100 pF for frequency range of 25 kHz to 300 kHz.
