

## Features

- Wide Input Voltage Range:
  - 7.5 V to 15 V
- Fixed Output Voltage:
  - 2.048 V, 2.5 V, 3 V, 3.3 V, 4.096 V, 5 V, and 10 V
- Low-Temperature Coefficient:
  - 2.5 ppm/°C Typical from 0°C to 70°C
  - 1 ppm/°C Typical from -40°C to 125°C
- High Initial Accuracy:
  - 0.05% Maximum
- Low Noise:
  - 1  $\mu$ Vpp/V
- Temperature Range: -40°C to 125°C
- Packages: SOP8 and MSOP8

## Applications

- Battery Test Equipment
- Industry Control
- Precision Instrumentation
- Medical Equipment

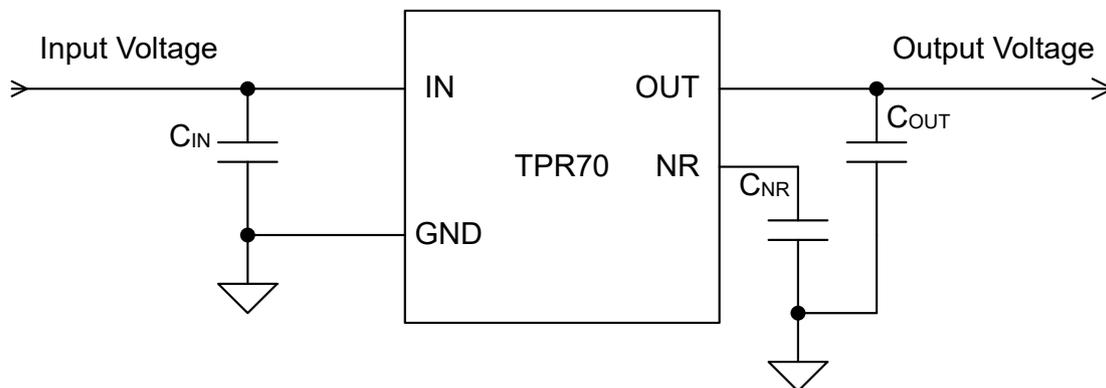

## Description

The TPR70 series is a family of high-precision and low-temperature-drift voltage references with an accuracy of 0.05%, and a temperature coefficient of 1.5 ppm/°C. All products of the TPR70 series can support both sinking and sourcing currents of  $\pm 10$  mA and have a low dropout voltage.

The high precision and excellent temperature stability performance make the TPR70 series an ideal reference in a system with high-resolution requirements.

The TPR70 series provides SOP8 and MSOP8 packages. All the products are qualified to operate within the temperature range from -40°C to +125°C.

## Revision History

Date	Revision	Notes
2023-07-15	Rev.Pre.0	Preliminary version.
2023-12-10	Rev.A.0	Initial released.
2024-05-17	Rev.A.1	1. Added a 10-V output voltage option. 2. Corrected the Marking Information in <a href="#">Order Information</a> .
2024-09-30	Rev.A.2	1. Added the test conditions of 10-V output voltage. 2. Corrected the name of Pin 5.
2025-12-03	Rev.A.3	Added TPR7012-SO1R, TPR7012-VS1R, TPR7012L-SO1R, and TPR7012L-VS1R.

## Pin Configuration and Functions

**Table 1. Pin Functions: TPR70**

Pin No.	Pin Name	I/O	Description
7, 8	DNC	–	Do not connect. Left this pin open or connected to the ground.
4	GND	–	Ground.
2	IN	I	Supply voltage input pin.
1, 3	NC	–	No internal connection.
5	NR	I	Noise reduction pin. A 10-nF or larger capacitor from NR to GND (as close as possible to the NR pin) is recommended to minimize the output noise level.
6	OUT	O	Reference voltage output pin.

**Low-Noise, Low-Drift, Precision Voltage Reference**
**Specifications**
**Absolute Maximum Ratings <sup>(1)</sup>**

Parameter		Min	Max	Unit
V <sub>IN</sub>	Supply Voltage	-0.3	20	V
T <sub>J</sub>	Maximum Junction Temperature	-40	150	°C
T <sub>A</sub>	Operating Temperature Range	-40	125	°C
T <sub>STG</sub>	Storage Temperature Range	-65	150	°C
T <sub>L</sub>	Lead Temperature (Soldering 10 sec)		260	°C

(1) Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. Exposure to any Absolute Maximum Rating condition for extended periods may affect device reliability and lifetime.

(2) All voltage values are with respect to ground.

**ESD, Electrostatic Discharge Protection**

Parameter		Condition	Minimum Level	Unit
HBM	Human Body Model ESD	ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>	±2000	V
CDM	Charged Device Model ESD	ANSI/ESDA/JEDEC JS-002 <sup>(2)</sup>	±1500	V

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

**Recommended Operating Conditions**

Parameter		Min	Typ	Max	Unit
V <sub>IN</sub>		7.5		15	V

## Detailed Description

### Overview

The TPR70 series is a family of high-precision and low-temperature-drift voltage references with an initial accuracy of 0.05% and a temperature coefficient of 1.5 ppm/°C. All products of the TPR70 series can support both sinking and sourcing currents of ±10 mA and have a low dropout voltage.

The high precision and excellent temperature stability performance make the TPR70 series an ideal reference in a system with high-resolution requirements.

### Functional Block Diagram

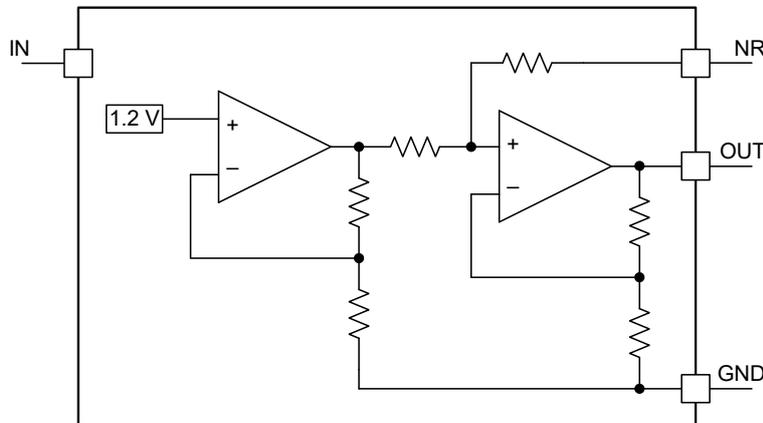

Figure 13. Functional Block Diagram

## Feature Description

### Temperature Drift

The TPR70 is one of the low-temperature-drift voltage references. Temperature drift is defined as the voltage variation over the operating temperature change, which can be calculated as [Equation 1](#).

$$\text{Temperature Drift} = \left( \frac{V_{\text{OUT,max}} - V_{\text{OUT,min}}}{V_{\text{OUT}}} \right) / (T_{\text{max}} - T_{\text{min}}) \times 10^6 \text{ (ppm/°C)} \quad (1)$$

Where,  $V_{\text{OUT,max}}$  and  $V_{\text{OUT,min}}$  are the maximum and minimum voltage values during the temperature change,  $T_{\text{max}}$  and  $T_{\text{min}}$  are the temperature range, and  $V_{\text{OUT}}$  is the nominal output voltage.

The maximum temperature drift of the TPR70 is 3 ppm/°C from -40°C to 125°C.

### Thermal Hysteresis

Thermal hysteresis is defined as the voltage change after the operating temperature cycling, which can be calculated as [Equation 2](#).

$$\text{Thermal Hysteresis} = \frac{|V_{\text{PRE}} - V_{\text{POST}}|}{V_{\text{OUT}}} \times 10^6 \text{ (ppm)} \quad (2)$$

Where,  $V_{\text{PRE}}$  is the output voltage before the temperature cycling,  $V_{\text{POST}}$  is the output voltage after the temperature cycling, and  $V_{\text{OUT}}$  is the nominal output voltage.

---

**Low-Noise, Low-Drift, Precision Voltage Reference****Noise Reduction**

The TPR70 features a low output noise voltage with a typical value of  $2.5 \mu\text{V}_{\text{PP}}$  at  $V_{\text{NOM}} = 2.5 \text{ V}$  under room temperature. The noise voltage is proportional to the output voltage and the operating temperature. The noise reduction (NR) pin provides additional filtering to further reduce the output noise. It is recommended to connect a 10-nF or greater capacitor from the NR pin to ground.

## Application and Implementation

### Note

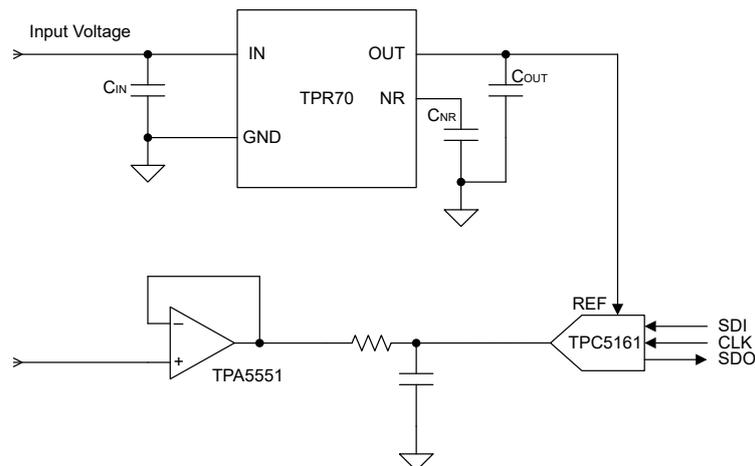

Information in the following application sections is not part of the 3PEAK's component specification and 3PEAK does not warrant its accuracy or completeness. 3PEAK's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

## Application Information

The TPR70 series is a family of high-precision and low-temperature-drift voltage references with an initial accuracy of 0.05% and a temperature coefficient of 1.5 ppm/°C. All products of the TPR70 series can support both sinking and sourcing currents of ±10 mA and have a low dropout voltage.

## Typical Application

Figure 14 shows the typical application schematic.

**Figure 14. Typical Application Circuit**

## Power Dissipation and Thermal Considerations

During normal operation, the device junction temperature should meet the requirements in the [Recommended Operating Conditions](#) table. Use the equations below to calculate the power dissipation and estimate the junction temperature.

The power dissipation can be calculated using [Equation 3](#).

$$P_D = (V_{IN} - V_{OUT}) \times I_{OUT} + V_{IN} \times I_Q \quad (3)$$

The junction temperature can be estimated using [Equation 4](#).  $\theta_{JA}$  is the junction-to-ambient thermal resistance.

$$T_J = T_A + P_D \times \theta_{JA} \quad (4)$$

## Layout

### Layout Guideline

- Both input and output capacitors must be placed as close to the pins of the device as possible.
- It is recommended to bypass the IN pin to ground with a 1- $\mu$ F to 10- $\mu$ F capacitor in parallel with a 0.1- $\mu$ F small ceramic capacitor. The loop area formed by the bypass capacitor connection, the IN pin, and the GND pin of the system must be as small as possible.
- It is required to place a decoupling 1- $\mu$ F to 50- $\mu$ F capacitor at the output. A small 1- $\mu$ F ceramic capacitor in parallel is recommended to filter the noise and improve the output transient performance.

### Layout Example
