TOSHIBA Photo-IC Silicon Epitaxial Planar

TPS820(B,F)

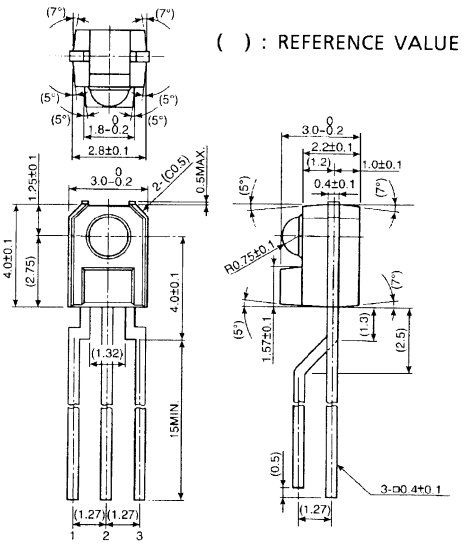
Lead(Pb)-Free

Photo-Electric Switches

Copiers, Printers, and Facsimiles

Luminosity Adjustment for Various Types of Equipment

Unit: mm



TOSHIBA	0-3H1

Weight: 0.12 g (typ.)

The TPS820(B,F) is a linear output photo-IC (current output type) which incorporates a photodiode and a current amp circuit in a single chip.

The sensitivity is superior to that of a phototransistor and its illuminance output linearity is excellent.

- High sensitivity: I_L = 1.5 mA (Min) @E = 0.1 mW/cm^2
- Little fluctuation in light current
- Output linearity of illuminance is excellent.
- Low current consumption: I_{CC} = 1 μA (max) at V_{CC} = 5 V
- Housed in compact side-view epoxy resin package
- Black package impermeable to visible light
- The TPS820 is suitable for use in combination with the TLN117(F) infrared LED lamp whose package size is the same.

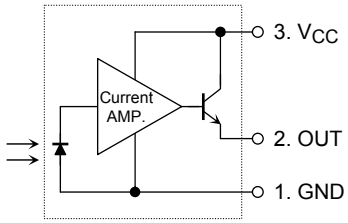
Absolute Maximum Ratings (Ta = 25°C)

Characteristics	Symbol	Rating	Unit
Supply voltage	V_{CC}	−0.5~7	V
Output voltage	V_O	≦ V_{CC}	V
Light current	I_L	10	mA
Power dissipation	P	250	mW
Power dissipation derating	ΔP/°C	−3.33	mW/°C
Operating temperature range	T_{opr}	−25~85	°C
Storage temperature range	T_{stg}	−40~100	°C
Soldering temperature (5 s) (Note1)	T_{sol}	260	°C

Note: Using continuously under heavy loads (e.g. the application of high temperature/current/voltage and the significant change in temperature, etc.) may cause this product to decrease in the reliability significantly even if the operating conditions (i.e. operating temperature/current/voltage, etc.) are within the absolute maximum ratings and the operating ranges.
Please design the appropriate reliability upon reviewing the Toshiba Semiconductor Reliability Handbook (“Handling Precautions”/“Derating Concept and Methods”) and individual reliability data (i.e. reliability test report and estimated failure rate, etc).

Note 1: At the location of 1.3 mm from the resin package bottom

Pin Configuration

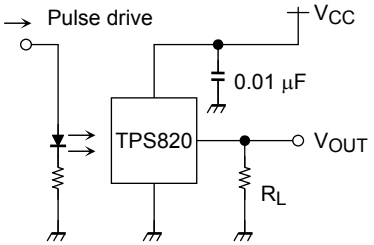


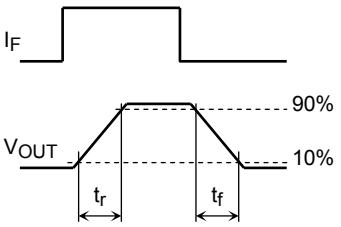
Optical and Electrical Characteristics (Ta = 25°C, V_{CC} = 5 V)

Characteristics	Symbol	Test Condition	Min	Typ.	Max	Unit
Current consumption	I_{CC}	E = 0, I_L must be open between pins	—	0.017	1	μA
Light current (1)	$I_L(1)$	E = 0.01 mW/cm^2 (Note2)	150	—	600	μA
Light current (2)	$I_L(2)$	E = 0.1 mW/cm^2 (Note2)	1.5	—	6	mA
Output linearity	$I_L(2)/I_L(1)$	—	8	10	12	—
Saturation output voltage	$V_{OUT(sat)}$	E = 0.1 mW/cm^2 (Note2) R_L = 10 kΩ	4.1	4.2	—	V
Dark current	I_D	E = 0	—	—	0.5	μA
Peak sensitivity wavelength	λ_p	—	—	870	—	nm
Rise time	t_r	V_{OUT} = 2.5 V	—	250	—	μs
Fall time	t_f	R_L = 10 kΩ (Note3)	—	700	—	μs

Note 2: The light used is a CIE standard A light source (a standard tungsten bulb with a color temperature of 2856K)

Note 3: Switching time measurement circuit and waveform





Precautions

- When this device is used in combination with an LED lamp, the lamp must be an infrared LED lamp.
- To stabilize the power line, insert a bypass capacitor of up to 0.01 μF between V_{CC} and GND, close to the device.
- When the power is turned on, the output value will fluctuate for 1 ms as the internal circuit stabilizes.

RESTRICTIONS ON PRODUCT USE

20070701-EN GENERAL

- The information contained herein is subject to change without notice.
- TOSHIBA is continually working to improve the quality and reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to comply with the standards of safety in making a safe design for the entire system, and to avoid situations in which a malfunction or failure of such TOSHIBA products could cause loss of human life, bodily injury or damage to property.
  In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent TOSHIBA products specifications. Also, please keep in mind the precautions and conditions set forth in the “Handling Guide for Semiconductor Devices,” or “TOSHIBA Semiconductor Reliability Handbook” etc.
- The TOSHIBA products listed in this document are intended for usage in general electronics applications (computer, personal equipment, office equipment, measuring equipment, industrial robotics, domestic appliances, etc.).These TOSHIBA products are neither intended nor warranted for usage in equipment that requires extraordinarily high quality and/or reliability or a malfunction or failure of which may cause loss of human life or bodily injury (“Unintended Usage”). Unintended Usage include atomic energy control instruments, airplane or spaceship instruments, transportation instruments, traffic signal instruments, combustion control instruments, medical instruments, all types of safety devices, etc.. Unintended Usage of TOSHIBA products listed in his document shall be made at the customer’s own risk.
- The products described in this document shall not be used or embedded to any downstream products of which manufacture, use and/or sale are prohibited under any applicable laws and regulations.
- The information contained herein is presented only as a guide for the applications of our products. No responsibility is assumed by TOSHIBA for any infringements of patents or other rights of the third parties which may result from its use. No license is granted by implication or otherwise under any patents or other rights of TOSHIBA or the third parties.
- Please contact your sales representative for product-by-product details in this document regarding RoHS compatibility. Please use these products in this document in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances. Toshiba assumes no liability for damage or losses occurring as a result of noncompliance with applicable laws and regulations.
