

MODEL TS67 THERMISTOR SENSOR PROBES

Thermistor is a generic term describing a semiconductor device that exhibits an electrical conductivity that is highly sensitive to temperature. The name was derived from the words, thermally sensitive resistor. These devices may be either *positive temperature coefficient (PTC)* or *negative temperature coefficient (NTC)* with respect to their resistance characteristics with temperature.

The model TS67 thermistor sensors have an NTC type resistance versus temperature characteristic. In addition, they have a matched resistance versus temperature curve and are interchangeable from one thermistor to another per the specified tolerance.

TS67-170

TS67- 64

TS67- 76

TS67- 32

(see reverse side for dimension)

Thermistor Specifications:

Base Resistance at 25°C. 15,000Ω

Interchangeable Tolerance ±1.0°C. over a 0°C. to 100°C. temperature range

THERMISTOR SENSOR - TEMPERATURE (°C) VS. RESISTANCE (Ω)
