8.0 Switch Truth Table

Table 5 Switch Truth Table

V1	V2	Active RF Path
0	1	All OFF
0	0	ANT-RF1 ON
1	0	ANT-RF2 ON

Attention:

[1] VDD should be applied first before V1 and V2, otherwise may cause damage to the device.

[2] There are internal pull-downs to ground on both V1 and V2 control pins, the state at start-up without any control voltage applied will be ANT-RF1 ON.

[3] If all OFF state is not used, the switch can be operated with single control pin V1.

9.0 Schematic and Evaluation Board

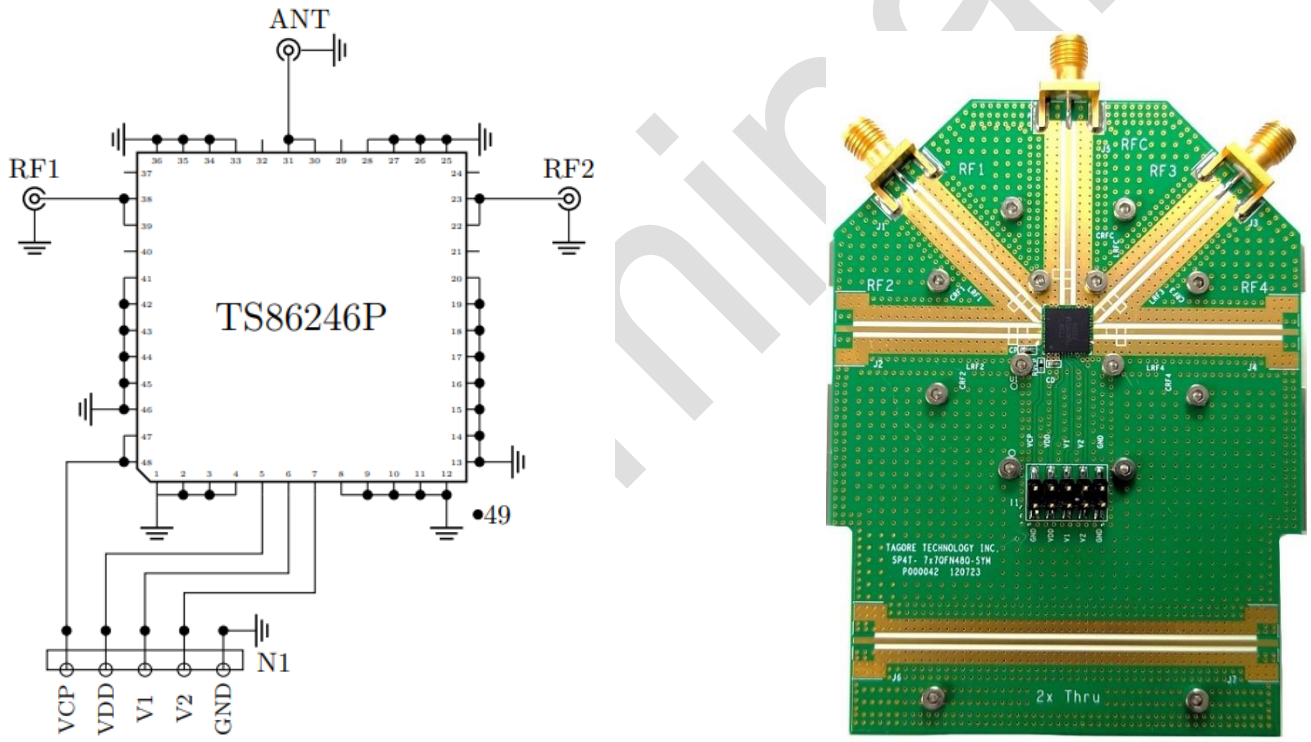

Figure 3 Schematic

Attention:

[1] 49 refers to the center pad of the device. Multiple Plugged through hole vias should be added on this Ground Pad and adequate heat sinking should be used.

[2] The purpose of connection between VCP and connector N1 is to monitor VCP, do not apply external voltage to VCP.

[3] Place matching components close to pin of the part.
