TSM16C (16-CH Auto Sensitivity Calibration Capacitive Touch Sensor)

TSM16C

16-CH Auto Sensitivity Calibration Capacitive Touch Sensor

SPECIFICATION

VER. 1.1

TSM16C (16-CH Auto Sensitivity Calibration Capacitive Touch Sensor)

General

The TSM16C is 16-Channel capacitive sensor with auto sensitivity calibration. And the supply voltage range is from 1.8 to 5.0V.

The TSM16C has the SLEEP mode to save the consumption. And the current consumption is 8 uA.

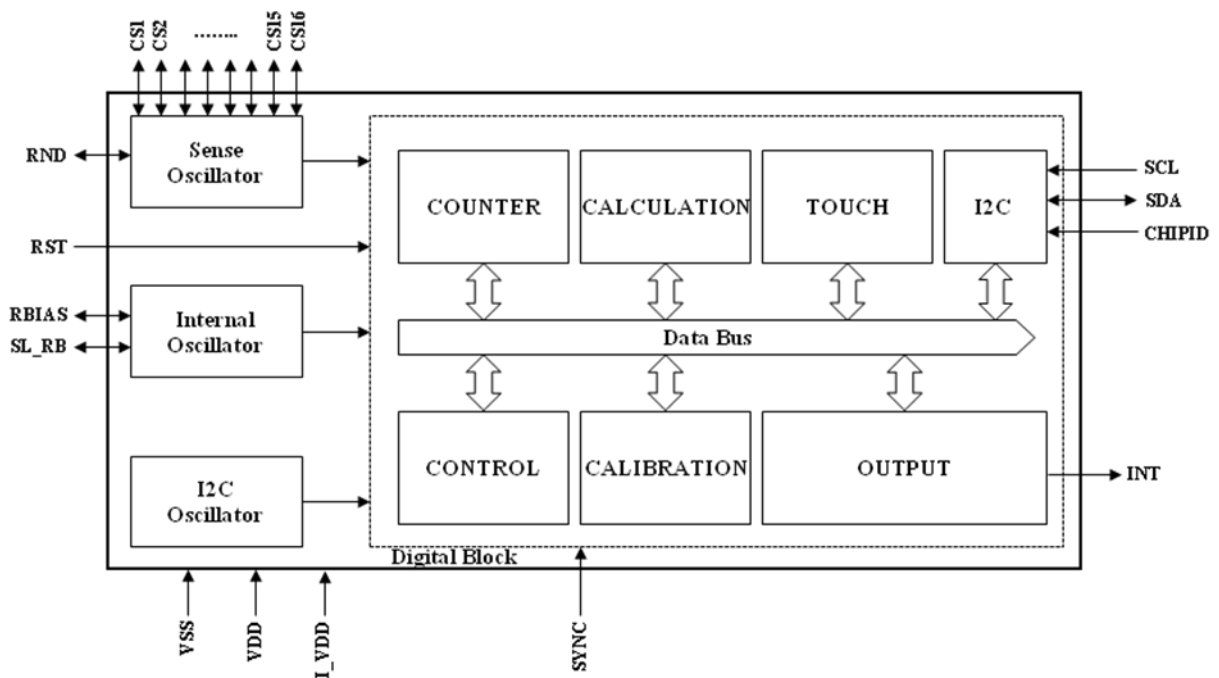

The TSM16C offers fast touch detection with fast response operation.

The result of touch sensing can be checked by the I²C serial interface. And touch intensity can be detectable within 3 steps (Low, Middle and High).

Feature

- 16-Channel capacitive sensor with auto sensitivity calibration
- Selectable output operation (single mode / multi-mode)
- Independently adjustable in 8 step sensitivity
- Adjustable internal frequency with external resistor
- Adjustable response time and interrupt level by the control registers
- I2C serial interface
- Embedded high frequency noise elimination circuit
- Typical current consumption xxx 45 uA (@3.0V)
- Sleep mode current consumption 8 uA (@3.0V)
- RoHS compliant 28QFN package

Block Diagram

Application

- Mobile application (mobile phone / PDA / PMP etc)
- Membrane switch replacement
- Sealed control panels, keypads
- Door key-lock matrix application
- Touch screen replacement application

TSM16C (16-CH Auto Sensitivity Calibration Capacitive Touch Sensor)

1 Pin Configuration

2 Pin Description

VDD, VSS

Supply voltage and ground pin.

I_VDD

Supply voltage pin for IO pads.

RND

Reference channel capacitive sensor input pin.

CS1 ~ CS16

Capacitive sensor input pins.

SCL, SDA

SCL is I²C clock input pin and SDA is I²C data input-output pin.

INT

Touch sensing interrupt output pin.

RBIAS

Internal bias adjust input.

SL_RB

Internal bias adjust input for the SLEEP mode.

RBIAS

Internal bias adjust input.

RST

System reset input.

I2C_EN

I2C Enable input. The I2C block is enabled when I2C_EN pin goes low.

CHIPID

I2C address selection input.

SYNC

The output mode selection input and sync pulse input/output for the sync operation.

TSM16C (16-CH Auto Sensitivity Calibration Capacitive Touch Sensor)

TSM16C (16-CH Auto Sensitivity Calibration Capacitive Touch Sensor)

3 Absolute Maximum Rating

Maximum supply voltage	5.5V
Maximum voltage on any pin	VDD+0.3
Maximum current on any PAD	100mA
Power Dissipation	800mW
Storage Temperature	-50 ~ 150 °C
Operating Temperature	-20 ~ 75 °C
Junction Temperature	150 °C

Note Unless any other command is noted, all above are operated in normal temperature.

4 ESD & Latch-up Characteristics

4.1 ESD Characteristics

Mode	Polarity	Max	Reference
H.B.M	Pos / Neg	8000V	VDD
		8000V	VSS
		8000V	P to P
M.M	Pos / Neg	400V	VDD
		400V	VSS
		400V	P to P
C.D.M	Pos / Neg	800V	DIRECT
		800V	

4.2 Latch-up Characteristics

Mode	Polarity	Max	Test Step
I Test	Positive	200mA	25mA
	Negative	-200mA	
V supply over 5.0V	Positive	8.25V	1.0V

TSM16C (16-CH Auto Sensitivity Calibration Capacitive Touch Sensor)

5 Electrical Characteristics

▪ $V_{DD}=3.3V$, $R_B=510k$, Sync Mode ($R_{sync} = 2M\Omega$) (Unless otherwise noted), $T_A = 25^\circ C$

Characteristics	Symbol	Test Condition	Min	Typ	Max	Units
Power supply requirement and current consumption						
Operating supply voltage	V_{DD}		1.8	3.3	5.0	V
Current consumption	I_{DD}	$V_{DD}= 3.3V$ $R_B=510k$ $R_{SB}=0$	-	25	-	μA
		$V_{DD}= 5.0V$ $R_B=510k$ $R_{SB}=0$	-	46	-	
		$V_{DD}= 3.3V$ $R_B=510k$ $R_{SB}=2M$	-	8	-	
		$V_{DD}= 5.0V$ $R_B=510k$ $R_{SB}=2M$	-	18	-	
Touch sensing performance						
Minimum detectable capacitance difference	ΔC	$C_S = 10pF$, $C_{DEG} = 200pF$ (I2C default sensitivity select)	0.2	-	-	pF
Sense input capacitance range (Note1)	C_S		-	10	100	pF
Sense input resistance range	R_S		-	200	1000	Ω
Output impedance (open drain)	Z_O	$\Delta C > 0.2pF$, $C_S = 10pF$, (I2C default sensitivity select)	-	12	-	Ω
		$\Delta C < 0.2pF$, $C_S = 10pF$, (I2C default sensitivity select)	-	30M	-	
		$V_{DD} = 5.0V$ $R_B = 510k$	-	80	-	
System performance						
External reset high pulse width	V_{DD_RST}	$T_A = 25^\circ C$	10	-	-	ms
Self calibration time after system reset	T_{CAL}	$V_{DD} = 3.3V$ $R_B = 510k$	-	100	-	ms
		$V_{DD} = 5.0V$ $R_B = 510k$	-	80	-	
Output maximum sink current	I_{OUT}	$T_A = 25^\circ C$	-	-	4.0	mA
Recommended bias resistance range (Note2)	R_B	$V_{DD} = 3.3V$	200	510	820	k Ω
		$V_{DD} = 5.0V$	330	620	1200	
Maximum bias capacitance	C_{B_MAX}		-	820	1000	pF
Recommended sync resistance range	R_{SYNC}		1	2	20	M Ω
Max. I ² C SCL clock speed	f_{SCL_MAX}	Maximum internal I ² C clock	-	-	2	MHz

Note 1 : The sensitivity can be increased with lower C_S value.

The recommended value of C_S is 10pF when using 3T PC(Poly Carbonate) cover and 10 mm x 7 mm touch pattern.

Note 2 : The lower R_B is recommended in noisy condition.

TSM16C (16-CH Auto Sensitivity Calibration Capacitive Touch Sensor)

6 TSM16C Implementation

6.1 RBIAS & SRBIAS implementation

The RBIAS is connecting to the resistor to decide the oscillator and internal bias current. The sensing frequency, internal clock frequency and current consumption are therefore able to be adjusted with R_B . A voltage ripple on RBIAS can make critical internal error, so C_B is connected to the VDD (not GND) is recommended. (The typical value of C_B is 820pF and the maximum Value is 1nF.)

The R_{SB} should be connected as above figure when the TSM16C operates in SLEEP Mode to save the current consumption. In this case, the consumption depends on the sum of the serial resistors and the response time might be longer.

Normal operation current consumption curve

The current consumption curve of TSM16C is represented in accordance with R_B value as above. The lower R_B requires more current consumption but it is recommended in noisy application. For example, refrigerator, air conditioner and so on. **And the change of the internal system frequency affects the sensitivity. The slow frequency has higher sensitivity than the fast frequency.**

TSM16C (16-CH Auto Sensitivity Calibration Capacitive Touch Sensor)

6.2 CS implementation

The TSM16C has basically eight steps sensitivity, which is available to control with internal register by I2C interface. The parallel capacitor C_{S1} is added to CS1 and C_{S16} to CS16 to adjust sensitivity. The sensitivity will be increased when smaller value of C_S is used. (Refer to the below Sensitivity Example Figure) It could be useful in case detail sensitivity mediation is required. The internal touch decision process of each channel is separated from each other. The twelve channel touch key board application can therefore be designed by using only one TSM16C without coupling problem. The R_S is serial connection resistor to avoid mal-function from external surge and ESD. (It might be optional.) From 200Ω to $1k\Omega$ is recommended for R_S . The size and shape of PAD might have influence on the sensitivity. The sensitivity will be optimal when the size of PAD is approximately an half of the first knuckle (it's about $10\text{ mm} \times 7\text{ mm}$). The connection line of CS1 ~ CS16 to touch PAD is recommended to be routed as short as possible to prevent from abnormal touch detect caused by connection line. The unused CS pin must be connected with the ground to prevent the unpredictable mal-function that occurred in the floating CS pin.

TSM16C (16-CH Auto Sensitivity Calibration Capacitive Touch Sensor)

Sensitivity example figure with default sensitivity selection

6.3 SYNC implementation

6.3.1 Multi Chip Application

Over two TSM16C can work on the one application at the same time thanks to SYNC function with this pin. The SYNC pulse prevents over two sensing signal from interfering with each other. R_{SYNC} is pull-down resistor of SYNC pin. Too big value of R_{SYNC} makes the SYNC pulse falling delay, and too small value of R_{SYNC} makes rising delay. Typical value of R_{SYNC} is $2M\Omega$. The Sync pin should be implemented as below. The TSM16C can also be used with the other TSXX series by employing this SYNC function. The TSM16C could only operate on multi output mode in this configuration.

TSM16C (16-CH Auto Sensitivity Calibration Capacitive Touch Sensor)

6.4 RESET implementation

TSM16C has internal data latches, so initial state of these latches must be reset by external reset pulse before normal operation starts. The reset pulse can be controlled by host MCU directly or other reset device. If not, the circuit should be composed as below figure. The reset pulse must have high pulse duration about a few msec to cover power VDD rising time. The recommended value of R_{RST} and C_{RST} are 330K Ω and 100nF.

Recommended reset circuits 1

7 I²C Interface

7.1 IRBIAS Implementation

The R_{IB} is only charged in making the I2C internal clock and should be implemented as above figure. The smaller R_{IB} will increase the I2C internal clock frequency and current consumption. (Refer to the following consumption curve)

I2C Block operation current consumption curve

TSM16C (16-CH Auto Sensitivity Calibration Capacitive Touch Sensor)

I2C clock frequency curve

7.2 Start & Stop Condition

- ◀ Start Condition (S)
- ◀ Stop Condition (P)
- ◀ Repeated Start (Sr)

TSM16C (16-CH Auto Sensitivity Calibration Capacitive Touch Sensor)

7.3 Data validity

The SDA should be stable when the SCL is high and the SDA can be changed when the SCL is low.

7.4 Byte Format

The byte structure is composed with 8Bit data and an acknowledge signal.

7.5 Acknowledge

It is a check bit whether the receiver gets the data from the transmitter without error or not. The receiver will write '0' when it received the data successfully and '1' if not.

TSM16C (16-CH Auto Sensitivity Calibration Capacitive Touch Sensor)

7.6 First Byte

7.6.1 Slave Address

It is the first byte from the start condition. It is used to access the slave device.

TSM16C Chip Address : 7bit

CHIPID	Address
GND	0xD0
VDD	0xF0

7.6.2 R/W

The direction of data is decided by the bit and it follows the address data.

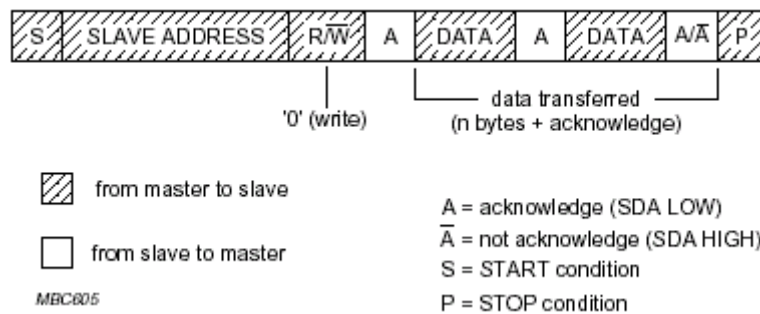

TSM16C (16-CH Auto Sensitivity Calibration Capacitive Touch Sensor)

7.7 Transferring Data

7.7.1 Write Operation

The byte sequence is as follows:

- the first byte gives the device address plus the direction bit (R/W = 0).
- the second byte contains the internal address of the first register to be accessed.
- the next byte is written in the internal register. Following bytes are written in successive internal registers.
- the transfer lasts until stop conditions are encountered.
- the TSM16C acknowledges every byte transfer.

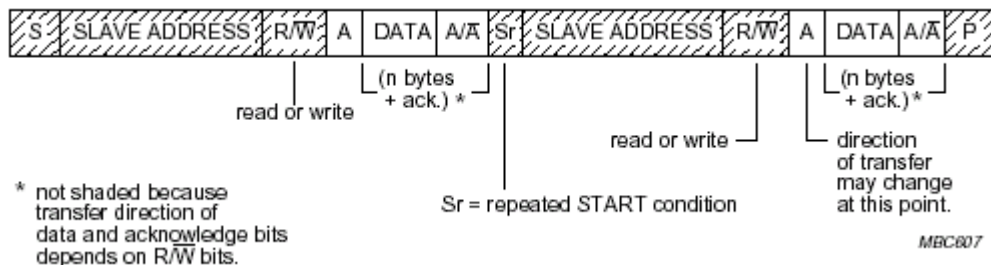

7.7.2 Read Operation

The address of the first register to read is programmed in a write operation without data, and terminated by the stop condition. Then, another start is followed by the device address and R/W= 1. All following bytes are now data to be read at successive positions starting from the initial address.

7.7.3 Read/Write Operation

7.8 I²C write and read operations in normal mode

The following figure represents the I²C normal mode write and read registers.

☞ Write register 0x00 to 0x01 with data AA and BB

TSM16C (16-CH Auto Sensitivity Calibration Capacitive Touch Sensor)

Start	Device Address 0xD0	ACK	Register Address 0x00	ACK	Data AA	ACK	Data BB	ACK	Stop
-------	---------------------	-----	-----------------------	-----	---------	-----	---------	-----	------

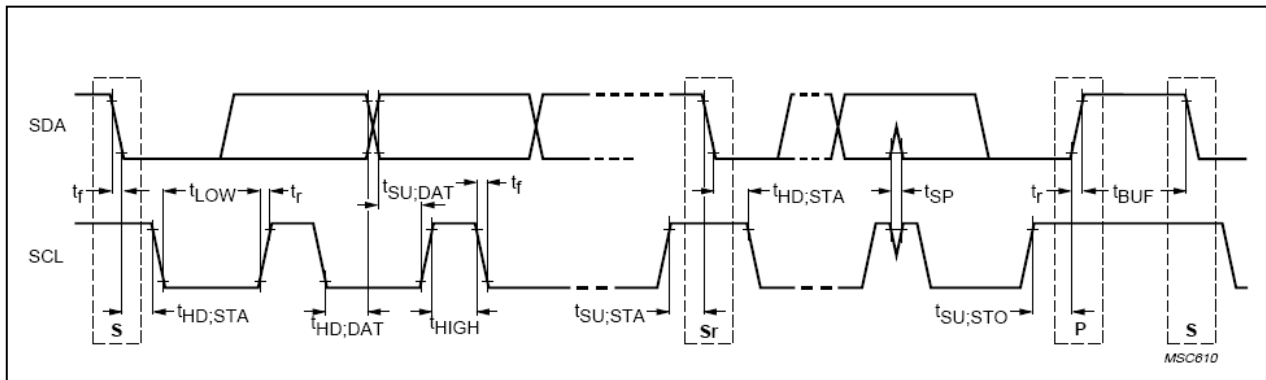

Read register 0x00 and 0x01

Start	Device Address 0xD0	ACK	Register Address 0x00	ACK	Stop
-------	---------------------	-----	-----------------------	-----	------

Start	Device Address 0xD1	ACK	Data Read AA	ACK	Data Read BB	$\overline{\text{ACK}}$	Stop
-------	---------------------	-----	--------------	-----	--------------	-------------------------	------

TSM16C (16-CH Auto Sensitivity Calibration Capacitive Touch Sensor)

8.2.2 General Control Register1

Type: R/W

Address	Register Name	Bit7	Bit6	Bit5	Bit4	Bit3	Bit2	Bit1	Bit0
08h	CTRL1	MS	FTC[1:0]		ILC[1:0]		RTC[2:0]		

Description

The calibration speed just after power on reset is very high during the time which is defined by FTC[1:0] to have a good adaption against unstable external environment.

Bit name	Reset value	Function
MS	0	Mode Selection 0: auto alternate (fast/slow) mode 1: fast mode
FTC[1:0]	01	First Touch Control 00 : $19 * 16^1 * 1\text{-Period (ms)}$ 01 : $37 * 16 * 1\text{-Period (ms)}$ 10 : $56 * 16 * 1\text{-Period (ms)}$ 11 : $74 * 16 * 1\text{-Period (ms)}$
ILC[1:0]	00	Interrupt Level Control 00: Interrupt is on middle or high output. 01: Interrupt is on low or middle or high output. 10: Interrupt is on middle or high output. 11: Interrupt is on high output.
RTC[2:0]	011	Response Time Control Response period = $RTC[2:0] + 2$

8.2.3 General Control Register2

Type: R/W

Address	Register Name	Bit7	Bit6	Bit5	Bit4	Bit3	Bit2	Bit1	Bit0
09h	CTRL2	0	0	MULTI	IMP_SEL	SRST	SLEEP	0	1

Description

Single/Multi output mode is selected according to MULTI bit. For impedance, IMP_SEL bit is used. All the digital blocks except analog and I2C block are reset when SRST is set. The SLEEP function allows getting very low current consumption when it is set. But the response time will be longer than normal operation. The bit0 and bit1 must be written with 0b'11 by host MCU.

Bit name	Reset	Function
MULTI	0	Single/Multiple Output Select 0: Multiple Output 1: Single Output
IMP_SEL	0	Impedance Select 0: High Impedance 1: Low Impedance
SRST	0	Software Reset 0: Disable Software Reset 1: Enable Software Reset
SLEEP	0	Sleep Mode Enable 0: Disable Sleep Mode

¹ The number, 16 is the time control constant value

TSM16C (16-CH Auto Sensitivity Calibration Capacitive Touch Sensor)

		1: Enable Sleep Mode
Bit[1:0]	01	These bits must be written by 2b'11 during a system initialize phase. (refer to the chapter 9 "initialize flow example")

8.2.4 Channel Reference Reset Control Register

Type: R/W

Address	Register Name	Bit7	Bit6	Bit5	Bit4	Bit3	Bit2	Bit1	Bit0
0Ah	Ref_rst1	Ch8	Ch7	Ch6	Ch5	Ch4	Ch3	Ch2	Ch1
0Bh	Ref_rst2	Ch16	Ch15	Ch14	Ch13	Ch12	Ch11	Ch10	Ch9

Description

The reference value of each channel will be renewing when Chx is set.

Bit name	Reset	Function
Chx	1	0: Disable reference reset 1: Enable reference reset
Ch1	0	0: Disable reference reset 1: Enable reference reset

8.2.5 Channel Sensing Control Register

Type: R/W

Address	Register Name	Bit7	Bit6	Bit5	Bit4	Bit3	Bit2	Bit1	Bit0
0Ch	Ch_hold1	Ch8	Ch7	Ch6	Ch5	Ch4	Ch3	Ch2	Ch1
0D	Ch_hold2	Ch16	Ch15	Ch14	Ch13	Ch12	Ch11	Ch10	Ch9

Description

The operation of each channel is independently available to control. A channel doesn't be worked and the calibration is paused when it is set.

Bit name	Reset	Function
Chx	1	0: Enable operation (sensing + calibration) 1: Hold operation (No sensing + Stop calibration)
Ch1	0	0: Enable operation (sensing + calibration) 1: Hold operation (No sensing + Stop calibration)

8.2.6 Channel Calibration Control Register

Type: R/W

Address	Register Name	Bit7	Bit6	Bit5	Bit4	Bit3	Bit2	Bit1	Bit0
0Eh	Cal_hold1	Ch8	Ch7	Ch6	Ch5	Ch4	Ch3	Ch2	Ch1
0Fh	Cal_hold2	Ch16	Ch15	Ch14	Ch13	Ch12	Ch11	Ch10	Ch9

Description

The calibration of each channel is independently available to control. Each channel is working even if a bit is set.

Bit name	Reset	Function
Chx	0	0: Enable reference calibration (sensing + calibration) 1: Disable reference calibration (sensing + No calibration)

TSM16C (16-CH Auto Sensitivity Calibration Capacitive Touch Sensor)

8.2.7 Output Register

Type: R

Address	Register Name	Bit7	Bit6	Bit5	Bit4	Bit3	Bit2	Bit1	Bit0
10h	output1	OUT4[1:0]		OUT3[1:0]		OUT2[1:0]		OUT1[1:0]	
11h	output2	OUT8[1:0]		OUT7[1:0]		OUT6[1:0]		OUT5[1:0]	
12h	output3	OUT12[1:0]		OUT11[1:0]		OUT10[1:0]		OUT9[1:0]	
13h	output3	OUT16[1:0]		OUT15[1:0]		OUT14[1:0]		OUT13[1:0]	

Description

The each channel output of TSM16C is compressed with 2 bits. It has 3 level output information that is low, middle and high.

Bit name	Reset value	Function
OUT1[1:0] ~ OUT16[1:0]	00	Output of channels 00: No output 01: low output 10: middle output 11: high output

8.2.8 Lock Mask Register

Type: R/W

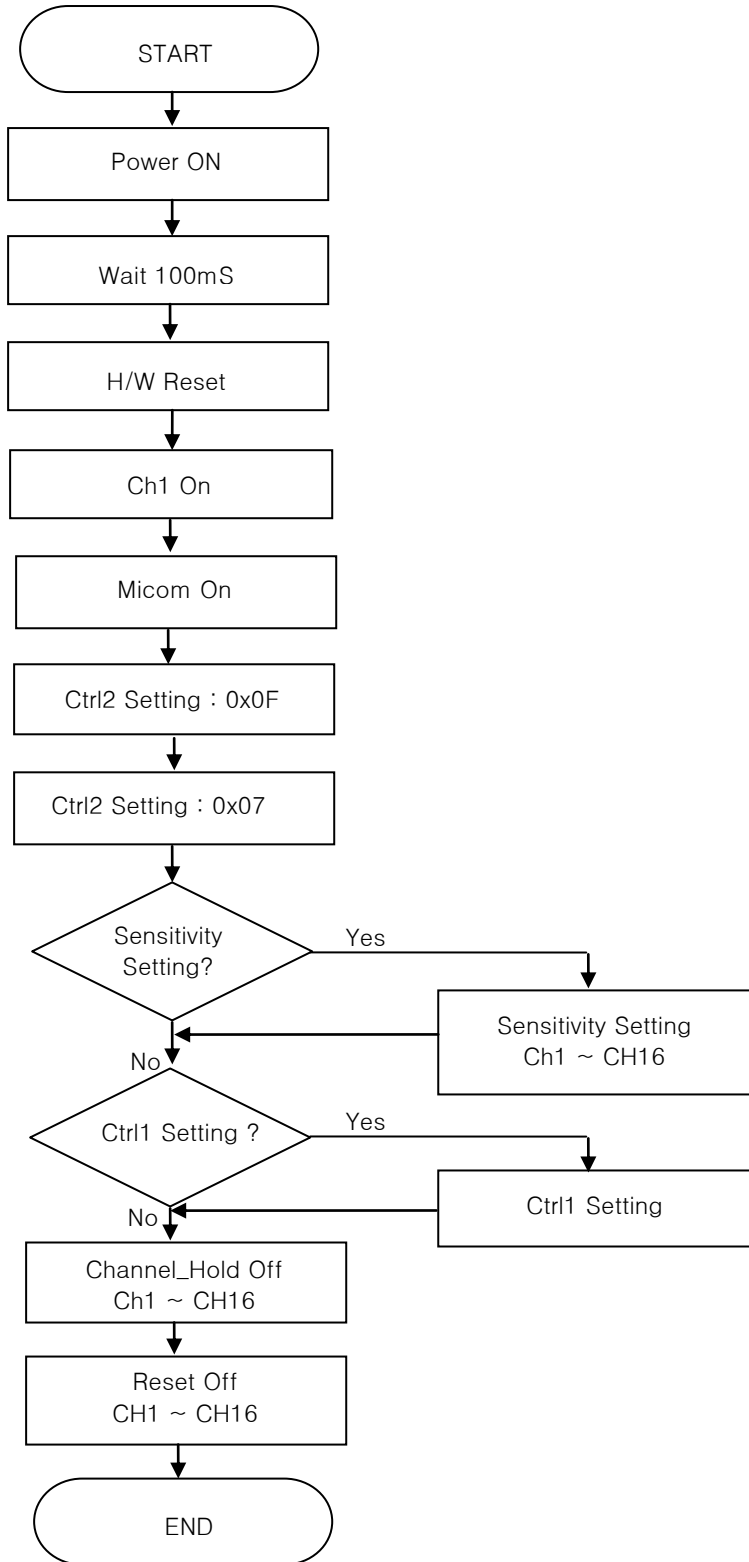

Address	Register Name	Bit7	Bit6	Bit5	Bit4	Bit3	Bit2	Bit1	Bit0
3Bh	Lock_mask	LOCK_MASK							

Description

Lock mask bits prevent the specific bits in TSM16C from changing in noise environments.

Bit name	Reset value	Function
LOCK_MASK	0000 0000	For applying MULTI bit(0x09[5]), Lock mask bits should be 8'h10100101

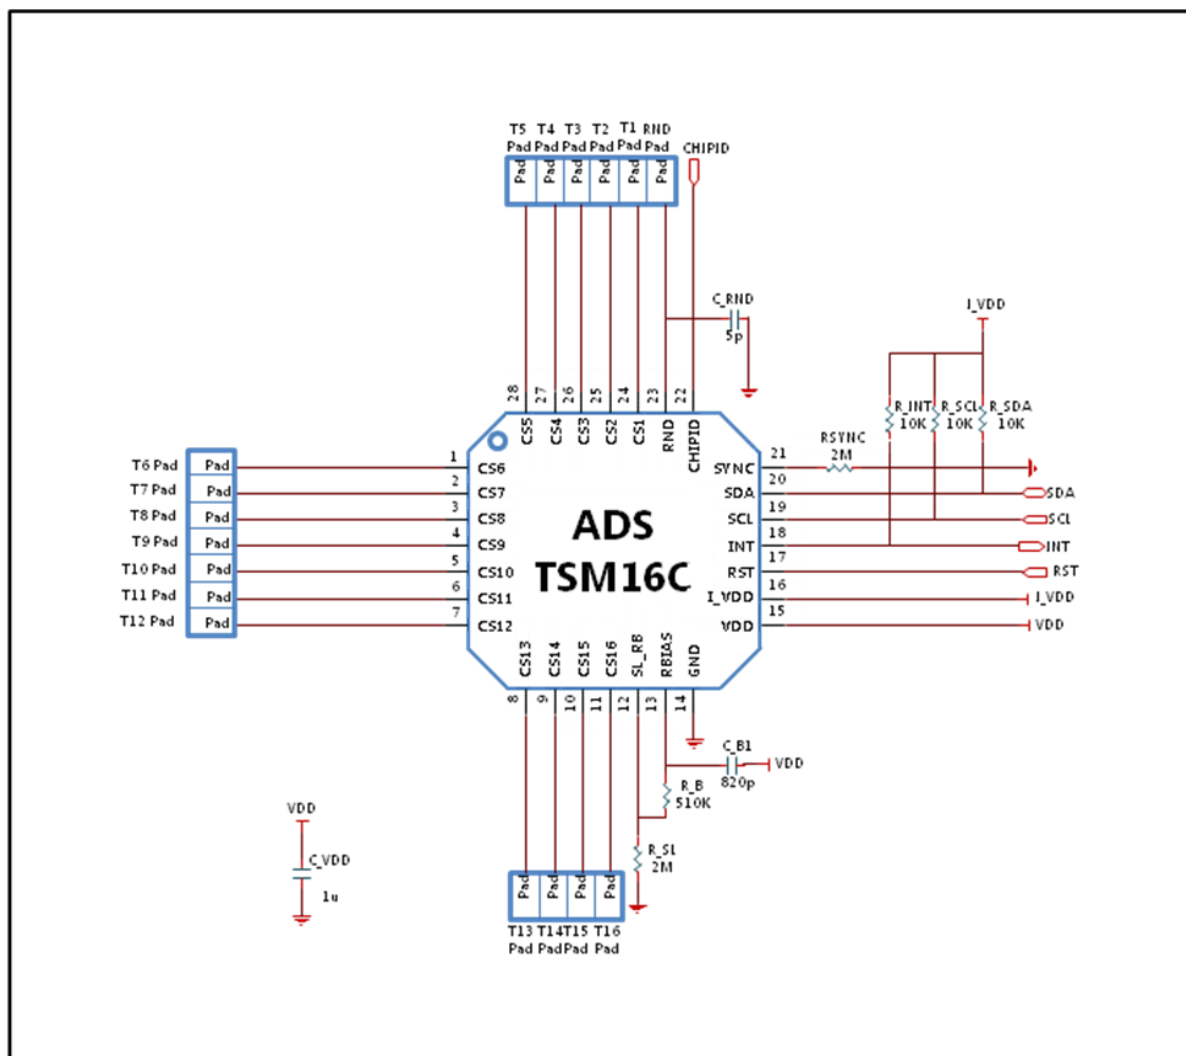

9 Recommended TSM16C Initialize Flow (Example)

TSM16C (16-CH Auto Sensitivity Calibration Capacitive Touch Sensor)

10 Recommended Circuit Diagram

10.1 Application Example in clean power environment

TSM16C Application Example Circuit (Clean power environment)

- ✓ In PCB layout, R_B should not be placed on touch pattern. If not, C_B has to be connected. The R_B pattern should be routed as short as possible.
- ✓ The CS patterns also should be routed as short as possible and the width of line might be about 0.25mm.
- ✓ The capacitor that is between VDD and GND is an obligation. It should be located as close as possible from TSM16C.
- ✓ The CS pattern routing should be formed by bottom metal (opposite metal of touch PAD).
- ✓ The empty space of PCB must be filled with GND pattern to strengthen GND pattern and to prevent external noise from interfere with sensing frequency.
- ✓ The TSM16C is reset if RST Pin is high. (See 6.5 Reset implementation chapter)
- ✓ The TSM16C is working with single output mode if the SYNC/OPT pin is high and it will be in multi output mode when it's low. The resistor which is connected with GND should be connected with SYNC pin when the application is required over two TSM16C devices (Multi output mode).

TSM16C (16-CH Auto Sensitivity Calibration Capacitive Touch Sensor)

10.2 Application Example in noisy environment

TSM16C Application Example Circuit (Noisy environment)

- ✓ The VDD periodic voltage ripple over 50mV and the ripple frequency is lower than 10 kHz can cause wrong sensitivity calibration. To prevent above problem, power (VDD, GND) line of touch circuit should be separated from other circuit. Especially LED driver power line or digital switching circuit power line certainly should be treated to be separated from touch circuit.
- ✓ The smaller R_B is recommended in noisy environments.
- ✓

TSM16C (16-CH Auto Sensitivity Calibration Capacitive Touch Sensor)

10.3 Example – Power Line Split Strategy PCB Layout

A. Not split power Line (Bad power line design)

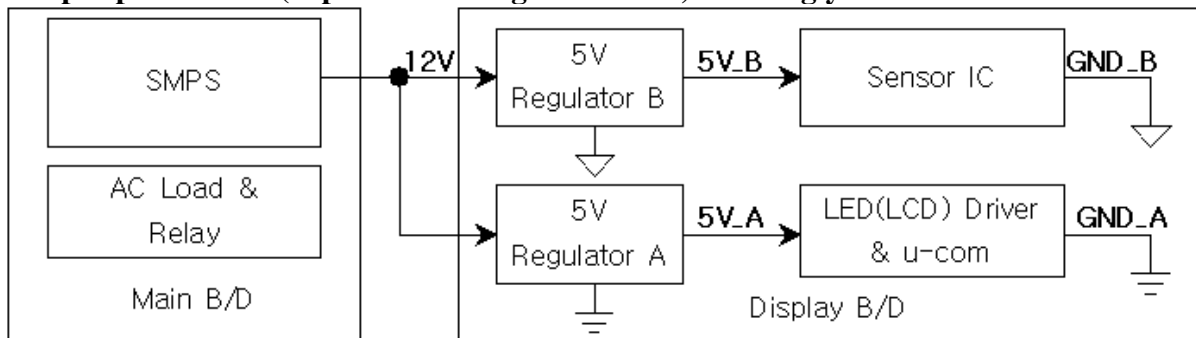

- ✓ The noise that is generated by AC load or relay can be loaded at 5V power line.
- ✓ A big inductance might be appeared in case of the connection line between main board and display board is too long, moreover the voltage ripple could be generated by LED (LCD) display driver at VDD (5V).

B. Split power Line (One 5V regulator used) – Recommended

C. Split power Line (Separated 5V regulator used) – Strongly recommended

11 MECHANICAL DRAWING

11.1 Mechanical Drawing of TSM16C (28 QFN)

AD Semiconductor®

" Free from Common Mode Noise "

NOTES :

- DIMENSIONING AND TOLERANCING CONFORME TO ASME Y14.5M – 1994.
- ALL DIMENSIONS ARE IN MILLIMETERS, θ IS IN DEGREES.
- N IS THE TOTAL NUMBER OF TERMINALS.
- 4 DIMENSION b APPLIES TO METALLIZED TERMINAL AND IS MEASURED BETWEEN 0.15 AND 0.30mm FROM TERMINAL TIP. IF THE TERMINAL HAS THE OPTIONAL RADIUS ON THE OTHER END OF THE TERMINAL, THE DIMENSION b SHOULD NOT BE MEASURED IN THAT RADIUS AREA.
- 5 ND AND NE REFER TO THE NUMBER OF TERMINALS ON EACH D AND E SIDE RESPECTIVELY.
- MAX. PACKAGE WARPAGE IS 0.05 mm.
- MAXIMUM ALLOWABLE BURRS IS 0.076 mm IN ALL DIRECTIONS.
- 8 PIN #1 ID ON TOP WILL BE LASER MARKED.
- 9 BILATERAL COPLANARITY ZONE APPLIES TO THE EXPOSED HEAT SINK SLUG AS WELL AS THE TERMINALS.
- 10 THIS DRAWING CONFORMES TO JEDEC REGISTERED OUTLINE MO-220
- 11 DEPENDING ON THE METHOD OF LEAD TERMINATION AT THE EDGE OF THE PACKAGE, PULLBACK (L1) MAYBE PRESENT
- 12 PULLBACK DESIGN OPTION IS FOR 0.50mm NOMINAL LANDLENGTH ONLY.

12 MARKING DESCRIPTION
