

IR Receiver Modules for 3D Synchronization Signals

20953

MECHANICAL DATA

Pinning:

1, 4 = GND, 2 = V_S , 3 = OUT

FEATURES

- Center frequency at 25 kHz to reduce interference with IR remote control signals at 30 kHz to 56 kHz
- Package can be used with IR emitters with wavelength 830 nm as well as standard 940 nm
- Very low supply current and stand-by mode
- Photo detector and preamplifier in one package
- Internal filter for PCM frequency
- Supply voltage range: 2.5 V to 5.5 V
- Improved immunity against modulated light sources
- Insensitive to supply voltage ripple and noise
- Taping available for topview and sideview assembly
- Compliant to RoHS directive 2002/95/EC and in accordance to WEEE 2002/96/EC

RoHS
COMPLIANT

DESCRIPTION

The TSOP75D25 is an SMD IR receiver module for 3D synchronisation signals. The receiver is designed to operate at a carrier frequency of 25 kHz and a wavelength of 830 nm to avoid interference with standard remote control systems at 940 nm and 30 kHz to 56 kHz. The TSOP75D25 can receive continuously transmitted signal patterns with a minimum burst length of 6 cycles and frame rates up to 200 Hz. The circuit provides good suppression of optical noise from CFLs, LCD backlight and plasma panels.

ABSOLUTE MAXIMUM RATINGS

PARAMETER	TEST CONDITION	SYMBOL	VALUE	UNIT
Supply voltage (pin 2)		V_S	- 0.3 to + 6	V
Supply current (pin 2)		I_S	3	mA
Output voltage (pin 3)		V_O	- 0.3 to ($V_S + 0.3$)	V
Output current (pin 3)		I_O	5	mA
Junction temperature		T_j	100	°C
Storage temperature range		T_{stg}	- 25 to + 85	°C
Operating temperature range		T_{amb}	- 25 to + 85	°C
Power consumption	$T_{amb} \leq 85$ °C	P_{tot}	10	mW

Note

- Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect the device reliability.

ELECTRICAL AND OPTICAL CHARACTERISTICS ($T_{amb} = 25$ °C, unless otherwise specified)

PARAMETER	TEST CONDITION	SYMBOL	MIN.	TYP.	MAX.	UNIT
Supply current (pin 2)	$E_v = 0$, $V_S = 3.3$ V	I_{SD}	0.27	0.35	0.45	mA
	$E_v = 40$ klx, sunlight	I_{SH}		0.45		mA
Supply voltage		V_S	2.5		5.5	V
Transmission distance	$E_v = 0$, test signal see fig. 1, IR diode TSAL6200, $I_F = 250$ mA	d		45		m
Output voltage low (pin 3)	$I_{OSL} = 0.5$ mA, $E_e = 0.7$ mW/m ² , test signal see fig. 1	V_{OSL}			100	mV
Minimum irradiance	Pulse width tolerance: $t_{pi} - 80 \mu s < t_{po} < t_{pi} + 160 \mu s$, test signal see fig. 1	$E_e \text{ min.}$		0.15	0.35	mW/m ²
Maximum irradiance	$t_{pi} - 80 \mu s < t_{po} < t_{pi} + 160 \mu s$, test signal see fig. 1	$E_e \text{ max.}$	30			W/m ²
Directivity	Angle of half transmission distance	$\phi_{1/2}$		± 50		deg

TYPICAL CHARACTERISTICS ($T_{amb} = 25$ °C, unless otherwise specified)

SUITABLE DATA FORMAT

The TSOP75D25 is designed to suppress spurious output pulses due to noise or disturbance signals. Data and disturbance signals can be distinguished by the devices according to carrier frequency, burst length and envelope duty cycle. The data signal should be close to the band-pass center frequency (e.g. 25 kHz) and fulfill the conditions in the table below.

When a data signal is applied to the TSOP75D25 in the presence of a disturbance signal, the sensitivity of the receiver is reduced to insure that no spurious pulses are present at the output. Some examples of disturbance signals which are suppressed are

- DC light (e.g. from tungsten bulb or sunlight)
- Continuous signals at any frequency
- Strongly or weakly modulated noise from fluorescent lamps with electronic ballasts (see figure 15 or figure 16)

Fig. 15 - IR Signal from Fluorescent Lamp with Low Modulation

Fig. 16 - IR Signal from Fluorescent Lamp with High Modulation

	TSOP75D25
Minimum burst length	6 cycles/burst
After each burst of length a minimum gap time is required of	6 to 24 cycles ≥ 6 cycles
For bursts greater than a minimum gap time in the data stream is needed of	24 cycles > 4 x burst length
Maximum rate of short bursts (constant irradiance)	2000 bursts/s
Maximum rate of short bursts (variable irradiance)	220 bursts/s

STAND-BY MODE OF THE TSOP75D25

If an application requires an ultra low average supply current in order to save battery life, the TSOP75D25 can be operated with an intermittent supply voltage. A typical application circuit shown in fig. 17.

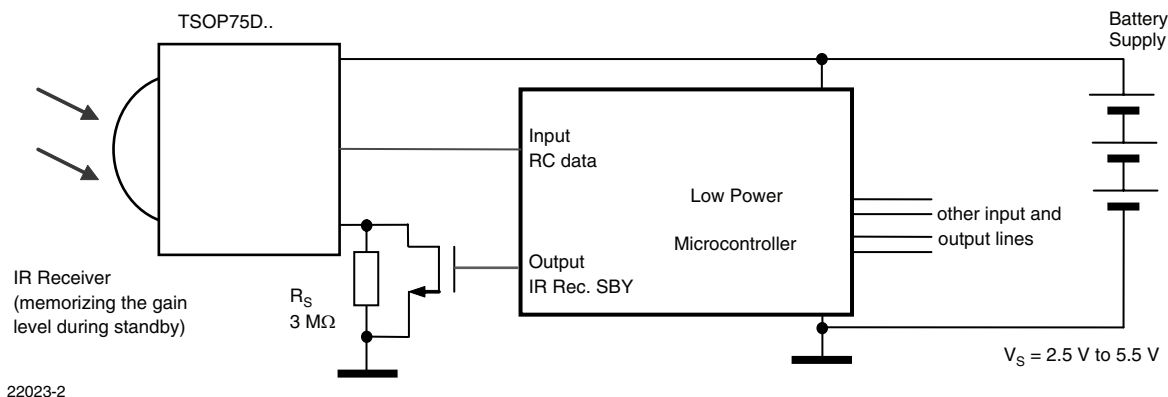

Fig. 17 - Application Circuit for the TSOP75D25 with Intermittent Supply Voltage

To receive a continuous data signal while using the TSOP75D25 with an intermittent supply voltage, the receiver must be activated in advance of the expected data frame as shown in figure 18.

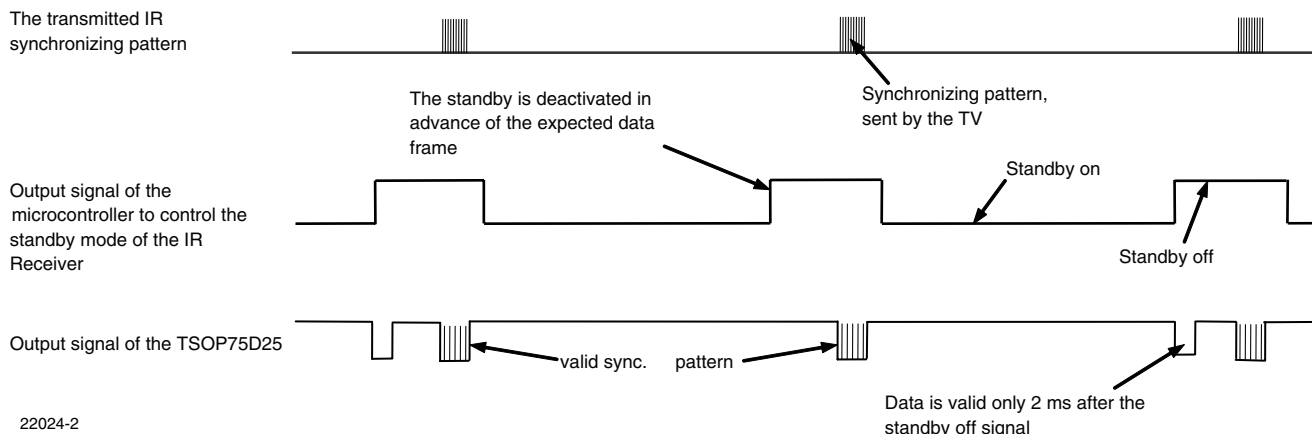

Fig. 18 - Signal Timing in Power Saving Mode with Continuous Receiving Function

In normal operation without using the stand-by feature, the gain level of the TSOP75D25 returns to a default level after the device is disconnected from supply voltage and reconnected again. A settling time of up to 100 ms is necessary until the gain has settled to an optimum level that is well matched to the ambient noise level.

Using the device in stand-by mode, the TSOP75D25 memorizes its gain setting while in standby. On re-activation, the gain immediately returns to the correct level present before stand-by. This operation insures that there are no spurious pulses on power-up due to mismatch between the gain level and the ambient light conditions.

ELECTRICAL AND OPTICAL CHARACTERISTICS ($T_{amb} = 25\text{ }^{\circ}\text{C}$, unless otherwise specified)

PARAMETER	TEST CONDITION	SYMBOL	MIN.	TYP.	MAX.	UNIT
Serial resistor to activate the standby mode	$V_S = 3\text{ V}$	R_S	1.2	1.5	2	$M\Omega$
	$V_S = 5\text{ V}$	R_S	2	3	4	
Standby supply current	$V_S = 3\text{ V}$, $R_S = 1.5\text{ M}\Omega$	I_{SBY}	1	1.4	2	μA
	$V_S = 5\text{ V}$, $R_S = 3\text{ M}\Omega$	I_{SBY}	1	1.4	2	
Latency time for standby-off (delay until there is a valid response)	$V_S > 2.5\text{ V}$, dark ambient, output is valid	t_{delay}		0.4	0.8	ms
	$V_S > 2.5\text{ V}$, 10 kLux daylight, output is valid	t_{delay}		1.5	2.5	
Duration of standby-off period	$V_S > 2.5\text{ V}$, dark ambient	t_{SBY_OFF}	1			ms
	$V_S > 2.5\text{ V}$, 10 kLux daylight, AGC1 or AGC3 device	t_{SBY_OFF}	4			
	$V_S > 2.5\text{ V}$, 10 kLux daylight, AGC2 or AGC4 device	t_{SBY_OFF}	3			

TYPICAL CHARACTERISTICS ($T_{amb} = 25\text{ }^{\circ}\text{C}$, unless otherwise specified)

ASSEMBLY INSTRUCTIONS

Reflow Soldering

- Reflow soldering must be done within 72 h while stored under a max. temperature of 30 °C, 60 % RH after opening the dry pack envelope
- Set the furnace temperatures for pre-heating and heating in accordance with the reflow temperature profile as shown in the diagram. Exercise extreme care to keep the maximum temperature below 260 °C. The temperature shown in the profile means the temperature at the device surface. Since there is a temperature difference between the component and the circuit board, it should be verified that the temperature of the device is accurately being measured
- Handling after reflow should be done only after the work surface has been cooled off

Manual Soldering

- Use a soldering iron of 25 W or less. Adjust the temperature of the soldering iron below 300 °C
- Finish soldering within 3 s
- Handle products only after the temperature has cooled off

LABEL
Standard bar code labels for finished goods

The standard bar code labels are product labels and used for identification of goods. The finished goods are packed in final packing area. The standard packing units are labeled with standard bar code labels before transported as finished goods to warehouses. The labels are on each packing unit and contain Vishay Semiconductor GmbH specific data.

DRY PACKING

The reel is packed in an anti-humidity bag to protect the devices from absorbing moisture during transportation and storage.

In case of moisture absorption, the devices will recover to the former condition by drying under the following condition:
 192 h at 40 °C + 5 °C/- 0 °C and < 5 % RH (dry air/nitrogen)
 or
 96 h at 60 °C + 5 °C and < 5 % RH for all device containers
 or
 24 h at 125 °C + 5 °C not suitable for reel or tubes.
 An EIA JEDEC standard JESD22-A112 level 4 label is included on all dry bags.

FINAL PACKING

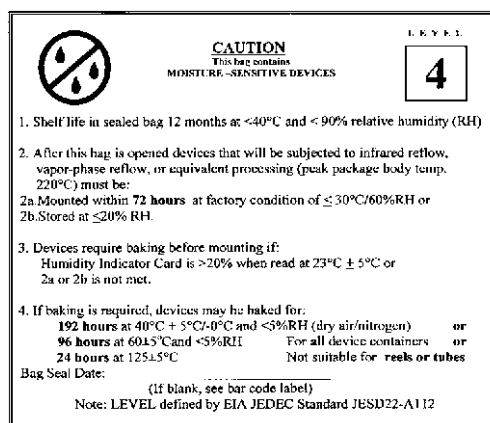

The sealed reel is packed into a cardboard box. A secondary cardboard box is used for shipping purposes.

RECOMMENDED METHOD OF STORAGE

Dry box storage is recommended as soon as the aluminum bag has been opened to prevent moisture absorption. The following conditions should be observed, if dry boxes are not available:

- Storage temperature 10 °C to 30 °C
- Storage humidity ≤ 60 % RH max.

After more than 72 h under these conditions moisture content will be too high for reflow soldering.

16943

Example of JESD22-A112 level 4 label

**ESD PRECAUTION**

Proper storage and handling procedures should be followed to prevent ESD damage to the devices especially when they are removed from the antistatic shielding bag. Electro-static sensitive devices warning labels are on the packaging.

**VISHAY SEMICONDUCTORS STANDARD
BAR CODE LABELS**

The Vishay Semiconductors standard bar code labels are printed at final packing areas. The labels are on each packing unit and contain Vishay Semiconductors specific data.
