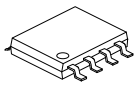
ULV333

CMOS IC

MICRO-POWER, ZERO-DRIFT, RAIL-TO-RAIL INPUT/OUTPUT CMOS SINGLE OPERATIONAL AMPLIFIERS



SOP-8

■ DESCRIPTION

The UTC **ULV333** CMOS single operational amplifiers provide very low offset voltage and zero-drift over time and temperature.

The miniature, high precision, low quiescent current amplifiers offer high-impedance inputs that have a wide input common mode range of 100mV beyond the rails and rail-to-rail output that swings within 35mV of the rails. Single or dual supplies as low as 1.8V (±0.9V) and up to 5.5V (±2.75V) may be used. They are optimized for low voltage, single or dual supply operation.

The UTC **ULV333** offers excellent CMRR without the crossover associated with traditional complementary input stages. This design results in superior performance for driving analog-to-digital converters (ADCs) without degradation of differential linearity.
