

Single Line ESD Protection Diode Array UM5059T TDFN2 1.0×0.6

General Description

The UM5059T ESD protection diode is designed to replace multilayer varistors (MLVs) in portable applications such as cell phones, notebook computers, and PDA's. They feature large cross-sectional area junctions for conducting high transient currents, offer desirable electrical characteristics for board level protection, such as fast response time, lower operating voltage, lower clamping voltage and no device degradation when compared to MLVs. The UM5059T ESD protection diode protects sensitive semiconductor components from damage or upset due to electrostatic discharge (ESD) and other voltage induced transient events. The UM5059T is available in TDFN2 1.0×0.6 (compatible with SOD923 & SOD882) package with working voltages of 5 volt. It gives designer the flexibility to protect one unidirectional line in applications where arrays are not practical. Additionally, it may be "sprinkled" around the board in applications where board space is at a premium. It may be used to meet the ESD immunity requirements of IEC 61000-4-2, ±30kV air, ±30kV contact discharge.

Applications

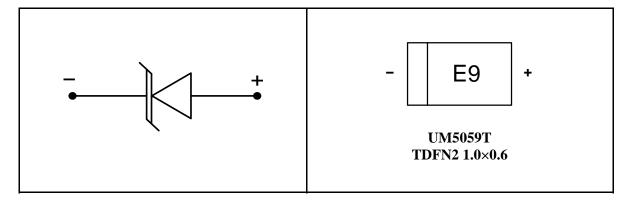

- Cell Phone Handsets and Accessories
- Personal Digital Assistants (PDA's)
- Notebooks, Desktops and Servers
- Portable Instrumentation
- Cordless Phones
- Digital Cameras
- Peripherals
- MP3 Players

Features

- Transient Protection for Data Lines to IEC 61000-4-2 (ESD) ±30kV (Air), ±30kV (Contact)
- Small Package for Use in Portable Electronics
- Suitable Replacement for MLV's in ESD Protection Applications
- Protect One I/O or Power Line
- Low Clamping Voltage
- Stand-off Voltages: 5V
- Low Leakage Current
- Solid-State Silicon-Avalanche Technology
- Small Body Outline Dimensions: 1.0mm×0.6mm

Ordering Information

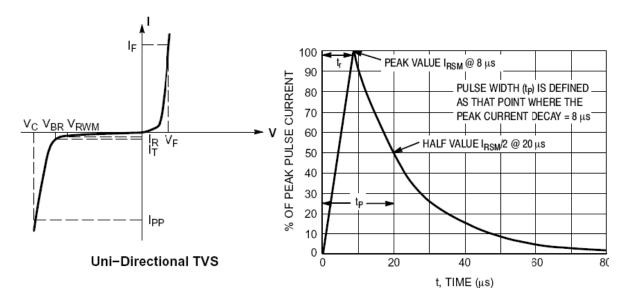

Part Number	Working Voltage	Packaging Type	Channel	Marking Code	Shipping Qty
UM5059T	5.0V	TDFN2 1.0×0.6	1	Е9	5000pcs/7 Inch Tape & Reel

Absolute Maximum Ratings

Rating	Symbol	Value	Unit
Peak Pulse Power (t _P =8/20μs)	P_{PK}	140	Watts
Maximum Peak Pulse Current (t _P =8/20μs)	I_{PP}	11	Amps
Lead Soldering Temperature	$T_{ m L}$	260 (10 sec.)	°C
Operating Temperature	T_{J}	-55 to +125	°C
Storage Temperature	T_{STG}	-55 to +150	°C

Symbol Definition

Parameter	Symbol
Maximum Reverse Peak Pulse Current	$ m I_{PP}$
Clamping Voltage @ Ipp	$V_{\rm C}$
Working Peak Reverse Voltage	$ m V_{RWM}$
Maximum Reverse Leakage Current @ V _{RWM}	I_R
Breakdown Voltage @ I _T	$ m V_{BR}$
Test Current	I_t
Forward Current	I_{F}
Forward Voltage @ I _F	$ m V_{F}$
Peak Power Dissipation	P_{PK}
Max. Capacitance @ V _R =0V, f=1MHz	C

Electrical Characteristics

(T=25°C, Device for 5.0V Reverse Stand-off Voltage)

Parameter	Symbol	Conditions	Min	Тур	Max	Unit
Reverse Stand-Off Voltage	V_{RWM}				5	V
Reverse Breakdown Voltage	V_{BR}	I _T =1mA	6	6.8	7.8	V
Reverse Leakage Current	I_R	V _{RWM} =5V, T=25°C			0.1	μΑ
Clamping Voltage	$V_{\rm C}$	$I_{PP}=5A, t_{P}=8/20\mu s$			9.1	V
		$I_{PP}=11A, t_{P}=8/20 \mu s$			13	v
Forward Voltage	V_{F}	I _F =10mA		0.8		V
Junction Capacitance	C_{J}	$V_R=0V$, $f=1MHz$		60	75	pF
Junction Capacitance	C_{J}	V_R =2.5V, f=1MHz		40	50	pF

Applications Information

Device Connection Options

UM5059T ESD protection diode is designed to protect one data, I/O, or power supply line. The device is unidirectional and may be used on lines where the signal polarity is above ground. The cathode dot should be placed towards the line hat is to be protected.

Circuit Board Layout Recommendations for Suppression of ESD

Good circuit board layout is critical for the suppression of ESD induced transients. The following guidelines are recommended:

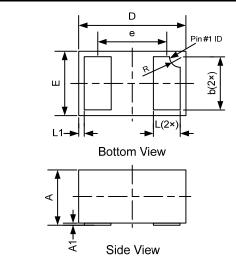

- 1. Place the TVS near the input terminals or connectors to restrict transient coupling.
- 2. Minimize the path length between the TVS and the protected line.
- 3. Minimize all conductive loops including power and ground loops.
- 4. The ESD transient return path to ground should be kept as short as possible.
- 5. Never run critical signals near board edges.
- 6. Use ground planes whenever possible. For multilayer printed-circuit boards, use ground vias.
- 7. Keep parallel signal paths to a minimum.
- 8. Avoid running protection conductors in parallel with unprotected conductor.
- 9. Minimize all printed-circuit board conductive loops including power and ground loops.
- 10. Avoid using shared transient return paths to a common ground point.

GREEN COMPLIANCE

Union Semiconductor is committed to environmental excellence in all aspects of its operations including meeting or exceeding regulatory requirements with respect to the use of hazardous substances. Numerous successful programs have been implemented to reduce the use of hazardous substances and/or emissions.

All Union components are compliant with the RoHS directive, which helps to support customers in their compliance with environmental directives. For more green compliance information, please visit:
