USB1101 USB 2.0 FS Peripheral Transceiver (Preliminary)

FAIRCHILD

SEMICONDUCTOR TM

June 2005 Revised June 2005

USB1101 USB 2.0 FS Peripheral Transceiver (Preliminary)

General Description

The USB1101 provides a USB FS Transceiver functionality with voltage level translation that is compliant to USB Specification Rev 2.0. The device allows interfacing of USB Application specific devices with supply voltages ranging from 1.65V to 3.6V with the physical layer of Universal Serial Bus. It is capable of operating at 12Mbits/s (full speed) data rates and hence is fully compliant to USB Specification Rev 2.0. It supports the DAT_VP/SE0_VM interface on the host side but offers reduced pin count and package size. The USB1101 has host side supply rail for 1.65V to 3.6V.

Features

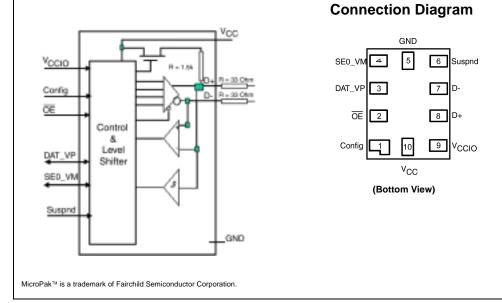

- Complies with USB Specification Rev 2.0
- Supports DAT_VP/SE0_VM host mode
- Utilizes digital inputs and outputs to transmit and receive USB cable data
- Supports full speed (12Mbits/s) data rates
- Ideal for portable electronic devices
- MicroPak[™] technology package (10 pin) 1.6mm x 2.1mm
- Host side V_{CCIO} 1.65V to 3.6V

Applications

- PDA
- PC Peripherals
- Cellular Phones
- MP3 Players
- Digital Cameras
- Information Appliance

USB1101

Pin Number	Pin Name	I/O	Pin Description
1	Config	Ι	USB connect or disconnect software control input. Configures 3.3V to internal $1.5k\Omega$ resistor on D+ when HIGH. If device is used as Downstream port then this pin is hard-wired to GND.
2	ŌĒ	I	Output Enable (active LOW) When \overrightarrow{OE} = L transmit mode is enabled When \overrightarrow{OE} = H receive mode (CMOS level is relative to V _{CCIO}) is enabled.
3	DAT_VP	I/O	When in transmit mode (Note 2) DAT_VP is a single-ended host data input (CMOS level relative to V_{CCID}).When in receive mode (Note 1) and Suspnd = L DAT_VP is a single ended data output comprised of the differential input data from the D+/D- inputs (see Table 2);When in receive mode (Note 1) with Suspnd = H DAT_VP outputs the D+ data. (see Table 1 and Table 2) Output drive is 2mA (min) buffer
4	SE0_VM	I/O	When in transmit mode ^(Note 2) SE0_VM is a data input (CMOS level relative to V_{CCIO}). When in receive mode ^(Note 1) and Suspnd = L, SE0_VM is used as an output (see Table 2) (see Table 1 and Table 2). Output drive is 4ma (min) buffer
5	GND	GND	GND
6	Suspnd	Ι	Enables a low power state (CMOS level is relative to V_{CCIO}). In receive mode ^(Note 1) with Suspnd = L the DAT_VP pin will be a function of the D+/D- lines. In receive mode ^(Note 1) with Suspnd = H DAT_VP will have the value of D-such that the device can still monitor out-of-suspend signaling.
7, 8	D-, D+	AI/O	Data+, Data Differential data bus conforming to the USB standard
9	V _{CCIO}	Pwr	Supply Voltage for host side digital I/O pins (1.65V to 3.6V)
10	V _{CC}	Pwr	Supply Voltage Input (3.0V to 3.6V)

Note 1: $\overline{OE} = H$

Note 2: $\overline{OE} = L$

Functional Description

The USB1101 transceiver is designed as an Upstream facing port device to convert CMOS data into USB differential bus signal levels and to convert USB differential bus signal to CMOS data. If you wish to use these as downstream devices, Config must be hard-wired to GND.

To minimize EMI and noise the outputs are edge rate controlled with the rise and fall times controlled and defined for full speed data rates only (12Mbits/s). The rise and fall times are balanced between the differential pins to minimize skew. The USB1101 supports the DAT_VP/SE0_VM format from the OTG Transceiver Specification using the DAT_SE0 Mode. Table 1 describes the specific pin functionality selection and Table 2 describes the specific Truth Tables for Driver, Receiver, and Suspended operating functions.

The USB1101 has the capability of serving Self Powered power supply configurations only but interfaces to mixed voltage supply applications.

TABLE 1. Function Select

Suspnd	OE	D+, D-	DAT_VP	SE0_VM	Function
L	L	Transmitting	Host Data Input	SE0_VM Host Input	Normal Driving
L	Н	Receiving (Note 3)	D+, D- Diff Output	SE0_VM Output	Receiving
Н	L	Transmitting (Note 4)	Host Data Input	SE0_VM Host Input	Driving while Suspended
Н	Н	Driver is 3-STATE (Note 4)	DAT_VP Output	SE0_VM Output	Suspended (Internal Low Power Mode)

 $\label{eq:Note 3: Signal levels is function of connection, Config and/or pull-up/pull-down resistors.$

Note 4: For Suspnd = HIGH mode the differential receiver is inactive.

Suspnd = L		Transn	nit Mode		
	Inputs		Outp	outs	
OE	DAT VP	SEO_VM	D+	D-	
L		L	L	Н	Differential Logic 0
L	Н	L	Н	L	Differential Logic 1
L	L	Н	L	L	SE0
L	Н	Н	L	L	SE0
Suspnd = L		Receiv	/e Mode		
	Inputs		Outp	outs	
OE	D+	D-	DAT_VP	SEO_VM	
Н	L	L	DIFF (Note 5)	Н	
Н	Н	L	Н	L	
Н	L	Н	L	L	
Н	Н	Н	DIFF (Note 5)	L	
Suspnd = L		Receiv	ve Mode		While Suspended
	Inputs		Outp	outs	
OE	D+	D	DAT_VP	SEO_VM	
Н	L	L	L (Note 6)	Н	
Н	Н	L	H (Note 6)	L	
Н	L	Н	L (Note 6)	L	
Н	Н	Н	H (Note 6)	L	
Suspnd = H		Transn	nit Mode		
	Inputs		Outp	outs	
OE	DAT_VP	SEO_VM	D+	D-	
L	L	L	L	Н	Differential Logic 0
L	Н	L	Н	L	Differential Logic 1
L	L	Н	L	L	SE0
L	Н	Н	L	L	SE0

Note 5: DIFF denotes that the output of the differential receiver is output via DAT_VP when Suspnd = L. This output should also not be gated by the SE0 or SE1 condition when a skew between D+ and D- signals could result in the short SE0 or SE1 conditions. Please refer to Expectation Notes for further information.

Note 6: This is the internal single ended output that is output on to DAT_VP when Suspnd = H and in receive mode.

Power Supply Configurations and Options

The modes of power supply operation include:

- Self Powered Mode: V_{CC} is connected to 3.3V source (3.0V to 3.6V). This external supply connection provides the 3.3V for the USB pull-up source, the receiver input and driver output circuitry.
- 2. Sharing Mode: V_{CCIO} is connected and V_{CC} is \leq 0.8V. In this mode the D+ and D- pins are 3-STATE and the USB1101 allows external signals up to 3.6V to share

the D+ and D- bus lines. Internally the circuitry limits leakage from D+ and D- pins (maximum 10 $_{\mu}A)$ and V_{CCIO} such that the device is in low power state.

- 3. Disable Mode: V_{CCIO} is \leq 0.5V and V_{CC} is connected. In this mode the D+ and D- pins are 3-STATE and the device is in low power state.
- A summary of the Supply Configuration is described in Table 3.

TABLE 3. Power Supply Configuration Options

Pin	Po	wer Supply Mode Configurat	ion

DC Electrical Characteristics (Supply Pins) Over recommended range of supply voltage and
operating free air temperature (unless otherwise noted): V_{CC} = 3.0V to 3.6V, V_{CCIO} = 1.65V to 3.6V

USB1101

Symbol	Parameter	Conditions	Temperature = -40°C to + 85°C			Units
			Min	Тур	Max	
I _{CC}	Operating Supply Current (V _{CC})	Transmitting and receiving at 12Mbit/s;		4.0	8.0	mA
		$C_{LOAD} = 50 pF (D+, D-)$				
I _{CC(IDLE)}	Supply Current During FS IDLE and	IDLE: $V_{D+} \ge 2.7, V_{D-} \le 1.3V;$			300	μA
	SE0 (V _{CC})	SE0: $V_{D+} \leq 0.3V, ~V_{D-} \leq 1.3V$			(Note 14)	
I _{CC(DISABLE)}	Disabled Supply Current	Suspnd = H or L; OE = H or L;			20.0	μA
,		Config = L				
		D+ = D- = DAT_VP = SE0_VM = H or L				
		$V_{CCIO} = \leq 0.3V$				
ICC(SUSPNDR)	Suspend V _{CC} Supply Current	Suspnd = OE = Config = H			40.0	μA
	(Internal Resistor Pull-up)	D+ = Open				
ICCIO(STATIC)	I/O Static V _{CCIO} Supply Current	IDLE, SE0			20.0	μA
ICCIO(SHARING)	I/O Sharing Mode V _{CCIO} Supply Current	V_{CC} Not Connected or $\leq 0.5 V$ or $0 V$			20.0	μA
ICCIO(SUSPNDR)	Suspend V _{CCIO} Supply Current	Suspnd = Config = HIGH;			20.0	μA
		OE = HIGH or LOW D+ = Open				
I _{D±(SHARING)}	Sharing Mode Load Current on D+, D- Pins	V_{CC} Not Connected or $\leq 0.8V$	-10.0		10.0	μA
		Config = LOW; $V_{D\pm}$ = 3.6V				
V _{CCTH}	V _{CC} Threshold Detection Voltage	$3.0 \leq V_{CC} \leq 3.6 V$				
	(Self Powered)	Supply Lost			0.8	v
		Supply Present	2.4 (Note 15)			
V _{CCHYS}	V _{CC} Threshold Detection Hysteresis Voltage	V _{CCIO} = 1.8V		450		m۷
V _{CCIOTH}	V _{CCIO} Threshold Detection Voltage	$3.0V \le V_{CC} \le 3.6V$				
		Supply Lost			0.5	V
		Supply Present	1.4			
V _{CCIOHYS}	V _{CCIO} Threshold Detection Hysterias Voltage	V _{CC} = 3.3V		450		m\

Note 13: Not tested in production, value based on characterization.

Note 14: Excludes any current from load and V_{SW} current to the 1.5k Ω and 15k Ω pull-up/pull-down resistors (200 μ A typ).

Note 15: Minimum value for V_{CCTH} = 2.0V for supply present condition for V_{CCIO} = 1.8V.

USB1101
