

UTC2003

LINEAR INTEGRATED CIRCUIT

### 10W CAR RADIO AUDIO AMPLIFIER

#### DESCRIPTION

The UTC2003 has improved performance with the same pin configuration as the UTC2002. The additional features of UTC2002, very low number of external components, ease of assembly, space and cost saving, are maintained.

The device provides a high output current capacity (up to 3.5A) very low harmonic and crossover distortion. Completely safe operation is guaranteed due to protection against DC and AC short circuit between all pins and ground, thermal over-range, load dump voltage surge up to 40V and fortuitous open ground.

#### ABSOLUTE MAXIMUM RATINGS (Ta=25°C)

CHARACTERISTICS	SYMBOL	VALUE	UNITS
Peak Supply Voltage	Vs	40	V
DC supply Voltage	Vs	28	V
Operating supply voltage	Vs	18	V
Output peak current (repetitive)	Io	3.5	A
Output peak current (non repetitive)	Io	4.5	A
Power dissipation at Tcase=90°C	Ptot	20	W
Storage temperature	Tstg	-40~+150	°C
junction temperature	Tj	-40~+150	°C

#### PIN CONNECTION

- 1 Non inverting input
- 2 Inverting input
- 3 Ground
- 4 Output
- 5 Supply Voltage

## SCHEMATIC DIAGRAM

## TEST CIRCUIT

DC Test Circuit

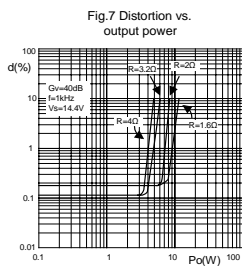

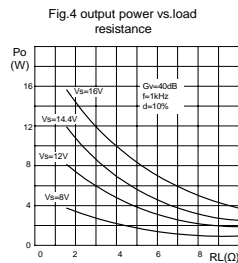

AC Test Circuit

**ELECTRICAL CHARACTERISTICS**(Refer to the test circuit,  $V_s=14.4V, T_a=25^\circ C$ )

PARAMETER	SYMBOL	TEST CONDITIONS	MIN	TYP	MAX	UNIT
<b>DC CHARACTERISTICS</b>						
Supply Voltage	$V_s$		8		18	V
Quiescent Output Voltage	$V_o$		6.1	6.9	7.7	V
Quiescent drain current	$I_d$			44	50	mA
<b>AC CHARACTERISTICS</b>						
Output power	$P_o$	$d=10\%, f=1kHz$				W
		$R_L=4\Omega$	5.5	6		
		$R_L=2\Omega$	9	10		
		$R_L=3.2\Omega$		7.5		
Input sensitivity	$V_i$	$f=1kHz$				mV
		$P_o=0.5W, R_L=4\Omega$		14		
		$P_o=6W, R_L=4\Omega$		55		
		$P_o=0.5W, R_L=2\Omega$		10		
Input saturation voltage	$V_i(rms)$		300			mV
Frequency response(-3dB)	B	$P_o=1W, R_L=4\Omega$	40		15000	Hz
Distortion	D	$f=1kHz$				%
		$P_o=0.05$ to $4.5W, R_L=4\Omega$		0.15		
		$P_o=0.05$ to $7.5W, R_L=2\Omega$		0.15		

(continued)

PARAMETER	SYMBOL	TEST CONDITIONS	MIN	TYP	MAX	UNIT
Input Resistance (pin 1)	R <sub>i</sub>	open loop, f=1kHz	70	150		kΩ
Input noise current	e <sub>N</sub>			60	200	pA
Input noise voltage	I <sub>N</sub>			1	5	μV
open loop voltage gain	G <sub>vo</sub>	f=1kHz		80		dB
		f=10kHz		60		dB
closed loop voltage gain	G <sub>vc</sub>	f=1kHz, R <sub>L</sub> =4Ω	39.3	40	40.3	dB
Efficiency	η	f=1kHz P <sub>o</sub> =6W, R <sub>L</sub> =4Ω		69		%
		P <sub>o</sub> =10W, R <sub>L</sub> =2Ω		65		%
Supply voltage rejection	SVR	f=100Hz, V <sub>ripple</sub> =0.5V R <sub>g</sub> =10kΩ, R <sub>L</sub> =4Ω	30	36		dB

APPLICATION INFORMATION

Fig 16 Typical application circuit

The Values of the capacitors C3 and C4 are different to optimize the SVR(Typ. 40dB)

Fig.20 Low cost bridge configuration application circuit(Po=18W)

**BUILT-IN PROTECTION SYSTEMS**

**Load dump voltage surge**

The UTC2003 has a circuit which enables it to withstand a voltage pulse train, on pin 5, of the type shown in Fig. 23. If the supply voltage peaks to more than 40V, then an LC filter must be inserted between the supply and pin 5, in order to assure that the pulses at pin 5 will be head within the limits shown in Fig.22.

A suggested LC network is shown in Fig.23. With this network, a train of pulses with amplitude up to 120V and width of 2ms can be applied at point A. This type of protection is ON when the supply voltage(pulsed or DC) exceeds 18V. For this reason the maximum operating supply voltage is 18V.

### Short Circuit (AC and DC Conditions)

The UTC2003 can withstand a permanent short-circuit on the output for a supply voltage up to 16V.

### Polarity inversion

High current (up to 5A) can be handled by the device with no damage for a longer period than the blow-out time of a quick 1A fuse (normally connected in series with the supply).

The feature is added to avoid destruction if, during fitting to the car, a mistake on connection of the supply is made.

### Open ground

When the radio is in the ON condition and the ground is accidentally opened, a standard audio amplifier will be damaged. On the UTC2003 protection diodes are included to avoid any damage.

### Inductive load

A protection diode is provided between pin 4 and pin 5 (see the internal schematic diagram) to allow use of the UTC2003 with inductive loads. In particular, the UTC2003 can drive a coupling transformer for audio modulation.

### DC voltage

The maximum operating DC voltage on the UTC2003 is 18V.

However the device can withstand a DC voltage up to 28V with no damage. This could occur during winter if two batteries were series connected to crank the engine.

### Thermal shut-down

The presence of a thermal limiting circuit offers the following advantages:

- 1). an overload on the output (even if it is permanent), or an excessive ambient temperature can be easily withstood.
- 2). the heat-sink can have a smaller factor compared with that of a conventional circuit. There is no device damage in case of excessive junction temperature: all that happens is that  $P_o$  (and there  $P_{tot}$ ) and  $I_d$  are reduced.

**APPLICATION SUGGESTION**

The recommended values of the components are those shown on application circuit of Fig.16. Different values can be used. The following table can help the designer.

Component	Recommended value	Purpose	Large than recommended value	Large than recommended value
R1	$(Gv-1)*R2$	gain setting.		increase of Gain
R2	2.2Ω	gain and SVR setting.	Decrease of SVR	
R3	1Ω	Frequency stability	Danger of oscillation at high frequencies with inductive loads.	
Rx	$\approx 20*R2$	Upper frequency cutoff	Poor high frequencies attenuation	Dange of oscillation
C1	2.2μF	Input DC decoupling		Noise at switch-on switch-off
C2	470μF	Ripple rejection		Decrease of SVR
C3	0.1μF	Supply voltage bypass		Dange of oscillation
C4	1000μF	Output coupling to load		Higher low frequency cutoff
C5	0.1μF	Frequency stability		Danger of oscillation at high frequencies with inductive loads.
Cx	$\approx/(2 \pi*B*R1)$	Upper frequency cutoff	smaller bandwidth	Larger bandwidth
