# **1. GENERAL DESCRIPTION**

### **1.1 OVERVIEW**

V236BJ1-PE1 is a 23.6" TFT Liquid Crystal Display product with driver ICs and 1ch-LVDS interface. This product supports 1366 x 768 HDTV format and can display 16.7M colors (8-bit). The backlight unit is not built in.

### **1.2 FEATURES**

CHARACTERISTICS ITEMS	SPECIFICATIONS		
Screen Diagonal [in]	23.6		
Pixels [lines]	1366 × 768		
Active Area [mm]	521.4705 (H) × 293.184 (V) (23.6" diagonal)		
Sub-Pixel Pitch [mm]	0.12725 (H) × 0.38175 (V)		
Pixel Arrangement	RGB Vertical Stripe		
Weight [g]	670 Typ. (g)		
Physical Size [mm]	535.06 × 307.34 × 1.83 Typ.		
Display Mode	Transmissive Mode / Normallly Black		
Combract Datio	Тур.3000:1		
Contrast Ratio	(Typical value measure by INX's Module)		
Glass thickness (Array / CF) [mm]	0.7 / 0.7		
Viewing Angle (CB>20)	Typ. +88/-88(H), +88/-88(V) (CR≧20)		
Viewing Angle (CR>20)	(Typical value measured by INX's module)		
	R = (0.653, 0.327)		
	G = (0.276, 0.598)		
Color Chromaticity	$\mathbf{B} = (0.133, 0.112)$		
	W= (0.308, 0.350)		
	* Please refer to "color chromaticity" in 7.2		
Cell Transparency [%]	5.3%		
	* Please refer to "Transmittance" in 7.2		
Polarizer Surface Treatment	Anti-Glare coating (Haze 1%)		
Rotation Function	Unachievable		
Display Orientation	Signal input with "INX"		

X+C Board

item	Symbol	Min.	Max.	Unit	Note
Storage Temperature	TST	-20	+60	°C	(1) With INX Module
Operating Ambient Temperature	TOP	0	50	°C	(1), (2) With INX Module

Note (1) Temperature and relative humidity range is shown in the figure below.

(a) 90 % RH Max. (Ta  $\leq 40 \,^{\circ}$ C).

(b) Wet-bulb temperature should be 39 °C Max. (Ta > 40 °C).

(c) No condensation.

Note (2) Thermal management should be considered in final product design to prevent the surface temperature of display area from being over 65 °C. The range of operating temperature may degrade in case of improper thermal management in final product design.

# 5.4 FLICKER (Vcom) ADJUSTMENT

(1) Adjustment Pattern :

The adjustment pattern is shown as below. If customer needs below pattern, please directly contact with INX account FAE.

(2) Adjustment method: (Digital V-com)

Programmable memory IC is used for Digital V-com adjustment in this model. INX provide Auto Vcom tools to adjust Digital V-com. The detail connection and setting instruction, please directly contact with Account FAE or refer INX Auto V-com adjustment OI. Below items is suggested to be ready before Digital V-com adjustment in customer LCM line.

- a. USB Sensor Board.
- b. Programmable software.
- c. Document: Auto V-com adjustment suggestion OI.

**INNOLUX** 群創光電股份有限公司

# 6. INTERFACE TIMING

### 6.1 INPUT SIGNAL TIMING SPECIFICATIONS

The input signal timing specifications are shown as the following table and timing diagram.

Signal	Item	Symbol	Min.	Тур.	Max.	Unit	Note
	Frequency	$F_{clkin}$ (=1/TC)	67.67	76	82	MHz	
LVDS	Input cycle to cycle jitter	T <sub>rcl</sub>	_	_	200	ps	(3)
Receiver Clock	Spread spectrum modulation range	Fclkin_mod	$F_{clkin}$ -2%		$F_{clkin}$ +2%	MHz	
	Spread spectrum modulation frequency	F <sub>SSM</sub>	_	_	200	KHz	(4)
LVDS Receiver Data	Receiver Skew Margin	T <sub>rskm</sub>	600	_	-	ps	(5)
	Frame Rate		47	50	53	Hz	(6)
Vertical		F <sub>r6</sub>	57	60	63	Hz	(0)
Active Display	Total	Tv	776	806	1050	Th	Tv=Tvd+Tvb
Term	Display	Tvd	768	768	768	Th	_
	Blank	Tvb	8	38	282	Th	_
Horizontal	Total	Th	1530	1560	2006	Tc	Th=Thd+Thb
Active Display	Display	Thd	1366	1366	1366	Tc	—
Term			164	194	640	Тс	—

Note (1) Please make sure the range of pixel clock has follow the below equation :

 $Fclkin(max) \ge Fr6 \times Tv \times Th$ 

 $Fr5 \times Tv \times Th \ge Fclkin (min)$ 

Note (2) This module is operated in DE only mode and please follow the input signal timing diagram below :

群創光電股份有限公司

Note (3) The input clock cycle-to-cycle jitter is defined as below figures. Trcl =  $|T_1 - T|$ 

Note (4) The SSCG (Spread spectrum clock generator) is defined as below figures.

Note (5) The LVDS timing diagram and the receiver skew margin is defined and shown in following figure.

# INNOLUX 群創光電股份有限公司

# PRODUCT SPECIFICATION

# 6.2 POWER ON/OFF SEQUENCE

To prevent a latch-up or DC operation of LCD module, the power on/off sequence should be as the diagram below.

Note (1) The supply voltage of the external system for the module input should follow the definition of Vcc.

Note (2) Apply the lamp voltage within the LCD operation range. When the backlight turns on before the LCD operation or

the LCD turns off before the backlight turns off, the display may momentarily become abnormal screen.

Note (3) In case of VCC is in off level, please keep the level of input signals on the low or high impedance.

If T2<0,that maybe cause electrical overstress failure.

Note (4) T4 should be measured after the module has been fully discharged between power off and on period.

Note (5) Interface signal shall not be kept at high impedance when the power is on.

Note (6) Vcc must decay smoothly when power-off.

Version 1.0		20		Date : Jan. 14 2013

# RNOLUX 群創光電股份有限公司

PRODUCT SPECIFICATION

# 7. OPTICAL CHARACTERISTICS

### 7.1 TEST CONDITIONS

Item	Symbol	Value	Unit			
Ambient Temperature	Та	25 ±2	٥C			
Ambient Humidity	Ha	50 ±10	%RH			
Vertical Frame Rate	Fr	60	Hz			
Supply Voltage	V <sub>CC</sub>	12.0 ±1.2	V			
Input Signal	According to typical value in "3. ELECTRICAL CHARACTERISTICS"					

The LCD module should be stabilized at given temperature for 1 hour to avoid abrupt temperature change during measuring in a windless room.

Version 1.0

NNOLUX 群創光雷股份有限公司

# PRODUCT SPECIFICATION

### 7.2 OPTICAL SPECIFICATIONS

The relative measurement methods of optical characteristics are shown as below. The following items should be measured under the test conditions described in 7.1 and stable environment shown in 7.1.

It	em	Symbol	Condition	Min.	Тур.	Max.	Unit	Note	
	Red	Rcx			0.653		-		
	Keu	Rcy			0.327		-		
	Green	Gcx	$\theta_x=0^\circ, \theta_Y=0^\circ$		0.276		-		
Color	Green	Gcy	Viewing Angle at Normal Direction	-0.03	0.598	+0.03		(0)	
Chromaticit	y Blue	Bcx	Standard light source "C"	-0.05	0.133		1	(0)	
	Blue	Всу			0.112		-		
	White	Wcx			0.308		-		
	winte	Wcy			0.350		-		
Transmittar	Transmittance			-	5.3	-	%	(5)	
Transmittar	Transmittance Variation Contrast Ratio Response Time		$\theta_x=0^\circ, \theta_Y=0^\circ$ With INX Module@60Hz			1.3		(6)	
Contrast Ra				2000	3000	-	-	(1),(3)	
Response Ti			$\theta_x=0^\circ, \theta_Y=0^\circ$ With INX Module@60Hz	-	8.5	20	ms	(1),(4)	
	Horizontal				88	-			
Viewing		θ <sub>x</sub> -	CR≥20		88	-	Deg.	(1),(2)	
Angle	Vertical	$\theta_{Y}$ +	With INX Module		88	-	Deg.	(1),(4)	
Vertical		θγ-			88	-			

Note (0) Light source is the standard light source "C" which is defined by CIE and driving voltage are based on

suitable gamma voltages. The calculating method is as following :

1.Measure Module's and BLU's spectrum at center point. W, R,G, B are with signal input. BLU (V236BJ1-LE1) is supplied by INX.

2. Calculate cell's spectrum.

3. Calculate cell's chromaticity by using the spectrum of standard light source "C".

Note (1) Light source is the BLU which supplied by INX (V236BJ1-LE1) and the cell driving voltage are based on suitable gamma voltages.

22

# NNOLUX 群創光電股份有限公司

Note (2) Definition of Viewing Angle  $(\theta x, \theta y)$ :

Viewing angles are measured by Autronic Conoscope Cono-80 (or Eldim EZ-Contrast 160R)

### Note (3) Definition of Contrast Ratio (CR):

The contrast ratio can be calculated by the following expression.

Contrast Ratio (CR) = Surface Luminance of L255 Surface Luminance of L0

L255: Luminance of gray level 255

L 0: Luminance of gray level 0

CR = CR (5), where CR (X) is corresponding to the Contrast Ratio of the point X at the figure in Note (6).

Note (4) Definition of Gray-to-Gray Switching Time :

The driving signal means the signal of gray level 0, 31, 63, 95, 127, 159, 191, 223 and 255.

Gray to gray average time means the average switching time of gray level 0, 31, 63, 95, 127, 159, 191, 223 and 255 to each other.

Version	1.0
---------	-----

23

Date : Jan. 14 2013

Note (5) Definition of Transmittance (T%) :

Measure the transmittance at 5 points.

Light source is the BLU which contains three diffuser sheets and the cell driving voltage are based on suitable gamma voltages.

Transmittance (T%) = Average [T(1), T(2), T(3), T(4), T(5)]

The transmittance of each point can be calculated by the following expression.

 $T (X) = \frac{L1023 (X) \text{ of LCD module}}{\text{Luminance } (X) \text{ of BLU}} \times 100\%$ 

L1023: Luminance of gray level 1023

T(X) is corresponding to the point X1~X5 at the figure in Note (6).

Note (6) Definition of Transmittance Variation ( $\delta T$ ) :

Measure the transmittance at 5 points.

Transmittance Variation ( $\delta T$ ) =  $\frac{\text{Maximum [T(1), T(2), T(3), T(4), T(5)]}}{\text{Minimum [T(1), T(2), T(3), T(4), T(5)]}}$ 

T(X) is calculated as Note(5).

# 8. PRECAUTIONS

### 8.1 ASSEMBLY AND HANDLING PRECAUTIONS

- [1] Do not apply improper or unbalanced force such as bending or twisting to open cells during assembly.
- [2] It is recommended to assemble or to install an open cell into a customer's product in clean working areas. The dust and oil may cause electrical short to an open cell or worsen polarizers on an open cell.
- [3] Do not apply pressure or impulse to an open cell to prevent the damage.
- [4] Always follow the correct power-on sequence when an open cell is assembled and turned on. This can prevent the damage and latch-up of the CMOS LSI chips.
- [5] Do not design sharp-pointed structure / parting line / tooling gate on the plastic part of a COF (Chip on film), because the burr will scrape the COF.
- [6] If COF would be bended in assemble process, do not place IC on the bending corner.
- [7] The gap between COF IC and any structure of BLU must be bigger than 2 mm. This can prevent the damage of COF IC.
- [8] The bezel opening must have no burr and be smooth to prevent the surface of an open cell scraped.
- [9] The bezel of a module or a TV set can not contact with force on the surface of an open cell. It might cause light leakage or scrape.
- [10] In the case of no FFC or FPC attached with open cells, customers can refer the FFC / FPC drawing and buy them by self.
- [11] It is important to keep enough clearance between customers' front bezel/backlight and an open cell.Without enough clearance, the unexpected force during module assembly procedure may damage an open cell.
- [12] Do not plug in or unplug an I/F (interface) connector while an assembled open cell is in operation.
- [13] Use a soft dry cloth without chemicals for cleaning, because the surface of the polarizer is very soft and easily scratched.
- [14] Moisture can easily penetrate into an open cell and may cause the damage during operation.
- [15] When storing open cells as spares for a long time, the following precaution is necessary.
  - [15.1] Do not leave open cells in high temperature and high humidity for a long time. It is highly recommended to store open cells in the temperature range from 0 to 35°C at normal humidity without condensation.
  - [15.2] Open cells shall be stored in dark place. Do not store open cells in direct sunlight or fluorescent light environment.
- [16] When ambient temperature is lower than 10°C, the display quality might be reduced.
- [17] Unpacking (Cartons/Tray plates) in order to prevent open cells broken:
  - [17.1] Moving tray plates by one operator may cause tray plates bent which may induce open cells broken. Two operators carry one carton with their two hands. Do not throw cartons/tray plates, avoid any impact on cartons/tray plates, and put down & pile cartons/tray plates gently.
  - [17.2] A tray plate handled with unbalanced force may cause an open cell damaged. Trays should be completely put on a flat platform.
  - [17.3] To prevent open cells broken, tray plates should be moved one by one from a plastic bag.

Version 1.0

Date : Jan. 14 2013

- [17.4] Please follow the packing design instruction, such as the maximum number of tray stacking to prevent the deformation of tray plates which may cause open cells broken.
- [17.5] To prevent an open cell broken or a COF damaged on a tray, please follow the instructions below:[17.5.1] Do not peel a polarizer protection film of an open cell off on a tray
  - [17.5.2] Do not install FFC or LVDS cables of an open cell on a tray
  - [17.5.3] Do not press the surface of an open cell on a tray.
  - [17.5.4] Do not pull X-board when an open cell placed on a tray.
- [18] Unpacking (Hard Box) in order to prevent open cells broken:
  - [ 18.1 ] Moving hard boxes by one operator may cause hard boxes fell down and open cells broken by abnormal methods. Two operators carry one hard box with their two hands. Do handle hard boxes carefully, such as avoiding impact, putting down, and piling up gently.
  - [18.2] To prevent hard boxes sliding from carts and falling down, hard boxes should be placed on a surface with resistance.
  - [18.3] To prevent an open cell broken or a COF damaged in a hard box, please follow the instructions below:
    - [18.3.1] Do not peel a polarizer protection film of an open cell off in a hard box.
    - [18.3.2] Do not install FFC or LVDS cables of an open cell in a hard box.
    - [18.3.3] Do not press the surface of an open cell in a hard box.
    - [18.3.4] Do not pull X-board when an open cell placed in a hard box.
- [19] Handling In order to prevent open cells, COFs, and components damaged:
  - [19.1] The forced displacement between open cells and X-board may cause a COF damaged. Use a fixture tool for handling an open cell to avoid X-board vibrating and interfering with other components on a PCBA & a COF.
  - [19.2] To prevent open cells and COFs damaged by taking out from hard boxes, using vacuum jigs to take out open cells horizontally is recommended.
  - [19.3] Improper installation procedure may cause COFs of an open cell over bent which causes damages. As installing an open cell on a backlight or a test jig, place the bottom side of the open cell first on the backlight or the test jig and make sure no interference before fitting the open cell into the backlight/the test jig.
  - [19.4] Handle open cells one by one.
- [20] Avoid any metal or conductive material to contact PCB components, because it could cause electrical damage or defect.

### **8.2 SAFETY PRECAUTIONS**

- [1] If the liquid crystal material leaks from the open cell, it should be kept away from the eyes or mouth. In case of contact with hands, skin or clothes, it has to be washed away thoroughly with soap.
- [2] After the end of life, open cells are not harmful in case of normal operation and storage.
