PRODUCT SPECIFICATION

1. GENERAL DESCRIPTION

1.1 OVERVIEW

V290BJ1-PE1 is a 29″ TFT Liquid Crystal Display product with driver ICs and 1ch-LVDS interface. This product supports 1366 x 768 HDTV format and can display 16.7M colors (8-bit). The backlight unit is not built in.

1.2 FEATURES

CHARACTERISTICS ITEMS	SPECIFICATIONS
Screen Diagonal [in]	29
Pixels [lines]	1366 × 768
Active Area [mm]	631.092(H) × 354.816(V) (29″ diagonal)
Sub-Pixel Pitch [mm]	0.154(H) × 0.462(V)
Pixel Arrangement	RGB Vertical Stripe
Weight [g]	727 Typ. (g)
Physical Size [mm]	647.14 × 411.516 × 2.3 Typ.
Display Mode	Transmissive Mode / Normallly Black
Contrast Ratio	Typ.3000:1 (Typical value measure by CMI's Module)
Glass thickness (Array / CF) [mm]	0.5 / 0.5
Viewing Angle (CR>20)	Typ. +88/-88(H), +88/-88(V) (CR≥20) (Typical value measured by CMI's module)
Color Chromaticity	R = (0.650, 0.328) G = (0.277, 0.596) B = (0.132, 0.115) W= (0.299, 0.353) * Please refer to "color chromaticity" in 7.2
Cell Transparency [%]	5.4% * Please refer to "Center Transmittance" in 7.2
Polarizer Surface Treatment	Anti-Glare coating (Haze 1%)
Rotation Function	Unachievable
Display Orientation	Signal input with "CMI"

Note (1) Please make sure the range of pixel clock has follow the below equation :

$$Fclkin(max) \geqq Fr6 \times Tv \times Th$$

$$Fr5 \times Tv \times Th \geqq Fclkin\ (min)$$

Note (2) This module is operated in DE only mode and please follow the input signal timing diagram below :
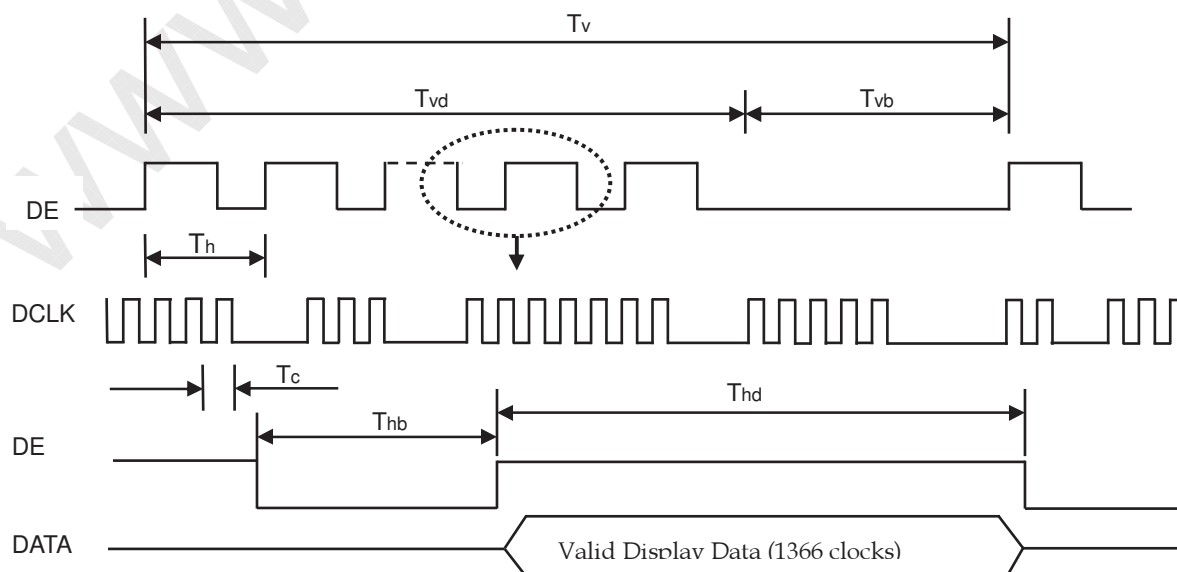

Note (3) The input clock cycle-to-cycle jitter is defined as below figures. $T_{rcl} = |T_1 - T|$

Note (4) The SSCG (Spread spectrum clock generator) is defined as below figures.

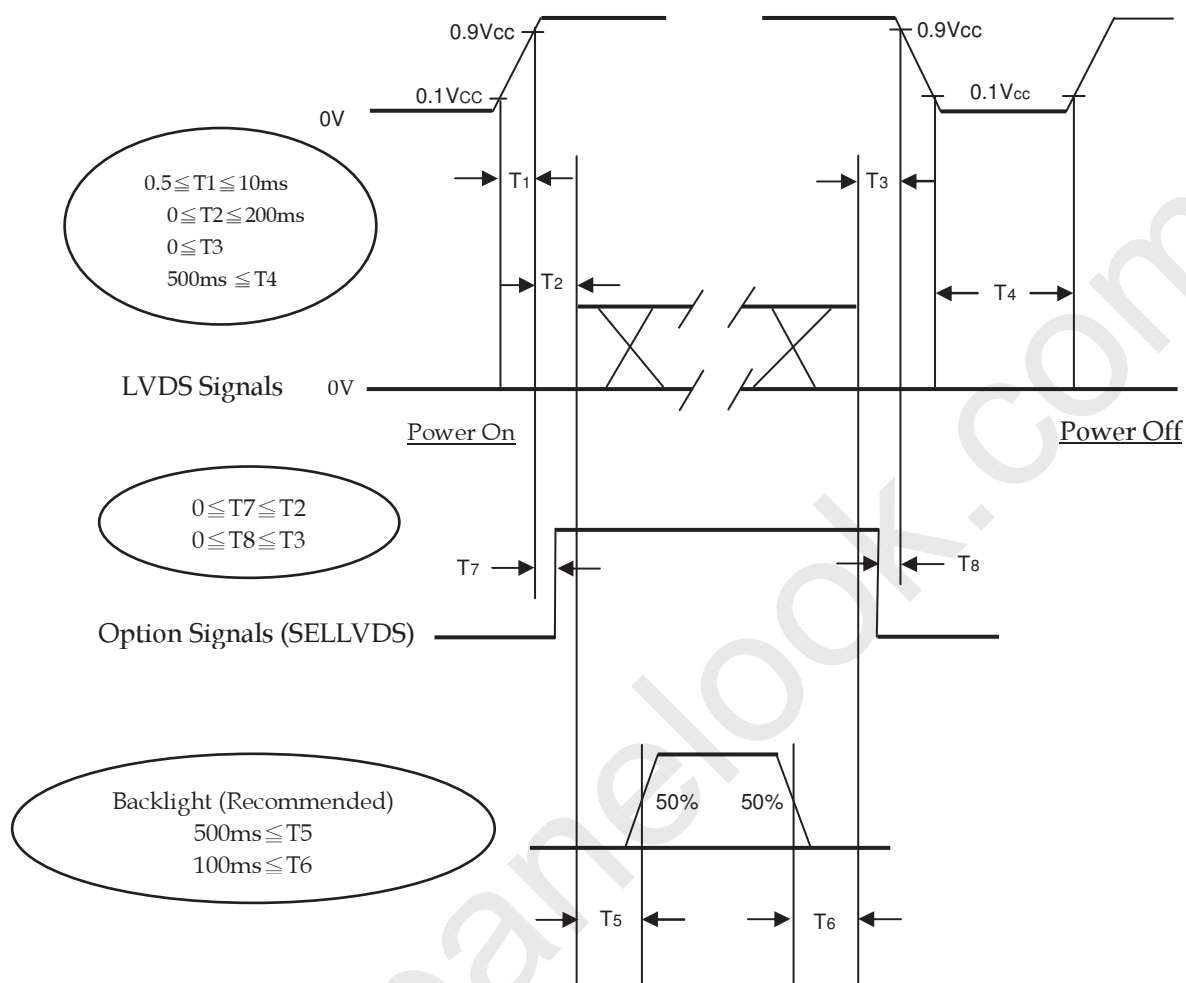

Note (5) The LVDS timing diagram and the receiver skew margin is defined and shown in following figure.

Note (1) The supply voltage of the external system for the module input should follow the definition of Vcc.

Note (2) Apply the lamp voltage within the LCD operation range. When the backlight turns on before the LCD operation or the LCD turns off before the backlight turns off, the display may momentarily become abnormal screen.

Note (3) In case of VCC is in off level, please keep the level of input signals on the low or high impedance.

If $T2<0$,that maybe cause electrical overstress failure.

Note (4) T4 should be measured after the module has been fully discharged between power off and on period.

Note (5) Interface signal shall not be kept at high impedance when the power is on.

Note (0) Light source is the standard light source "C" which is defined by CIE and driving voltage are based on

suitable gamma voltages. The calculating method is as following :

    1.Measure Module's and BLU's spectrum at center point. W, R,G, B are with signal input. BLU (V290BJ1-LE1) is

      supplied by CMI.

    2.Calculate cell's spectrum.

    3.Calculate cell's chromaticity by using the spectrum of standard light source "C".

Note (1) Light source is the BLU which supplied by CMI and driving voltage are based on suitable gamma voltages.

Note (2) Definition of Viewing Angle (θx, θy) :

Viewing angles are measured by Autronic Conoscope Cono-80 (or Eldim EZ-Contrast 160R)

Normal

θx = θy = 0º

Note (3) Definition of Contrast Ratio (CR) :

The contrast ratio can be calculated by the following expression.

$$\text{Contrast Ratio (CR)} = \frac{\text{Surface Luminance of L255}}{\text{Surface Luminance of L0}}$$

L255: Luminance of gray level 255

L 0: Luminance of gray level 0

CR = CR (5), where CR (X) is corresponding to the Contrast Ratio of the point X at the figure in Note (6).

switching time
The driving signal means the signal of gray level 0, 31, 63, 95, 127, 159, 191, 223 and 255.

Gray to gray average time means the average switching time of gray level 0, 31, 63, 95, 127, 159, 191, 223 and 255 to each other.

Note (5) Definition of Transmittance (T%) :

Measure the luminance of gray level 255 at 5 points of LCD module.

$$Transmittance\ (T\%) = \frac{average\ [L\,(1),\,L\,(2),\,L\,(3),\,L\,(4),\,L\,(5)]\ of\ LCD\ module}{average\ [L\,(1),\,L\,(2),\,L\,(3),\,L\,(4),\,L\,(5)]\ of\ BLU} \times 100\%$$

The 5 point is corresponding of the point X at the figure in Note (6).
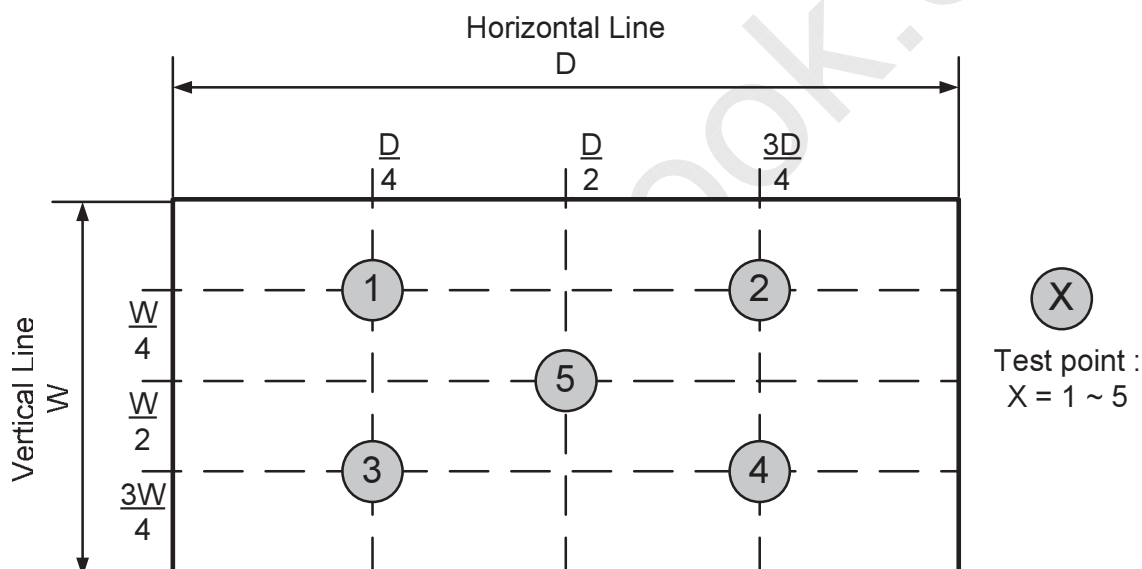

Note (6) Definition of Transmittance Variation (δT) :

Measure the transmittance at 5 points.

The transmittance of each point can be calculated by the following expression.

T (X) = L255 (X) of LCD module / Luminance (X) of BLU.

L255: Luminance of gray level 255

$$Transmittance\ Variation\ (\delta T\,)= \frac{Maximume\ [T\,(1),\,T\,(2),\,T\,(3),\,T\,(4),\,T\,(5)]}{Minimum\ [T\,(1),\,T\,(2),\,T\,(3),\,T\,(4),\,T\,(5)]}$$

PRODUCT SPECIFICATION

8. PRECAUTIONS

8.1 ASSEMBLY AND HANDLING PRECAUTIONS

[1]   Do not apply improper or unbalanced force such as bending or twisting to open cells during assembly.

[2]   It is recommended to assemble or to install an open cell into a customer's product in clean working areas. The dust and oil may cause electrical short to an open cell or worsen polarizers on an open cell.

[3]   Do not apply pressure or impulse to an open cell to prevent the damage.

[4]   Always follow the correct power-on sequence when an open cell is assembled and turned on. This can prevent the damage and latch-up of the CMOS LSI chips.

[5]   Do not design sharp-pointed structure / parting line / tooling gate on the plastic part of a COF (Chip on film), because the burr will scrape the COF.

[6]   If COF would be bended in assemble process, do not place IC on the bending corner.

[7]   The gap between COF IC and any structure of BLU must be bigger than 2 mm. This can prevent the damage of COF IC.

[8]   The bezel opening must have no burr and be smooth to prevent the surface of an open cell scraped.

[9]   The bezel of a module or a TV set can not contact with force on the surface of an open cell. It might cause light leakage or scrape.

[10] In the case of no FFC or FPC attached with open cells, customers can refer the FFC / FPC drawing and buy them by self.

[11] It is important to keep enough clearance between customers' front bezel/backlight and an open cell. Without enough clearance, the unexpected force during module assembly procedure may damage an open cell.

[12] Do not plug in or unplug an I/F (interface) connector while an assembled open cell is in operation.

[13] Use a soft dry cloth without chemicals for cleaning, because the surface of the polarizer is very soft and easily scratched.

[14] Moisture can easily penetrate into an open cell and may cause the damage during operation.

[15] When storing open cells as spares for a long time, the following precaution is necessary.

    [15.1] Do not leave open cells in high temperature and high humidity for a long time. It is highly recommended to store open cells in the temperature range from 0 to 35℃ at normal humidity without condensation.

    [15.2] Open cells shall be stored in dark place. Do not store open cells in direct sunlight or fluorescent light environment.

[16] When ambient temperature is lower than 10ºC, the display quality might be reduced.

[17] Unpacking (Cartons/Tray plates) in order to prevent open cells broken:

    [17.1] Moving tray plates by one operator may cause tray plates bent which may induce open cells broken. Two operators carry one carton with their two hands. Do not throw cartons/tray plates, avoid any impact on cartons/tray plates, and put down & pile cartons/tray plates gently.

    [17.2] A tray plate handled with unbalanced force may cause an open cell damaged. Trays should be completely put on a flat platform.

    [17.3] To prevent open cells broken, tray plates should be moved one by one from a plastic bag.

[17.4] Please follow the packing design instruction, such as the maximum number of tray stacking to prevent the deformation of tray plates which may cause open cells broken.

[17.5] To prevent an open cell broken or a COF damaged on a tray, please follow the instructions below:

[17.5.1] Do not peel a polarizer protection film of an open cell off on a tray

[17.5.2] Do not install FFC or LVDS cables of an open cell on a tray

[17.5.3] Do not press the surface of an open cell on a tray.

[17.5.4] Do not pull X-board when an open cell placed on a tray.

[18] Unpacking (Hard Box) in order to prevent open cells broken:

[18.1] Moving hard boxes by one operator may cause hard boxes fell down and open cells broken by abnormal methods. Two operators carry one hard box with their two hands. Do handle hard boxes carefully, such as avoiding impact, putting down, and piling up gently.

[18.2] To prevent hard boxes sliding from carts and falling down, hard boxes should be placed on a surface with resistance.

[18.3] To prevent an open cell broken or a COF damaged in a hard box, please follow the instructions below:

[18.3.1] Do not peel a polarizer protection film of an open cell off in a hard box.

[18.3.2] Do not install FFC or LVDS cables of an open cell in a hard box.

[18.3.3] Do not press the surface of an open cell in a hard box.

[18.3.4] Do not pull X-board when an open cell placed in a hard box.

[19] Handling – In order to prevent open cells, COFs , and components damaged:

[19.1] The forced displacement between open cells and X-board may cause a COF damaged. Use a fixture tool for handling an open cell to avoid X-board vibrating and interfering with other components on a PCBA & a COF.

[19.2] To prevent open cells and COFs damaged by taking out from hard boxes, using vacuum jigs to take out open cells horizontally is recommended.

[19.3] Improper installation procedure may cause COFs of an open cell over bent which causes damages. As installing an open cell on a backlight or a test jig, place the bottom side of the open cell first on the backlight or the test jig and make sure no interference before fitting the open cell into the backlight/the test jig.

[19.4] Handle open cells one by one.

[20] Avoid any metal or conductive material to contact PCB components, because it could cause electrical damage or defect.

8.2 SAFETY PRECAUTIONS

[1]   If the liquid crystal material leaks from the open cell, it should be kept away from the eyes or mouth. In case of contact with hands, skin or clothes, it has to be washed away thoroughly with soap.

[2]   After the end of life, open cells are not harmful in case of normal operation and storage.
