

VL905P75

- IR Pulse Laser Diode
- 905 nm, 75 W
- Single Emitter
- 5mm Epoxy Package
- Life Time > 10.000 h

Description

VL905P75 is a IR 905 nm single emitter pulse laser diode in 5 mm epoxy package with output power of 75 W at 100 ns pulse width and 0.2 % duty cycle. It is ideally suited for range finding applications. Based on a compact epoxy package and capable of exceeding 10000 hours of life time, it provides a very cost effective solution.

Maximum Ratings

Parameter	Symbol	Values	Unit
		Min.	Max.
Peak power	P_p	90	W
Peak forward current	I_p	40	A
Pulse width	t_p	200	ns
Duty cycle	d.c.	0.1	%
Reverse Voltage	V_R	3	V
Operating temperature	T_{CASE}	- 40	+85
Storage temperature	T_{STG}	- 40	+100
Soldering temperature	T_s		260

Laser Characteristics ($T_{CASE} = 25^\circ\text{C}$)

Parameter	Symbol	Values	Unit
		Typ.	Max.
Peak output power	P_o	65	75
Threshold current	I_{th}	0.5	0.75
Emission wavelength	λ	895	905
Spectral Width (FWHM)	$\Delta\lambda$		7
Beam Divergence (FWHM)	$\Theta_{ } \times \Theta_{\perp}$	11x25	deg
Pulse Width	T_w	100	ns
Duty Cycle*	D	0.05	%
Peak Current	I_b	30	A
Wavelength Temp. Coefficient		0.28	nm/°C

*Standard operating conditions: 100 ns, 5 kHz, 25A

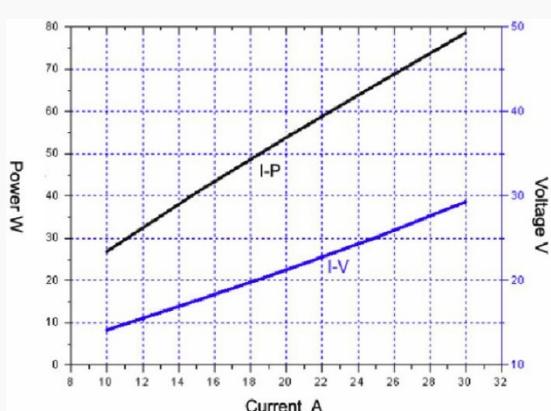

Safety Advice

Caution: Depending on the mode of operation, this laser diode does emit highly concentrated infrared light which can be **extremely hazardous to the human eye and skin**. Products which do incorporate this laser diode must comply with safety precautions following IEC 60825-1

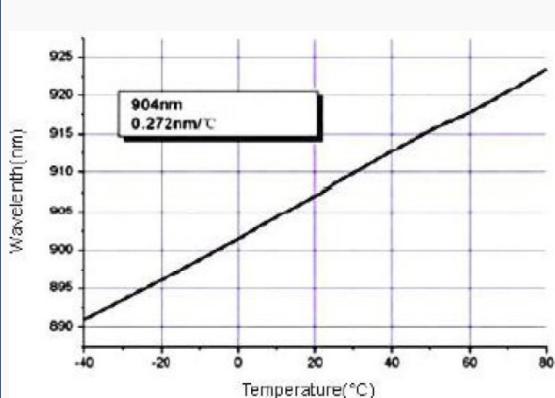

Typical performance

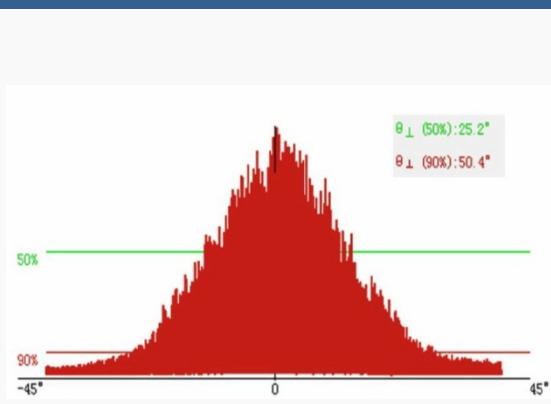

Power / Voltage vs. Current

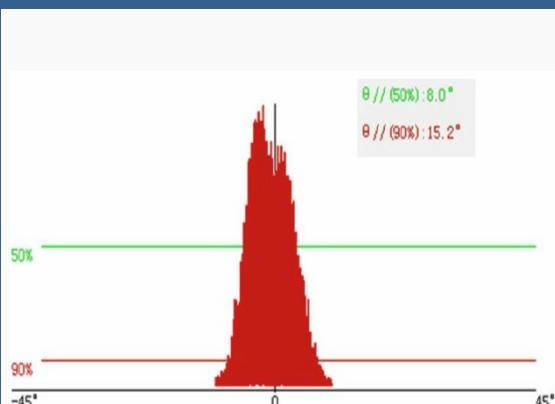

Wavelength vs. Temperature

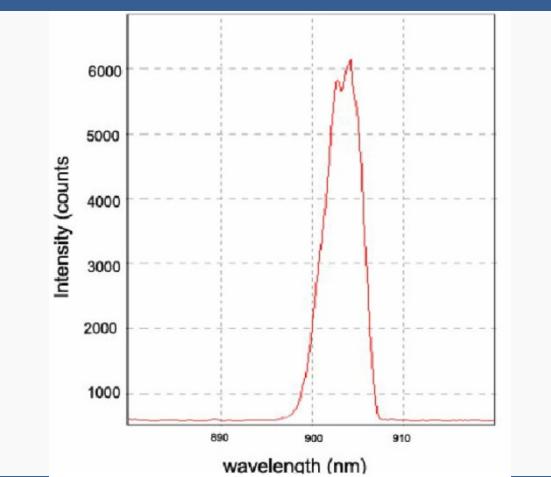

Perpendicular divergence angle

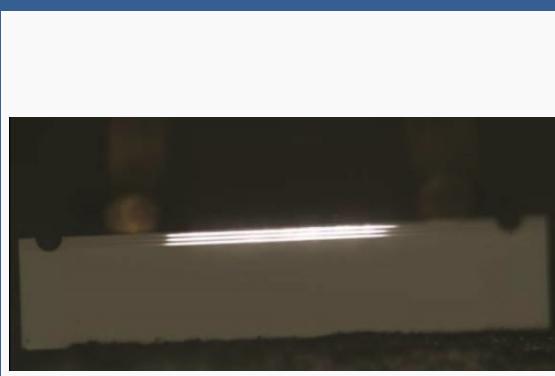

Parallel divergence angle

Spectral emission

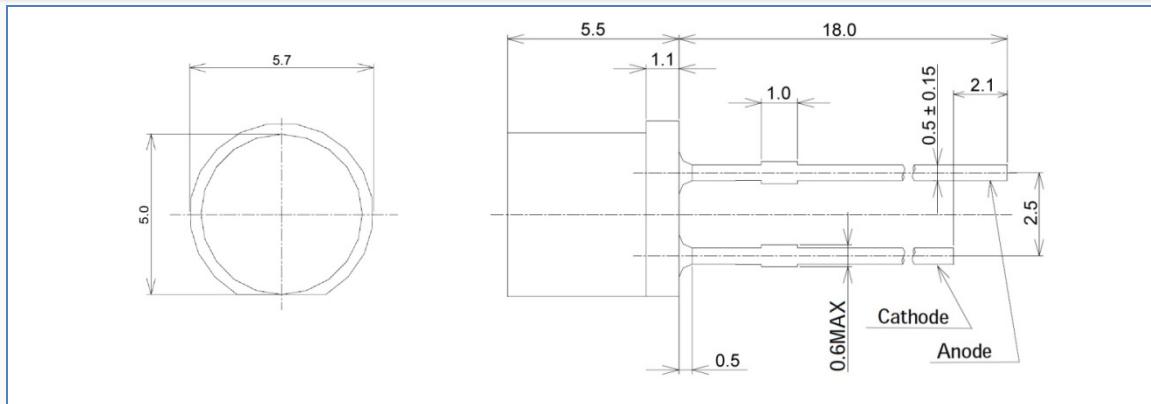

Near-field illumination

ESD Caution

Always do handle laser diodes with extreme caution to prevent electrostatic discharge, the primary cause of unexpected diode failure. ESD failures can be prevented by always wearing wrist straps, only using a grounding workplace, and following strict anti-static guidelines when handling the laser diode
