

---

Hall Effect Base Linear Current Sensor
--

**Features:**

- Low noise analog signal path
- 120  $\mu\Omega$  internal conductor resistance
- Output voltage proportional to AC and DC current
- Min. sensing current 60A at 5V voltage supply
- High Sensitivity 33mV/A
- Wide operating voltage range 3.0~12 V.
- Low operating current 3mA
- Nearly zero magnetic hysteresis.
- Ratiometric output from supply voltage
- 23K Hz bandwidth

**Functional Description :**

The Winson WCS1750 provides economical and precise solution for both DC and AC current sensing in industrial, commercial and communications systems. The unique package allows for easy implementation by the customer. Typical applications include motor control, load detection and management, over-current fault detection and any intelligent power management system etc...

The WCS1750 consists of a precise, low-temperature drift linear hall sensor IC with temperature compensation circuit and a current transformer with 120  $\mu\Omega$  typical internal conductor resistance. This extremely low resistance can effectively reduce power loss, operating temperature and increase the reliability greatly. Applied current flowing through this conduction path generates a magnetic field which is sensed by the integrated Hall IC and converted into a proportional voltage.

The terminals of the conductive path are electrically isolated from the sensor leads. This allow the WCS1750 current sensor to be used in applications requiring electrical isolation without the use of opto-isolators or other costly isolation techniques and make system more competitive in cost.

**ABSOLUTE MAXIMUM RATING**

Supply Voltage, Vdd	14V
Pass Current, IP	120A
Output Current Sink	0.4mA
Output Current Source	2mA
Basic Isolation Voltage	4000V
Operating Temperature Range	
Ta	-20°C to +125°C
Storage Temperature Range	
Ts	-65°C to +150°C
Power Dissipation Pd	1 W

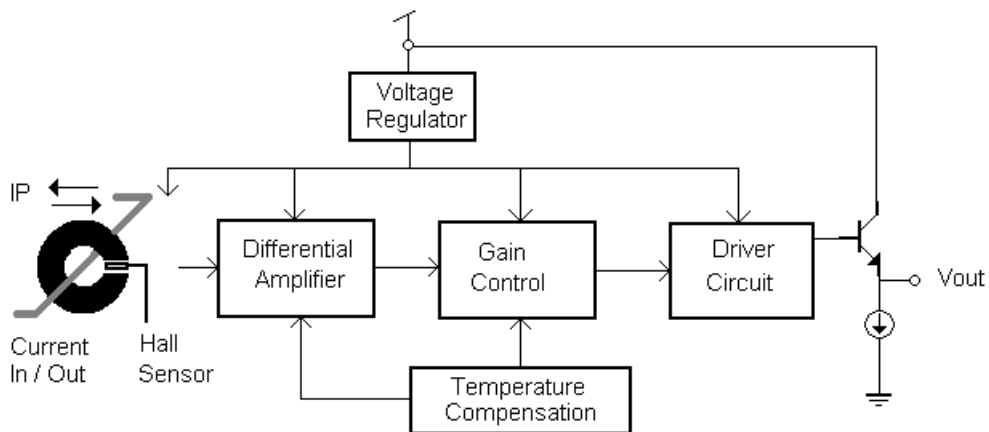

**Vout vs. Primary Current**

**△ Vout vs. Primary Current**

Function Block:

Electrical Characteristics:

(T=+25°C, Vdd=5.0V)

Characteristic	Symbol	Test Conditions	Min	Typ	Max	Units
Supply Voltage	Vcc	—	3.0	—	12	V
Supply Current	Isupply	IP =0 A	—	3.5	6.0	mA
Zero Current Vout	V0G	IP =0 A	2.4	2.5	2.6	V
Primary Conductor Resistance	Rprimary	IP =10 A	—	120	—	μΩ

Winson reserves the right to make changes to improve reliability or manufacturability.

Sensitivity	$\Delta V_{out}$	IP= +10 A	+29	+32	+35	mV/A
		IP= -10 A	-30	-33	-36	
Bandwidth	BW		—	23	—	kHz
Measurable Current Range	MCR	Vdd=5V	—	$\pm 60$	—	A
		Vdd=12V	—	$\pm 120$	—	
Temperature Drift	$\Delta V_{out}$	Ip =0 A	—	$\pm 0.5$	—	mV/°C

All output-voltage measurements are made with a voltmeter having an input impedance of at least 100k $\Omega$
