

XC6603 Series

1A, 0.5V Low Input Voltage, High Speed LDO Regulator
(Adjustable Soft-start time with an external component)

■ GENERAL DESCRIPTION

The XC6603 series is a low voltage input (0.5V) operation and provides high accuracy $\pm 15\text{mV}$ / $\pm 20\text{mV}$ and can supply large current efficiently due to its ultra low on-resistance even at low output voltages.

The series is ideally suited to the applications which require high current in low input/output voltages and consists of a N-ch driver transistor, a voltage reference, an error amplifier, a current limiter, a foldback circuit, a thermal shutdown (TSD) circuit, an under voltage lock out (UVLO) circuit, a soft-start circuit and a phase compensation circuit.

Output voltage is selectable in 0.1V increments within a range of 0.5V to 1.8V using laser trimming technology and ceramic capacitors can be used for the output stabilization capacitor (C_L). The inrush current (I_{RUSH}) from V_{IN} to V_{OUT} for charging C_L at start-up can be reduced and makes the V_{IN} stable. Soft-start time can be adjustable with connecting a capacitor to the SS pin. The inrush current conflicts with the soft-start time, therefore if soft-start is set longer, the inrush current is decreased.

The CE function enables the output to be turned off and the series to be put in stand-by mode resulting in greatly reduced power consumption. At the time of entering the stand-by mode, the series enables the electric charge at the output capacitor (C_L) to be discharged via the internal switch. As a result the V_{OUT} pin quickly returns to the V_{SS} level.

The CE pull-down function keeps the IC to be in stand-by mode even if the CE pin is left open.

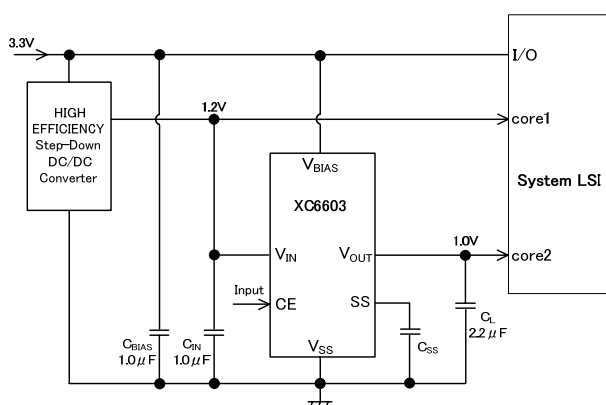

■ APPLICATIONS

- Smart phones / Mobile phones
- Digital still cameras / Camcorders
- Note PCs / Tablet PCs
- E-book Readers / Electronic dictionaries
- Wireless LAN

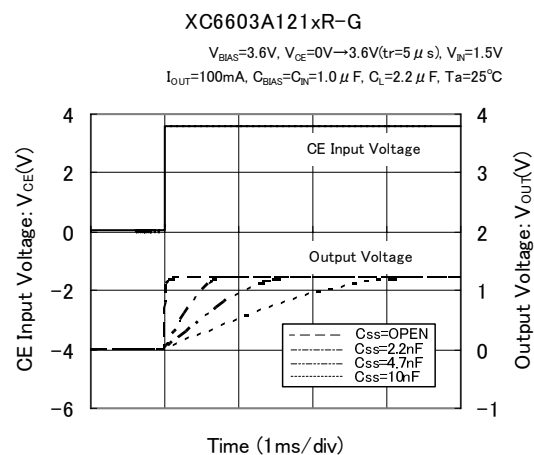

■ FEATURES

Maximum Output Current	: 1A (1.3A Limit)
ON Resistance	: $0.15\Omega @ V_{\text{BIAS}}=3.6\text{V}, V_{\text{OUT}}=1.2\text{V}$
Bias Voltage Range	: $2.5\text{V} \sim 6.0\text{V}$
Input Voltage Range	: $0.5\text{V} \sim 3.0\text{V}$
Output Voltage Range	: $0.5\text{V} \sim 1.8\text{V}$ (0.1V increments)
Output Voltage Accuracy	: $\pm 0.015\text{V} @ V_{\text{OUT}} < 1.2\text{V}$ $\pm 0.020\text{V} @ V_{\text{OUT}} \geq 1.2\text{V}$
Ripple Rejection	: $60\text{dB} @ f=1\text{kHz} (V_{\text{BIAS_PSRR}})$ $75\text{dB} @ f=1\text{kHz} (V_{\text{IN_PSRR}})$
Low Power Consumption	: $100 \mu\text{A} (V_{\text{BIAS}}), 6.5 \mu\text{A} (V_{\text{IN}}) @ V_{\text{OUT}}=1.2\text{V}$
Stand-by Current	: $0.01 \mu\text{A} (V_{\text{BIAS}}), 0.01 \mu\text{A} (V_{\text{IN}})$
Under-voltage Lockout	: $1.8\text{V} (V_{\text{BIAS}}), 0.4\text{V} (V_{\text{IN}})$
Thermal Shutdown	: $150^\circ\text{C} @ \text{detect}, 125^\circ\text{C} @ \text{release}$
Protection Circuit	: Foldback Current Limit, TSD, UVLO
Function	: Adjustable Soft-start time with an external component CE Pull-Down (Active High) C_L Auto Discharge
Output Capacitor	: Ceramic Capacitor Compatible ($2.2 \mu\text{F}$)
Operating Ambient Temperature	: $-40^\circ\text{C} \sim +85^\circ\text{C}$
Packages	: USP-6C, SOT-26W
Environmentally Friendly	: EU RoHS Compliant, Pb Free

NOTE:

Unless otherwise stated, V_{BIAS}=V_{CE}=3.6V, V_{IN}=V_{OUT(T)}+0.3V, I_{OUT}=1mA, C_{BIAS}=C_{IN}=1.0 μF, C_L=2.2 μF, SS Pin=OPEN

(*1) V_{OUT(E)} = Effective output voltage

(*2) V_{OUT(T)} = Nominal output voltage

(*3) Mount conditions affect heat dissipation. Maximum output current is not guaranteed when TSD starts to operate earlier.

(*4) V_{dif}={V_{IN1}-V_{OUT1}}

V_{IN1} is an input voltage when V_{OUT1} appears at the output during decreasing input voltage gradually.

V_{OUT1} is a voltage equal to 98% of the output voltage where V_{BIAS}=V_{CE}=3.6 and V_{IN}=V_{OUT(T)}+0.3V at I_{OUT}=1A is input to the V_{IN} pin.

(*5) Please refer to the table E-1 named DROPOUT VOLTAGE CHART

(*6) Supply current 1 (I_{BIAS}) may be fluctuated because that some bias current flows into the output.

(*7) Design value

OPERATIONAL DESCRIPTION

The voltage divided by resistors R1 and R2 is compared with the internal reference voltage by the error amplifier. The V_{OUT} pin is then driven by the subsequent output signal. The output voltage at the V_{OUT} pin is controlled and stabilized by a system of negative feedback.

V_{BIAS} pin is power supply pin for output voltage control circuit, protection circuit and CE circuit. Also, the V_{BIAS} pin supplies some current as output current. V_{IN} pin is connected to a driver transistor and provides output current.

In order to obtain high efficient output current through low on-resistance, please take enough $V_{GS} (=V_{BIAS} - V_{OUT(E)})$ of the driver transistor.

Figure1: XC6603 Series, Type A

<Soft-Start Function>

With the XC6603 (Type A), the inrush current (I_{RUSH}) from V_{IN} to V_{OUT} for charging C_L at start-up can be reduced and makes the V_{IN} stable.

With connecting a soft-start capacitor to the SS pin, rise time of the reference voltage (V_{ref}) is adjusted, then soft-start time can be set freely. The inrush current conflicts with the soft-start time, so that the inrush current is decreased if the soft-start time is set longer.

Please also note that the inrush current is depended on C_L or V_{BIAS} . When C_L or V_{BIAS} is larger, the inrush current becomes larger. Please set an appropriate soft-start time under the conditions of use.

When the SS pin is left open, soft-start circuit will not operate.

Soft-start time is calculated by the following formulas.

$$t_{SS} = C_{SS} \times V_{soft} / I_{soft}$$

t_{SS} : Soft-start time

C_{SS} : Soft-start capacitance

V_{soft} : Soft-start threshold voltage

I_{soft} : SS pin current

Figure2: XC6603 Series, C_{SS} Range of use

SOFT-START CAPACITOR	SOFT-START TIME
C_{SS}	t_{SS} (TYP.)
$\sim 0.01 \mu F$	$\sim 2.17ms$

XC6603 Series, Soft-start

■ OPERATIONAL DESCRIPTION (Continued)

<Current Limiter, Short-Circuit Protection>

The XC6603 series includes a combination of a fixed current limiter circuit and a foldback short-circuit protection. When the output current reaches the current limit, the output voltage drops and this operation makes the output current foldback to be decreased.

<Thermal Shutdown Circuit (TSD) >

When the junction temperature of the built-in driver transistor reaches the temperature limit, the thermal shutdown circuit operates and the driver transistor will be set to OFF. The IC resumes its operation when the thermal shutdown function is released and the IC's operation is automatically restored because the junction temperature drops to the level of the thermal shutdown release temperature.

<Under Voltage Lock Out (UVLO) >

When the V_{BIAS} pin and V_{IN} pin voltage drops, the output driver transistor is set to OFF by UVLO function to prevent false output caused by unstable operation of the internal circuitry. When the V_{BIAS} pin voltage and the V_{IN} pin voltage rises at release voltage, the UVLO function is released. The driver transistor is turned ON and start to operate voltage regulation.

<CE Pin>

The XC6603 internal circuitry can be shutdown via the signal to the CE pin. In shutdown mode with CE low level voltage, the V_{OUT} pin will be pulled down to the V_{SS} level via C_L discharge resistance (R_{DCHG}) placed in parallel to R1 and R2.

The CE pin has pull-down circuitry so that CE input current flows during IC operation. If the CE pin voltage is taken from V_{BIAS} pin or V_{SS} pin then logic is fixed and the IC will operate normally. However, supply current may increase as a result of through current in the IC's internal circuitry when medium voltage is input.

< C_L High Speed Auto-Discharge>

XC6603 series can quickly discharge the electric charge at the output capacitor (C_L) via the internal transistor located between the V_{OUT} pin and the V_{SS} pin when a low signal to the CE pin which enables a whole IC circuit put into OFF state. When the IC is disabled, electric charge at the output capacitor (C_L) is quickly discharged so that it could avoid malfunction. Discharge time of the output capacitor (C_L) is set by the C_L auto-discharge resistance (R_{DCHG}) and the output capacitor (C_L). By setting time constant of a C_L auto-discharge resistance value (R_{DCHG}) and an output capacitor value (C_L) as τ ($\tau = C_L \times R_{DCHG}$), the output voltage after discharge via the internal transistor is calculated by the following formula. Please also note R_{DCHG} is depended on V_{BIAS} . When V_{BIAS} is larger, R_{DCHG} is smaller.

$$V = V_{OUT(E)} \times e^{-t/\tau} \text{ or } t = \tau \ln (V_{OUT(E)} / V)$$

V: Output voltage during discharge

$V_{OUT(E)}$: Initial Output voltage

t: Discharge time

τ : $C_L \times R_{DCHG}$

<Low ESR Capacitor>

With the XC6603 series, a stable output voltage is achievable even if used with low ESR capacitors, as a phase compensation circuit is built-in. The output capacitor (C_L) should be connected as close to V_{OUT} pin and V_{SS} pin to obtain stable phase compensation. Values required for the phase compensation are as the table below.

For a stable power input, please connect a bias capacitor (C_{BIAS}) between the V_{BIAS} pin and the V_{SS} pin. Also, please connect an input capacitor (C_{IN}) between the V_{IN} pin and the V_{SS} pin. In order to ensure the stable phase compensation while avoiding run-out of values, please use the capacitor (C_{BIAS} , C_{IN} and C_L) which does not depend on bias or temperature too much. The table below (Figure 3) shows recommended values of C_{BIAS} , C_{IN} and C_L .

Figure 3: Recommended Values of C_{BIAS} , C_{IN} and C_L (MIN.)

OUTPUT VOLTAGE RANGE	BIAS CAPACITOR	INPUT CAPACITOR	OUTPUT CAPACITOR
$V_{OUT(T)}$	C_{BIAS}	C_{IN}	C_L
0.5V~1.8V	1.0 μ F	1.0 μ F	2.2 μ F

■ NOTES ON USE

1. For temporary, transitional voltage drop or voltage rising phenomenon, the IC is liable to malfunction should the ratings be exceeded.
2. Where wiring impedance is high, operations may become unstable due to noise and/or phase lag depending on output current. Please keep the resistance low for the V_{BIAS} , V_{IN} and V_{SS} wiring in particular.
3. Please wire the C_{BIAS} , C_{IN} and C_L as close to the IC as possible.
4. Capacitances of these capacitors (C_{BIAS} , C_{IN} , C_L) are decreased by the influences of bias voltage and ambient temperature. Care shall be taken for capacitor selection to ensure stability of phase compensation from the point of ESR influence.
5. When it is used in a quite small input / output dropout voltage, output may go into unstable operation. Please test it thoroughly before using it in production.
6. Torex places an importance on improving our products and their reliability.
We request that users incorporate fail-safe designs and post-aging protection treatment when using Torex products in their systems.

$V_{CE}=0V \rightarrow 3.6V (tr=5\mu s)$
 $C_L=10\mu F$, $C_{SS}=100pF$

XC6603A051xR-G

$V_{CE}=0V \rightarrow 3.6V (tr=5\mu s)$, $I_{OUT}=100mA$
 $C_L=10\mu F$, $C_{SS}=100pF$

XC6603A051xR-G

$V_{CE}=0V \rightarrow 3.6V (tr=5\mu s)$
 $C_L=10\mu F$, $C_{SS}=470pF$

XC6603A051xR-G

$V_{CE}=0V \rightarrow 3.6V (tr=5\mu s)$, $I_{OUT}=100mA$
 $C_L=10\mu F$, $C_{SS}=470pF$

XC6603A051xR-G

$V_{CE}=0V \rightarrow 3.6V (tr=5\mu s)$
 $C_L=10\mu F$, $C_{SS}=1nF$

XC6603A051xR-G

$V_{CE}=0V \rightarrow 3.6V (tr=5\mu s)$, $I_{OUT}=100mA$
 $C_L=10\mu F$, $C_{SS}=1nF$

TYPICAL PERFORMANCE CHARACTERISTICS (Continued)

* Unless otherwise stated, $V_{BIAS}=V_{CE}=3.6V$, $V_{IN}=V_{OUT(T)}+0.3V$, $I_{OUT}=1mA$, SS Pin=OPEN, $C_{BIAS}=C_{IN}=1.0\mu F$, $C_L=2.2\mu F$, $T_a=25^\circ C$

(13) CE Input Response (Continued)

PACKAGING INFORMATION

USP-6C

(unit : mm)

SOT-26W

(unit : mm)

● USP-6C Reference Pattern Layout (unit: mm)

● USP-6C Reference Metal Mask Design (unit: mm)

■ PACKAGING INFORMATION (Continued)

● USP-6C Power Dissipation

Power dissipation data for the USP-6C is shown in this page.
The value of power dissipation varies with the mount board conditions.
Please use this data as one of reference data taken in the described condition.

Evaluation Board (Unit: mm)

1. Measurement Condition (Reference data)

- Condition: Mount on a board
- Ambient: Natural convection
- Soldering: Lead (Pb) free
- Board: Dimensions 40 x 40 mm (1600 mm² in one side)
Copper (Cu) traces occupy 50% of the board area
In top and back faces
Package heat-sink is tied to the copper traces
- Material: Glass Epoxy (FR-4)
- Thickness: 1.6 mm
- Through-hole: 4 x 0.8 Diameter

2. Power Dissipation vs. Ambient temperature

Board Mount (T_j max = 125°C)

Ambient Temperature (°C)	Power Dissipation Pd (mW)	Thermal Resistance (°C/W)
25	1000	100.00
85	400

SOT-26W Power Dissipation

Power dissipation data for the SOT-26W is shown in this page.
 The value of power dissipation varies with the mount board conditions.
 Please use this data as one of reference data taken in the described condition.

1. Measurement Condition (Reference data)

- Condition: Mount on a board
- Ambient: Natural convection
- Soldering: Lead (Pb) free
- Board: Dimensions 40 x 40 mm (1600 mm² in one side)
 Copper (Cu) traces occupy 50% of the board area
 In top and back faces
 Package heat-sink is tied to the copper traces
 (Board of SOT-26 is used.)
- Material: Glass Epoxy (FR-4)
- Thickness: 1.6 mm
- Through-hole: 4 x 0.8 Diameter

Evaluation Board (Unit: mm)

2. Power Dissipation vs. Ambient temperature

Board Mount (T_j max = 125°C)

Ambient Temperature (°C)	Power Dissipation Pd (mW)	Thermal Resistance (°C/W)
25	600	166.67
85	240	

MARKING RULE

① represents product series

MARK	PRODUCT SERIES
S	XC6603A****-G

SOT-26W

② represents output voltage

MARK	OUTPUT VOLTAGE (V)	MARK	OUTPUT VOLTAGE (V)
A	0.5	K	1.2
B	0.6	L	1.3
C	0.7	M	1.4
D	0.8	N	1.5
E	0.9	P	1.6
F	1.0	R	1.7
H	1.1	S	1.8

③④ represents production lot number

01 to 09, 0A to 0Z, 11 to 9Z, A1 to A9, AA to Z9, B1 to ZZ in order.
(G, I, J, O, Q, W excluded)

*No character inversion used.

MARKING RULE (Continued)

① represents product series

MARK	PRODUCT SERIES
S	XC6603*****-G

② represents regulator type

MARK	PRODUCT SERIES
A	XC6603A*****-G

USP-6C

③ represents output voltage

MARK	OUTPUT VOLTAGE (V)	MARK	OUTPUT VOLTAGE (V)
A	0.5	K	1.2
B	0.6	L	1.3
C	0.7	M	1.4
D	0.8	N	1.5
E	0.9	P	1.6
F	1.0	R	1.7
H	1.1	S	1.8

④⑤ represents production lot number

01 to 09, 0A to 0Z, 11 to 9Z, A1 to A9, AA to Z9, B1 to ZZ in order.
(G, I, J, O, Q, W excluded)

*No character inversion used.

1. The products and product specifications contained herein are subject to change without notice to improve performance characteristics. Consult us, or our representatives before use, to confirm that the information in this datasheet is up to date.
2. We assume no responsibility for any infringement of patents, patent rights, or other rights arising from the use of any information and circuitry in this datasheet.
3. Please ensure suitable shipping controls (including fail-safe designs and aging protection) are in force for equipment employing products listed in this datasheet.
4. The products in this datasheet are not developed, designed, or approved for use with such equipment whose failure or malfunction can be reasonably expected to directly endanger the life of, or cause significant injury to, the user.
(e.g. Atomic energy; aerospace; transport; combustion and associated safety equipment thereof.)
5. Please use the products listed in this datasheet within the specified ranges.
Should you wish to use the products under conditions exceeding the specifications, please consult us or our representatives.
6. We assume no responsibility for damage or loss due to abnormal use.
7. All rights reserved. No part of this datasheet may be copied or reproduced without the prior permission of TOREX SEMICONDUCTOR LTD.
