

Features

- AEC-Q100 qualified for automotive application
- Temperature Grade 1: -40°C to 125°C Ambient Operating Temperature Range
- Device HBM ESD Classification Level Class3A
- Operating Voltage: 4.5V~45V
- Adjustable and 5.0V Versions
- Minimum Drop Out 1.5V
- Fixed 150KHz Switching Frequency
- 2A Constant Output Current Capability
- Internal Optimize Power Transistor
- TTL shutdown capability
- Built in thermal shutdown function
- Built in current limit protection function
- Built in output short protection function
- Available in SOP8-EP package

General Description

The XL1509Q is an AEC-Q100 qualified , 150 KHz fixed frequency buck DC/DC converter, capable of driving a 2A load with high voltage, high efficiency. The XL1509Q supports wide input operating voltage range of 4.5V ~ 45V and a maximum duty cycle of 100% output. A built-in loop compensation module reduces components in the system, lowering power system cost and reducing printed circuit board space.

The XL1509Q is available in adjustable and fixed 5.0V versions. The XL1509Q has built-in thermal shutdown, current limit protection and output short protection function and so on. When the output short protection function happens, the operation frequency will be reduced about from 150KHz to 30KHz.

Applications

- Vehicle Mounted Device
- Industrial and Motor Control
- Networking Equipment

Typical application schematic

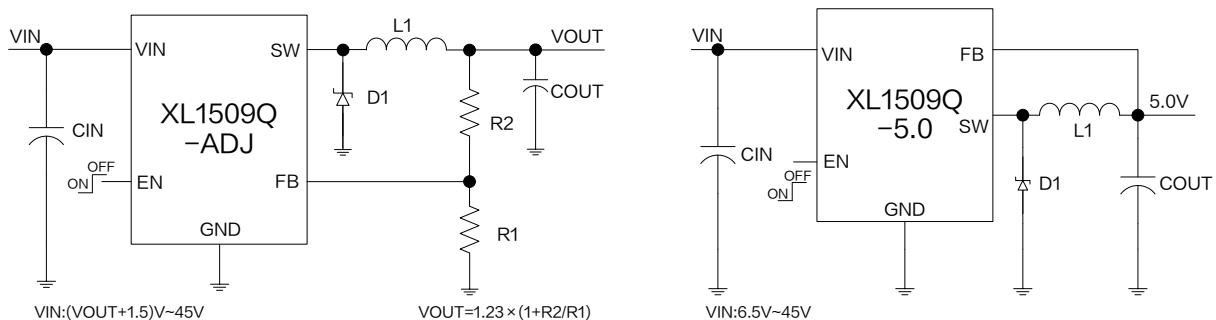

Figure1.XL1509Q Typical application schematic

Pin Configurations

VIN	1	8	GND
SW	2	7	GND
FB	3	6	GND
EN	4	5	GND

Figure2. Pin Configuration of XL1509Q

Table 1. Pin Description

Pin Number	Pin Name	Description
1	VIN	Supply Voltage Input Pin. XL1509Q DC operating voltage range from a 4.5V to 45V. Bypass VIN to GND with a suitably large capacitor to eliminate noise on the input.
2	SW	Power Switch Output Pin (SW). Output is the switch node that supplies power to the output.
3	FB	Feedback Pin (FB). Through an external resistor divider network, detects the output voltage for adjustment, with an adjustable version reference voltage of 1.23V.
4	EN	Enable Pin. Drive EN pin low to turn on the device, drive it high to turn it off. Floating is default low.
5~8	GND	Ground Pin.

Ordering Information

Order Information	Marking ID	Package Type	Eco Plan	Packing Type Supplied As

Absolute Maximum Ratings(Note1)

Parameter	Symbol	Value	Unit
Input Voltage	V_{IN}	-0.3~50	V
Feedback Pin Voltage	V_{FB}	-0.3~20	V
EN Pin Voltage	V_{EN}	-0.3~7	V
Output Switch Pin Voltage	V_{SW}	-0.3~ V_{IN}	V
Thermal Resistance (SOP8-EP) (Junction to Ambient, No Heatsink, Free Air)	R_{JA}	60	°C/W
Operating Junction Temperature	T_J	-40~150	°C
Storage Temperature	T_{STG}	-40~150	°C
Lead Temperature (Soldering, 10 sec)	T_{LEAD}	260	°C

Note1: Stresses greater than those listed under Maximum Ratings may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operation is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

Reliability Parameter Indicator (Note 2)

Thermal shutdown function

To prevent damage to the chip due to overheating, the XL1509Q is designed with thermal shutdown protection. When the junction temperature of the chip exceeds 170°C, it will enter the thermal shutdown state and turn off the output. When the temperature drops to 40°C below the threshold, the chip will automatically resume operation.

Current limit protection function

The switching current limit prevents excessive currents that may be generated if the inductor is saturated or the output circuit is overloaded. The XL1509Q is designed with current-limit protection, and the output current is limited to about 3A, as shown in Figure 26.

Figure26. Output current limiting waveform ($V_{IN}=12V$, V_{OUT} set to 5.0V)

Output short protection function

In order to avoid the output short circuit and damage the chip, XL1509Q is designed with a short circuit protection function. When an output short circuit is detected and the short circuit protection function is enabled, the switching frequency is reduced from 150KHz to about 30KHz, which reduces the output voltage and limits the output current, as shown in Figure 27.

Figure26. Output short circuit waveform ($V_{IN}=12V$, V_{OUT} set to 5.0V)

Note2: Reliability parameter indicators are guaranteed by one or more of the methods of production testing, characterization, or design.
