1.0 Basic Specification

1.1 Display and Mechanical Specification

ITEM	STANDARD VALUE	UNIT
Display Type	160 X 64	Dots
LCD Type	FSTN/ Transflective/Positive	--
LCD Duty	1/64	--
LCD Bias	1/9	Bias
Viewing Direction	6:00	Clock
Backlight Type	White Color LED Backlight with frame	--
Interface	6800/8080 series or Serial Interface	--
Driver IC	ST7528 (Gold Bump Chip)	--
IC Package	COG	--
Module Dimension	56.4(W)×32.9(H) ×5.20(T) (MAX)	mm
Visual Area	52.00(W) ×22.00(H)	mm
Dot size	0.28 ×0.28	mm
Dot Pitch	0.30 ×0.30	mm
Operating Temperature	-20 ~ 70	°C
Storage Temperature	-30 ~ 80	°C

1.2 Block Diagram

1.3 Terminal Functions

Pin No.	Pin Name	I/O	Descriptions							
1	LED+	Supply	Positive Supply for LED backlight							
2	LED+	Supply	Positive Supply for LED backlight							
3	LED-	Supply	Negative Supply for LED backlight							
4	LED-	Supply	Negative Supply for LED backlight							
5	PS0	I	Parallel/Serial data input select input							
6	PS1		PS2	PS1	PS0	Interface mode	Data/Command	Data	Read/Write	Serial Clock
7	PS2		L	L	H	Parallel 80	A0	DB0 to DB7	RD/WR	-
			L	H	H	Parallel 68	A0	DB0 to DB7	E/RW	-
			L	L	L	3Line Serial	-	S1D(DB7)	Write only	SCLK(DB6)
			L	H	L	4Line Serial	A0	S1D(DB7)	Write only	SCLK(DB6)
		H	L	L	IIC Serial	-	SDA	Read/Write	SCL	
Note: In 4-Line, 3-Line and IIC serial mode, it is impossible to read data from the on-chip RAM.										
8	CSB	I	Chip Select input pins Data/instruction I/O is enabled only when CSB is "L". When chip select is non-active , DB0 to DB7 may be high impedance.							
9	RST	I	Reset input pin When RESETB is "L", initialization is executed.							
10	A0	I	Register select input pin -A0 = "H" : DB0 to DB7 are display data. -A0 = "L" : DB0 to DB7 are control data.							
11	RW_WR	I	Read/ Write execution control pin							
			PS1	MPU type	RW_WR	Description				
			H	6800-series	RW	Read/Write control input pin RW = "H": read RW= "L": write				
L	8080-series	/WR	Write enable clock input pin The data o DB0 to DB7 are latched at the rising edge of the /WR signal.							

12	E_RD	I	Read/ Write execution control pin			
			PS1	MPU type	E_RD	Description
			H	6800-series	E	Read/Write control input pin When RW = "H" E is "H", DB0 to B7 are in an output status. When RW="L": The data on DB0 to DB7 are latched at the falling edge of the E signal.
L	8080-series	/RD	Read enable clock input pin When /RD is "L", DB0 to DB7 are in an output Status.			
13-20	DB0-DB7	I/O	This is an 8-bit bi-directional data bus that connects to an 8-bit or 16-bit standard MPU data bus. When the serial interface is selected (P/S="L"), then DB7 serves as the serial data input terminal (SI) and DB6 serves as the serial clock input terminal (SCL). At this time, DBO-DB5 are set to high impedance. When the chip select is inactive, DB0-DB7 are set to high impedance.			
21	VDD	Supply	Positive Power Supply			
22	VSS	Supply	Ground			
23	VOUT_OUT	Supply	If the internal Vout voltage generator is used , the VOUT_IN & VOUT_OUT must be connected together. If an external supply is used , this pin must be left open.			
24	VOUT_IN	Supply	An external Vout supply voltage can be supplied using the VOUT_IN pad. In this case, VOUT_OUT Has to be left open, and the internal voltage generator has to be programmed to zero.			
25	VR	I	V0 voltage adjustment pin It is valid only when on-chip resistors are not used (INTRS = "L") When using internal resistors (INTRS = "H"),open this pin			
26	V4	I/O	LCD driver supply voltages. The voltage determined by LCD cell is impedance-converted by a resistive driver or and according to the following relationship: $VDD (=V_0) \geq V_1 \geq V_2 \geq V_3 \geq V_4 \geq VSS$ When the on-chip operating power circuit is on the following voltages are supplied to V1 to V4 by the on-chip power circuit.			
27	V3					
28	V2					
29	V1					
30	V0					

1.4 Mechanical Drawing

NOTE:

- 1.DISPLAY TYPE: FSMA-POSITIVE mode
- 2.LCD POLARIZER TYPE: TRANSPARENT
- 3.LCD BACK LIGHT: WHITE
- 4.LCD OPERATING VOLTAGE: VDD=3.0V, VDD0=10.0V
- 5.OPERATING TEMP: -20~+70°C
- 6.STORAGE TEMP: -30~+80°C
- 7.LCD CONNECTOR: COG/FPC+BL
- 8.DISPLAY DRIVER: ST7528
- 9.Operating temperature tolerance is ±0.20mm
- 10.LCD Connector
- 11.RoHS Request

2. Absolute Maximum Ratings

Items	Symbol	Min	Max.	Unit	Condition
Supply Voltage (Logic)	V_{DD-VSS}	-0.5	+3.6	V	$V_{SS}=0V$
Supply Voltage (LCD Driver)	V_{OUT_IN}	-0.5	20	V	$V_{SS}=0V$
Input Voltage	V_{IN}	-0.5	$V_{DD}+0.5$	V	$V_{SS}=0V$
Operating Temperature	T_{OP}	-20	+70	°C	No Condensation
Storage Temperature	T_{ST}	-30	+80	°C	No Condensation

Cautions:

Any stresses exceeding the Absolute Maximum Ratings may cause substantial damage to the device. Functional operation of this device at other conditions beyond those listed in the specification is not implied and prolonged exposure to extreme conditions may affect device reliability.

3. Electrical Characteristics

3.1 DC Characteristics

Items	Symbol	Min	Typ.	Max.	Unit	Condition
Supply Voltage (Logic)	V_{DD-VSS}	2.7	3.0	3.3	V	
Supply Voltage (LCD Driver)	V_O	--	--	--	V	--
		--	10.0	--		25°C
		--	--	--		--
Input Voltage	V_{IH}	$0.7 V_{DD}$	--	V_{DD}	V	--
	V_{IL}	V_{SS}	--	$0.3 V_{DD}$		
Logic Supply Current	I_{DD}	--	--	0.7	mA	$V_{DD-VSS}=3.0V$

3.2 LED Backlight Circuit Characteristics

Items	Symbol	MIN	TYP.	MAX.	Unit	Application pin
Forward Voltage	V_{fLED+}	-	2.1	-	V	LED+
Forward Current	I_{fLED+}	-	60	80	mA	LED+

Cautions:

Exceeding the recommended driving current could cause substantial damage to the backlight and shorten its lifetime.

4. IC Contents Attachment:

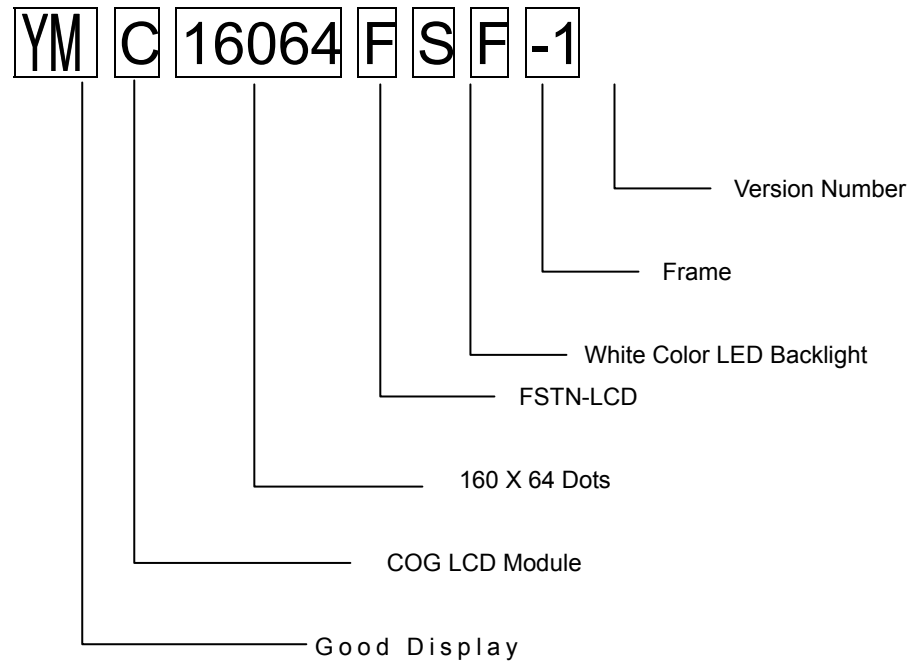

Reference Documents from SITRONIX ST7528_2.3V LCD Driver.

6. Design and Handling Precaution

- 1.0 The LCD panel is made by glass. Any mechanical shock (eg. dropping from high place) will damage the LCD module.
- 2.0 Do not add excessive force on the surface of the display, which may cause the Display color change abnormally.
- 3.0 The polarizer on the LCD is easily get scratched. If possible, do not remove the LCD protective film until the last step of installation.
- 4.0 Never attempt to disassemble or rework the LCD module.
- 5.0 Only Clean the LCD with Isopropyl Alcohol or Ethyl Alcohol. Other solvents (eg. water) may damage the LCD.
- 6.0 When mounting the LCD module, make sure that it is free from twisting, warping and distortion.
- 7.0 Ensure to provide enough space (with cushion) between case and LCD panel to prevent external force adding on it, or it may cause damage to the LCD or degrade the display result.
- 8.0 Only hold the LCD module by its side. Never hold LCD module by adds force on the heat seal or TAB.
- 9.0 Never add force to component of the LCD module. It may cause invisible damage or degrade of the reliability.
- 10.0 LCD module could be easily damaged by static electricity. Be careful to maintain an optimum anti-static work environment to protect the LCD module.
- 11.0 When peeling off the protective film from LCD, static charge may cause abnormal display pattern. It is normal and will resume to normal in a short while.
- 12.0 Take care and prevent get hurt by the LCD panel sharp edge.
- 13.0 Never operate the LCD module exceed the absolute maximum ratings.
- 14.0 Keep the signal line as short as possible to prevent noisy signal applying to LCD module.
- 15.0 Never apply signal to the LCD module without power supply.
- 16.0 IC chip (eg. TAB or COG) is sensitive to the light. Strong lighting environment could Possibly cause malfunction. Light sealing structure casing is recommend.
- 17.0 LCD module reliability may be reduced by temperature shock.
- 18.0 When storing the LCD module, avoid exposure to the direct sunlight, high humidity, high temperature or low temperature. They may damage or degrade the LCD module
