CMOS Z8® 8-BIT MCU
KEYBOARD CONTROLLER

FEATURES

ROM (Kbytes)	RAM* (Bytes)	I/O Lines	Speed (MHz)	Pin Count / Package
4	236	32	5	40 DIP 44 PLCC 44 QFP

* General-Purpose

n 4.5- to 5.5-Volt Operating Range

n 0°C to 70°C Operating Temperature Range

n Expanded Register File

n Low-Power Consumption: 30 mW @ 5 MHz Typical

n Six Vectored, Priority Interrupts from Six Different Sources

n Two Programmable 8-Bit Counter/Timers, Each with 6-Bit Programmable Prescaler

n Power-On Reset (POR) Timer, Hardware Watch-Dog Timer (WDT)

n Digital Inputs CMOS Levels with Internal Pull-Up Resistors

n Four Direct Connect LED Drive Ports

n On-Chip RC Oscillator, 4 MHz to 5 MHz

GENERAL DESCRIPTION

The Z86C15 Keyboard Controller is a full-featured member of the Z8® microcontroller family offering a unique register-to-register architecture that avoids accumulator bottlenecks and is more code efficient than RISC processors.

For applications demanding powerful I/O capabilities, the Z86C15 provides 32 pins dedicated to input and output. These lines are grouped into four ports, each port consisting of eight lines, and are configurable under software control to provide timing, status signals, and serial or parallel I/O ports.

Two on-chip counter/timers, with a large number of user-selectable modes, are available to relieve the system of administering real-time tasks, such as counting/timing and I/O datacommunications.

Six different internal or external interrupt sources are maskable and prioritized so a vectored address is provided for efficient interrupt subroutine handling and multitasking functions.

The Z86C15 achieves low-EMI by means of several modifications in the output drivers and clock circuitry of the device.

By means of an expanded register file, the designer has access to three additional system control registers that provide extra peripheral devices, I/O ports, and register addresses (see Functional Block Diagram).
Notes:
All Signals with a preceding front slash, "/", are active Low, e.g., B//W (WORD is active Low); /B/W (BYTE is active Low, only).
Power connections follow conventional descriptions below:

Connection	Circuit	Device
Power	V_{CC}	V_{DD}
Ground	GND	V_{SS}

ABSOLUTE MAXIMUM RATINGS

| Symbol	Description	Min	Max	Units
V_{CC}	Supply Voltage*	−0.3	+7.0	V
T_{STG}	Storage Temp	−65	+150	°C
T_A	Oper Ambient Temp	0	+105	°C

Notes:
* Voltage on all pins with respect to GND.

Stresses greater than those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only; operation of the device at any condition above those indicated in the operational sections of these specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

STANDARD TEST CONDITIONS

Standard Test Conditions. The characteristics listed here apply for standard test conditions as noted. All voltages are referenced to GND. Positive current flows into the referenced pin (Test Load).
