Description

This optical receiver is designed for SDI (Serial Digital Interface) digital television transmission systems where optical fiber replaces coaxial cable, to increase transmission distance. It is designed in conjunction with the ANSI/SMPTE 259 M standard and is capable of handling DC-unbalanced (pathological) signals.

The receiver operates at 3.3 V and contains an InGaAs PIN photodiode and a transimpedance amplifier with AGC (Automatic Gain Control), assembled in a TO-46 package. Its double-lens optical system is designed for use with single-mode fiber as well as multi-mode fiber with a core diameter up to 62.5 μm . Reliability assurance is based on Telecordia GR-468-CORE.

Test conditions: 25°C Case Temperature/3.3 V Supply Voltage. Fiber: Single-mode to multi-mode 62.5/125 μ m

Note 1: $P_f = 2 \mu$ W Peak-Peak power at 10 MHz/50% duty cycle.

Note 2: $P_f = 500 \mu$ W Peak-Peak power at 10 MHz/50% duty cycle.

Note 3: Measured using DC-unbalanced patterns with 5% and 95% duty cycles, respectively at 270 Mbps.

Note 4: An OMA value has been quoted as this is more meaningful for DC unbalanced signals.

Note 5: Measured with a DC balanced signal with a $2^{23}-1$ PRBS at 270 Mbps.

Application Guidelines

ESD Handling

The receiver is sensitive to electrostatic discharges. When handling the device, precaution for ESD sensitive devices should be taken. These precautions include use of ESD protected work area with wrist straps, controlled work benches, floors etc.

Power Supply Filter

Power Supply decoupling capacitors are recommended for optimal performance of the receiver. A filter is recommended to minimise power supply noise. See Figure 6.
