

Ultralow Noise Microphone with Top Port and Analog Output

DESCRIPTION

The ZTS6016 is a high quality, low cost, low power analog output top-ported omni-directional MEMS microphone. ZTS6016 consists of a MEMS microphone element and an preamplifier. ZTS6016 has a high SNR and flat wideband frequency response, resulting in natural sound with high intelligibility. Due to built-in filter, ZTS6016 shows high immunity to EMI.

The ZTS6016 is available in a thin 3.10mm × 2.50mm × 1.00mm surface-mount package. It is reflow solder compatible with no sensitivity degradation. The ZTS6016 is halide free.

APPLICATIONS

- Mobile telephones
- PDAs
- Digital video cameras
- Portable media devices with audio input

ORDERING INFORMATION

PART	RoHS	Ship, Quantity
ZTS6016	Yes	Tape and Reel, 5.2K

FEATURES

- 3.10mm×2.50mm×1.00mm surface-mount package
- Stable sensitivity over power supply range of 1.5V-3.6V
- SNR of 60dBA
- Sensitivity of -42dBV
- Low current consumption of <100µA
- Multi Chip Module (MCM) Package

Pins Configuration and Description

Typical Applications

The ZTS6016 output can be connected to a codec microphone input or to a high input impedance gain stage. A dc-blocking capacitor is required at the output of the microphone.

Absolute Maximum Ratings

Supply Voltage (VDD)	-0.5V to +4.5V
OUT to GND	-0.3V to V _{DD} +0.3V
Input Current to Any Pin	±5mA
Mechanical Shock	10000g
Vibration	Per MIL-STD-883 Method 2007, Test Condition B
Temperature Range	-40°C to +100°C

CAUTION: Stresses above those listed in “Absolute Maximum Ratings” may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.

Electro-Static Discharge Sensitivity

This integrated circuit can be damaged by ESD. It is recommended that all integrated circuits be handled with proper precautions. Failure to observe proper handling and installation procedures can cause damage. ESD damage can range from subtle performance degradation to complete device failure.

RECOMMENDED CUSTOMER LAND PATTERN

The recommended PCB land pattern for the ZTS6016 should have a 1:1 ratio to the solder pads on the microphone package. Care should be taken to avoid applying solder paste to the sound hole in PCB. The dimensions of suggested solder paste pattern refer to the land pattern.

PCB Land Pattern Layout (Dimensions Shown in mm).

Suggested Solder Paste Stencil Pattern Layout.

SOLDER FLOW PROFILE

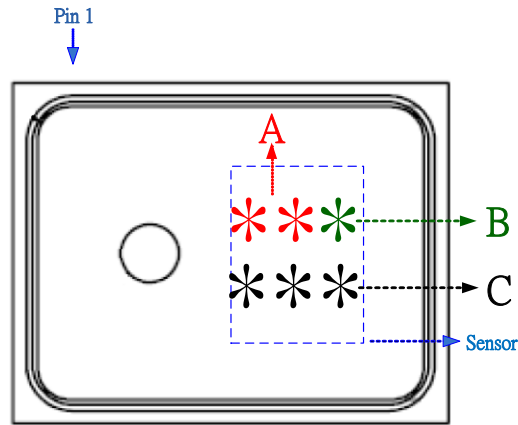

The reflow profile specified in this section describes expected maximum heat exposure of components during the reflow process of NMP product PWBs. Temperature is measured on top of component. All components have to tolerate at least this profile five times (5x) without affecting electrical performance, mechanical performance or reliability.

Pb-free and Sn63/Pb37 reflow profile requirements for soldering heat resistance:

Pick and place guidelines of process

Rules of cleaning

Due to Clean the PCBA gap will make MEMS Mic. unit work improperly, please do not clean it by way of ultrasonic or use any cleaning solution to wash the soldered MEMS Mic. unit. If the PCB need to be cleaned, please seal with a tape on the both side of the acoustic hole to avoid foreign material and liquid invaded.

MEMS Mic. is a electro-acoustic component which rely on its diaphragm vibrate in response to sound pressure, so that the sound pressure can be converted to electrical signals; Base on the above , If any cleaning liquid inject the Mic. unit, the vibrate spacing of the diaphragm would be constrained. As a result of that, if the diaphragm cannot vibrate well, it will make the output signal smaller or even no output.

Rules of the pressure of vacuum nozzle

If the Vacuum nozzle pressure is much more on the metal cap, it will directly affect the displacement of the diaphragm structure. When the displacement pressure is greater than the Max input sound pressure, the diaphragm will be damaged or cracked.

Note that Vacuum nozzle pressure cannot greater than 7PSI.

1K Pa = 0.145 pounds (lb / in2) = 0.0102 KGF / CM2 = 0.0098 atm.

Rules of protection measurement

- 1 · Please do not let the vacuum nozzle suck the microphone acoustic hole.
- 2 · Do not vacuum the anti-static bag when repackaging the MEMS Mic..
- 3 · Do not blow the acoustic hole when cleaning the PCBA with air gun.

Rules of the placement of vacuum nozzle

When pick and place the Mic. unit, the SMT Vacuum Tube should be placed in the center of the left and right sides of Mic. unit and keeps 0.5mm from the edge of the acoustic hole.

This pick and place guidelines can apply to all series of ZillTek Top-Port MEMS Mic. products.
