

Description

The ZXGD3103 is intended to drive MOSFETS configured as ideal diode replacements. The device is comprised of a differential amplifier detector stage and high current driver. The detector monitors the reverse voltage of the MOSFET such that if body diode conduction occurs a positive voltage is applied to the MOSFET's Gate pin.

Once the positive voltage is applied to the Gate the MOSFET switches on allowing reverse current flow. The detectors' output voltage is then proportional to the MOSFET Drain-Source reverse voltage drop and this is applied to the Gate via the driver. This action provides a rapid turn off as current decays.

Applications

Flyback Converters in:

- Low Voltage AC/DC Adaptors
- LED TV, Monitors, Set Top Boxes

Resonant Converters in:

- Higher Power PSU - Telecoms and Server PSU
- Computing Power Supplies – ATX and Server PSU
- Street Lighting

Features

- 5 to 15V V_{CC} Range
- Operation Up to 250kHz
- 180V Drain Voltage Rating
- Proportional Gate Drive to Minimize Body Diode Conduction
- Turn-off Propagation Delay 15ns and Turn-off Time 20ns
- Detector Threshold Voltage ~10mV
- Standby Current 5mA
- Suitable for Discontinuous Mode (DCM), Critical Conduction Mode (CrCM) and Continuous Mode (CCM) Operation
- **Totally Lead-Free & Fully RoHS Compliant (Notes 1 & 2)**
- **Halogen and Antimony Free. "Green" Device (Note 3)**

Mechanical Data

- Case: SO-8
- Case material: Molded Plastic. "Green" Molding Compound
UL Flammability Rating 94V-0
- Moisture Sensitivity: Level 1 per J-STD-020
- Terminals: Finish - Matte Tin Plated Leads, Solderable per MIL-STD-202, Method 208
- Weight: 0.074 grams (Approximate)

Pin Name	Pin Function
GND	Ground
V_{CC}	Power Supply
GATEL	Gate Turn off
GATEH	Gate Turn on
BIAS	Bias connection
DRAIN	Drain Sense
REF	Reference
DNC	Do not connect

Ordering Information (Note 4)

Product	Marking	Reel Size (inches)	Tape Width (mm)	Quantity per Reel
ZXGD3103N8TC	ZXGD3103	13	12	2,500

- Notes:
1. No purposely added lead. Fully EU Directive 2002/95/EC (RoHS) & 2011/65/EU (RoHS 2) compliant.
 2. See http://www.diodes.com/quality/lead_free.html for more information about Diodes Incorporated's definitions of Halogen- and Antimony-free, "Green" and Lead-free.
 3. Halogen- and Antimony-free "Green" products are defined as those which contain <900ppm bromine, <900ppm chlorine (<1500ppm total Br + Cl) and <1000ppm antimony compounds.
 4. For packaging details, go to our website at <http://www.diodes.com/products/packages.html>.

Marking Information

- 3103 = Product Type Marking Code, Line 2
- YY = Year (ex: 16 = 2016)
- WW = Week (01 to 53)

Functional Block Diagram

Pin Functions

Pin Number	Pin Name	Pin Function and Description
1	DNC	Do not connect Leave pin floating
2	REF	Reference This pin is connected to V_{CC} via resistor, R_{REF}
3	GATEL	Gate turn off This pin sinks current, I_{SINK} , from the synchronous MOSFET Gate
4	GATEH	Gate turn on This pin sources current, I_{SOURCE} , to the synchronous MOSFET Gate
5	Vcc	Power Supply This is the supply pin. It is recommended to decouple this point to ground closely with a ceramic capacitor.
6	GND	Ground This is the Ground reference point. Connect to the synchronous MOSFET Source terminal.
7	BIAS	Bias This pin is connected to V_{CC} via resistor R_{BIAS}
8	DRAIN	Drain Connection Connect this pin to the synchronous MOSFET drain terminal.

Absolute Maximum Ratings (Voltage relative to GND, @ $T_A = +25^\circ\text{C}$, unless otherwise specified.)

Characteristic	Symbol	Value	Unit
Supply Voltage	V_{CC}	15	V
Continuous Drain Pin Voltage	V_D	-3 to 180	V
GATEH and GATEL Output Voltage	V_G	-3 to $V_{CC} + 3$	V
Gate Driver Peak Source Current	I_{SOURCE}	2.5	A
Gate Driver Peak Sink Current	I_{SINK}	6	A
Reference Current	I_{REF}	25	mA
Bias Voltage	V_{BIAS}	V_{CC}	V
Bias Current	I_{BIAS}	100	mA

Thermal Characteristics (@ $T_A = +25^\circ\text{C}$, unless otherwise specified.)

Characteristic	Symbol	Value	Unit	
Power Dissipation Linear Derating Factor	P_D	(Note 5)	490	mW mW/ $^\circ\text{C}$
		(Note 6)	3.92

		(Note 8)	159	
Thermal Resistance, Junction to Lead	$R_{\theta JL}$	135	$^\circ\text{C/W}$	
Operating Temperature Range	T_J	-40 to +150	$^\circ\text{C}$	
Storage Temperature Range	T_{STG}	-55 to +150	$^\circ\text{C}$	

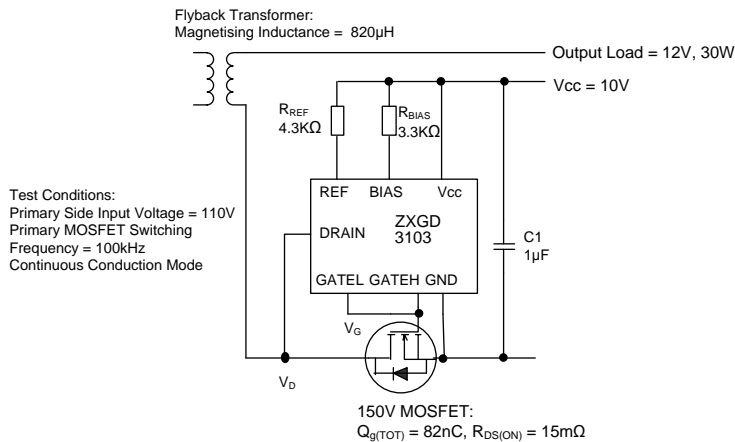

ESD Ratings (Note 10)

Characteristic	Symbol	Value	Unit	JEDEC Class
Electrostatic Discharge - Human Body Model	ESD HBM	2,000	V	2
Electrostatic Discharge - Machine Model	ESD MM	300	V	B

- Notes:
5. For a device surface mounted on minimum recommended pad layout FR-4 PCB with high coverage of single sided 1oz copper, in still air conditions; the device is measured when operating in a steady-state condition.
 6. Same as Note 5, except pin 5 (V_{CC}) and pins 6 (PGND) are both connected to separate 5mm x 5mm 1oz copper heat-sinks.
 7. Same as Note 6, except both heat-sinks are 10mm x 10mm.
 8. Same as Note 6, except both heat-sinks are 15mm x 15mm.
 9. Thermal resistance from junction to solder-point at the end of each lead on pin 6 (GND) and pin 5 (V_{CC}).
 10. Refer to JEDEC specification JESD22-A114 and JESD22-A11.

Thermal Derating Curve

Electrical Characteristics (@ $V_{CC} = 10V$, $T_A = +25^\circ C$, $R_{BIAS} = 3.3k\Omega$, $R_{REF} = 4.3k\Omega$, unless otherwise specified.)

Characteristic	Symbol	Min	Typ	Max	Unit	Test Condition
Input Supply						
Operating Current	I_{OP}	—	2.16	—	mA	$V_D \leq -200mV$
		—	5.16	—	mA	$V_D \geq 0mV$
Gate Driver						
Turn-off Threshold Voltage	V_T	-16	-10	0	mV	$V_G = 1V$, $R_H = 100k\Omega$, $R_L = o/c$
Gate Output Voltage	$V_{G(OFF)}$	—	0.73	1	V	$V_D \geq 0mV$, $R_H = 100k\Omega$, $R_L = o/c$
	V_G	6	7.2	—		$V_D = -50mV$, $R_H = o/c$, $R_L = 100k\Omega$
	V_G	8.8	9.2	—		$V_D = -100mV$, $R_H = o/c$, $R_L = 100k\Omega$
	V_G	9.2	9.4	—		$V_D \leq -150mV$, $R_H = o/c$, $R_L = 100k\Omega$
	V_G	9.3	9.5	—		$V_D \leq -200mV$, $R_H = o/c$, $R_L = 100k\Omega$
Switching Performance

Typical Application Circuits

The purpose of the ZXGD3103 is to drive a MOSFET as a low- V_F Schottky diode replacement in offline power converters. When combined with a low $R_{DS(ON)}$ MOSFET, it can yield significant power efficiency improvement, whilst maintaining design simplicity and incurring minimal component count. Figure 1 and 2 show typical configuration of ZXGD3103 for synchronous rectification in a Flyback and a multiple output resonant converter.

Figure 1. Example Connections in Flyback Supply

Figure 2. Example Connections in LLC Supply

Operation in Typical Application

The operation of the device is described step-by-step with reference to the timing diagram in Figure 3.

1. The detector monitors the MOSFET Drain-Source voltage.
2. When, due to transformer action, the MOSFET body diode is forced to conduct there is approximately -0.8V on the Drain pin.
3. The detector outputs a positive voltage with respect to ground, this voltage is then fed to the MOSFET driver stage and current is sourced out of the GATE pin.
4. The controller goes into proportional gate drive control — the GATE output voltage is proportional to the on-resistance-induced Drain-Source voltage drop across the MOSFET. Proportional gate drive ensures that MOSFET conducts for majority of the conduction cycle and minimizes body diode conduction time.
5. As the Drain current decays linearly toward zero, proportional gate drive control reduces the Gate voltage so the MOSFET can be turned off rapidly at zero current crossing. The GATE voltage is removed when the Drain-Source voltage crosses the detection threshold voltage to minimize reverse current flow.
6. At zero Drain current, the controller GATE output voltage is pulled low to $V_{G(OFF)}$ to ensure that the MOSFET is off.

Figure 3 shows typical operating waveforms for ZXGD3103 driving a MOSFET with $Q_{g(TOT)} = 82nC$ in a Flyback converter operating in critical conduction mode.

Design Considerations

It is advisable to decouple the ZXGD3103 closely to V_{CC} and ground due to the possibility of high peak gate currents with a 1 μ F X7R type ceramic capacitor as shown in Figure 2. The Gate pins should be as close to the MOSFET's gate as possible. Also the ground return loop should be as short as possible.

To minimize parasitic inductance-induced premature turn-off issue of the synchronous controller always keep the PCB track length between ZXGD3101's Drain input and MOSFET's Drain to less than 10mm. Low internal inductance MOSFET packages such as SO-8 and PolarPak are also recommended for high switching frequency power conversion to minimize body diode conduction.

R4, Q2, D1 and C1 in Figure 1 are only required as a series drop-down regulator to maintain a stable V_{CC} around 10V from a power supply output voltage greater than 15V.

External gate resistors are optional. They can be inserted to control the rise and fall time which may help with EMI issues.

The proper selection of external resistors R_{REF} and R_{BIAS} is important to the optimum device operation. Select a value for resistor R_{REF} and R_{BIAS} from Table 1 based on the desired V_{CC} value. This provides the typical ZXGD3103's detection threshold voltage of 10mV.

Table 1. Recommended Resistor Values for Various Supply Voltages

V_{CC}	R_{BIAS}	R_{REF}
5V	1K6	2K0
10V	3K3	4K3
12V	3K9	5K1
15V	5K1	6K8

LIFE SUPPORT

Diodes Incorporated products are specifically not authorized for use as critical components in life support devices or systems without the express written approval of the Chief Executive Officer of Diodes Incorporated. As used herein:

A. Life support devices or systems are devices or systems which:

1. are intended to implant into the body, or
2. support or sustain life and whose failure to perform when properly used in accordance with instructions for use provided in the labeling can be reasonably expected to result in significant injury to the user.

B. A critical component is any component in a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or to affect its safety or effectiveness.

Customers represent that they have all necessary expertise in the safety and regulatory ramifications of their life support devices or systems, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of Diodes Incorporated products in such safety-critical, life support devices or systems, notwithstanding any devices- or systems-related information or support that may be provided by Diodes Incorporated. Further, Customers must fully indemnify Diodes Incorporated and its representatives against any damages arising out of the use of Incorporated products in such safety-critical, life support devices or systems.
