

## 8-BIT SINGLE-CHIP MICROCONTROLLER

### DESCRIPTION

The  $\mu$ PD78P064B is a product of  $\mu$ PD78064B subseries in 78K/0 series, in which the on-chip mask ROM of the  $\mu$ PD78064B is replaced by one-time PROM.

As program write by user is possible, the  $\mu$ PD78P064B is best suited for evaluation, short-run and multiple-device production, and early rise upon system development.

Functions are described in detail in the following User's Manuals, which should be read when carrying out design work.

$\mu$ PD78064B Subseries User's Manual: U10785E  
 78K/0 Series User's Manual Instruction: U12326E

### FEATURES

- Pin compatible with mask ROM products (except the  $V_{PP}$  pin)
- Internal PROM: 32K bytes  
One-time programming possible (most suitable for small-scale production)
- Internal high-speed RAM: 1024 bytes
- LCD display RAM:  $40 \times 4$  bits
- Operable in the same supply voltage as mask ROM products ( $V_{DD} = 2.0$  to  $6.0$  V)
- Corresponding to QTOP™ microcomputers

**Remarks 1.** For the differences between PROM products and mask ROM products, refer to **1. DIFFERENCES BETWEEN  $\mu$ PD78P064B AND MASK ROM PRODUCTS.**

- 2.** QTOP Microcomputer is the general name for a total support as far as writing service, marking, screening, and verification after programming one-time PROM internal signal-chip microcontroller offered by NEC.

### ORDERING INFORMATION

	Part Number	Package	On-Chip ROM
	$\mu$ PD78P064BGC-7EA	100-pin plastic QFP (fine pitch) ( $14 \times 14$ mm)	One-time PROM
★	$\mu$ PD78P064BGC-8EU	100-pin plastic LQFP (fine pitch) ( $14 \times 14$ mm)	One-time PROM
	$\mu$ PD78P064BGF-3BA	100-pin plastic QFP ( $14 \times 20$ mm)	One-time PROM

**Caution** The  $\mu$ PD78P064BGC has two types of package. (Refer to 7. PACKAGE DRAWINGS). For the package suppliable to your device, consult NEC sales personnels.

The information in this document is subject to change without notice.

# ★ 78K/0 SERIES DEVELOPMENT

The following shows the products organized according to usage. The names in the parallelograms are subseries names.

**Note** Under planning

The following lists the main functional differences between subseries products.

Function Subseries Name		ROM Capacity	Timer				8-bit	10-bit	8-bit	Serial Interface	I/O	V <sub>DD</sub> MIN. Value	External Expansion
			8-bit	16-bit	Watch	WDT	A/D	A/D	D/A				
Control	μPD78075B	32K-40K	4ch	1ch	1ch	1ch	8ch	–	2ch	3ch (UART: 1ch)	88	1.8 V	○
	μPD78078	48K-60K									61	2.7 V

**Note** 10-bit timer: 1 channel

# FUNCTION DESCRIPTION

Item		Function
Internal memory		<ul style="list-style-type: none"><li>• PROM : 32 K bytes</li><li>• RAM<ul style="list-style-type: none"><li>High-speed RAM : 1024 bytes<sup>Note</sup></li><li>LCD display RAM : 40 × 4 bits</li></ul></li></ul>
General-purpose register		8 bits × 32 registers (8 bits × 8 registers × 4 banks)
Instruction cycles	When main system clock is selected	0.4 μs/0.8 μs/1.6 μs/3.2 μs/6.4 μs/12.8 μs (when operating at 5.0 MHz)
	When subsystem clock is selected	122 μs (when operating at 32.768 kHz)
Instruction set		<ul style="list-style-type: none"><li>• 16-bit operation</li><li>• Multiplication/division (8 bits × 8 bits, 16 bits ÷ 8 bits)</li><li>• Bit manipulation (set, reset, test, boolean operation)</li><li>• BCD correction, etc.</li></ul>
I/O ports [ Include segment signal output dual-function pin ]		<div>Total : 57<ul style="list-style-type: none"><li>• CMOS input : 2</li><li>• CMOS input/output : 55</li></ul></div>
A/D converter		<ul style="list-style-type: none"><li>• 8-bit resolution × 8 ch</li></ul>
LCD controller/driver		<ul style="list-style-type: none"><li>• Segment signal output : 40 max.</li><li>• Common signal output : 4 max.</li><li>• Bias : 1/2, 1/3, Bias switchable</li></ul>
Serial interface		<ul style="list-style-type: none"><li>• 3-wire serial I/O/SBI/2-wire serial I/O mode selectable : 1 ch</li><li>• 3-wire serial I/O/UART mode selectable : 1 ch</li></ul>
Timer		<ul style="list-style-type: none"><li>• 16-bit timer/event counter : 1 ch</li><li>• 8-bit timer/event counter : 2 ch</li><li>• Watch timer : 1 ch</li><li>• Watchdog timer : 1 ch</li></ul>
Timer output		3 pins (14-bit PWM output enable 1 pin)
Clock output		19.5 kHz, 39.1 kHz, 78.1 kHz, 156 kHz, 313 kHz, 625 kHz, 1.25 MHz, 2.5 MHz, 5.0 MHz (when operating at main system clock 5.0 MHz), 32.768 kHz (when operating at subsystem clock 32.768 kHz)
Buzzer output		1.2 kHz, 2.4 kHz, 4.9 kHz, 9.8 kHz (when operating at main system clock 5.0 MHz)
Vectored interrupt sources	Maskable	Internal : 12, External : 6
	Non-maskable	Internal : 1
	Software	1
Test input		Internal : 1, External : 1
Supply voltage		V <sub>DD</sub> = 2.0 to 6.0 V
Package		<ul style="list-style-type: none"><li>• 100-pin plastic (fine pitch) QFP (14 × 14 mm)</li><li>• 100-pin plastic LQFP (fine pitch) (14 × 14 mm)</li><li>• 100-pin plastic QFP (14 × 20 mm)</li></ul>

★

- 100-pin plastic QFP (14 × 20 mm)

$\mu$ PD78P068BGF-3BA

- Cautions**
1. Connect VPP pin directly to VSS.
  2. AVDD pin shares the port power supply with that of the A/D converter. When using in applications where noise from inside the microcomputer has to be reduced, connect the AVDD pin to a separate power supply, whose electrical potential is the same as that of VDD.
  3. AVSS pin shares the port GND with that of the A/D converter. When using in applications where noise from inside the microcomputer has to be reduced, connect the AVSS pin to a separate ground line.

## 1. DIFFERENCES BETWEEN $\mu$ PD78P064B AND MASK ROM PRODUCTS

The  $\mu$ PD78P064B is a single-chip microcontroller with an on-chip one-time writable PROM.

It is possible to make all the functions exception PROM specification, and mask option of LCD drive power supply dividing resistor, to the same as those of mask ROM products by setting the memory size switching register (IMS).

Difference between the PROM product ( $\mu$ PD78P064B) and mask ROM product ( $\mu$ PD78064B) are shown in Table 1-1.

**Table 1-1. Differences between  $\mu$ PD78P064B and Mask ROM Products**

Item	$\mu$ PD78P064B	Mask ROM Products
Internal ROM structure	One-time PROM	Mask ROM
IC pin	No	Yes
V <sub>PP</sub> pin	Yes	No
Mask option of LCD drive power supply dividing resistor	No	Yes
Electrical characteristics	Refer to Data Sheet for each product	

★ **Caution** Noise resistance and noise radiation are different in PROM version and mask ROM versions. If using a mask ROM version instead of the PROM version for processes between prototype development and full production, be sure to fully evaluate the CS of the mask ROM version (not ES).

**Remark** The internal PROM becomes to 32K bytes and the internal high-speed RAM becomes 1024 bytes by the  $\overline{\text{RESET}}$  input.

## 2. PIN FUNCTION TABLE

### 2.1 PINS IN NORMAL OPERATING MODE

#### (1) PORT PINS (1/2)

Pin Name	Input/Output	Function		After Reset	Dual-Function Pin
P00	Input	Port 0 7-bit input/output port	Input only	Input	INTP0/TI00
P01	Input/output		Input/output is specifiable bit-wise. When used as the input port, an on-chip pull-up resistor can be used by software.	Input	INTP1/TI01
P02					INTP2
P03					INTP3
P04					INTP4
P05					INTP5
P07 <sup>Note 1</sup>	Input		Input only	Input	XT1
P10 to P17	Input/output	Port 1 8-bit input/output port Input/output is specifiable bit-wise. When used as the input port, an on-chip pull-up resistor can be used by software. <sup>Note 2</sup>		Input	ANI0 to ANI7
P25	Input/output	Port 2 3-bit input/output port Input/output is specifiable bit-wise. When used as the input port, an on-chip pull-up resistor can be used by software.		Input	SI0/SB0
P26					SO0/SB1
P27					$\overline{\text{SCK0}}$
P30	Input/output	Port 3 8-bit input/output port Input/output is specifiable bit-wise. When used as the input port, an on-chip pull-up resistor can be used by software.		Input	TO0
P31					TO1
P32					TO2
P33					TI1
P34					TI2
P35					PCL
P36					BUZ
P37					—
P70	Input/output	Port 7 3-bit input/output port Input/output is specifiable bit-wise. When used as the input port, an on-chip pull-up resistor can be used by software.		Input	SI2/RxD
P71					SO2/TxD
P72					$\overline{\text{SCK2}}$ /ASCK

- Notes**
1. When P07/XT1 pins are used as the input ports, set processor clock control register (PCC) bit 6 (FRC) to 1. (Do not use the on-chip feedback resistor of the subsystem clock oscillation circuit.)
  2. When P10/ANI0 to P17/ANI7 pins are used as the analog inputs for A/D converter, set port 1 to input mode. The on-chip pull-up resistor is automatically disabled.

## (1) PORT PINS (2/2)

Pin Name	Input/Output	Function	After Reset	Dual-Function Pin
P80 to P87	Input/output	Port 8 8-bit input/output port Input/output is specifiable bit-wise. When used as the input port, an on-chip pull-up resistor can be used by software. Input/output port/segment signal output function specifiable in 2-bit units by LCD display control register (LCDC).	Input	S39 to S32
P90 to P97	Input/output	Port 9 8-bit input/output port. Input/output is specifiable bit-wise. When used as the input port, an on-chip pull-up resistor can be used by software. Input/output port/segment signal output function specifiable in 2-bit units by LCD display control register. (LCDC).	Input	S31 to S24
P100 to P103	Input/output	Port 10 4-bit input/output port Input/output is specifiable in bit-wise. When used as the input port, an on-chip pull-up resistor can be used by software. It is possible to directly drive LED.	Input	—
P110 to P117	Input/output	Port 11 8-bit input/output port Input/output is specifiable in bit-wise. When used as the input port, an on-chip pull-up resistor can be used by software. Falling edge detection possible.	Input	—

**Caution** Do not perform the following operation on the pins shared with port pins during A/D conversion operation; otherwise, the specifications of the total error during A/D conversion cannot be satisfied (except the pins shared with LCD segment output pins).

- (1) Rewriting the output latch of an output pin used as a port pin
- (2) Changing the output level of an output pin even when it is not used as a port pin

## (2) PINS OTHER THAN PORT PINS (1/2)

Pin Name	Input/Output	Function	After Reset	Dual-Function Pin
INTP0	Input	External interrupt request input with specifiable Valid edges (rising edge, falling edge, and both rising and falling edges).	Input	P00/TI00
INTP1				P01/TI01
INTP2				P02
INTP3				P03
INTP4				P04
INTP5				P05
SI0	Input	Serial data input of the serial interface	Input	P25/SB0
SI2				P70/RxD
SO0	Output	Serial data output of the serial interface	Input	P26/SB1
SO2				P71/TxD
SB0	Input/output	Serial data input/output of the serial interface	Input	P25/SI0
SB1				P26/SO0
$\overline{\text{SCK0}}$	Input/output	Serial clock input/output of the serial interface	Input	P27
$\overline{\text{SCK2}}$				P72/ASCK
RxD	Input	Serial data input for asynchronouse serial interface	Input	P70/SI2
TxD	Output	Serial data output for asynchronous serial interface	Input	P71/SO2
ASCK	Input	Serial clock input for asynchronous serial interface	Input	P72/ $\overline{\text{SCK2}}$
TI00	Input	External count clock input to the 16-bit timer (TM0).	Input	P00/INTP0
TI01		Capture trigger signal input to the capture register (CR00).		P01/INTP1
TI1		External count clock input to the 8-bit timer (TM1).		P33
TI2		External count clock input to the 8-bit timer (TM2).		P34
TO0	Output	16-bit timer (TM0) output (dual-function as 14-bit PWM output)	Input	P30
TO1		8-bit timer (TM1) output		P31
TO2		8-bit timer (TM2) output		P32
PCL	Output	Clock output (for trimming main system clock and subsystem clock)	Input	P35
BUZ	Output	Buzzer output	Input	P36
S0 to S23	Output	LCD controller/driver segment signal output	Output	—
S24 to S31			Input	P97-P90
S32 to S39				P87-P80
COM0 to COM3	Output	LCD controller/driver common signal output	Output	—
V <sub>LC0</sub> to V <sub>LC2</sub>	—	LCD drive voltage	—	—
BIAS	—	LCD drive power supply	—	—

**(2) PINS OTHER THAN PORT PINS (2/2)**

Pin Name	Input/Output	Function	After Reset	Dual-Function Pin
ANI0 to ANI7	Input	Analog input of A/D converter	Input	P10 to P17
AV <sub>REF</sub>	Input	Reference voltage input of A/D converter	—	—
AV <sub>DD</sub>	—	Analog power supply of A/D converter (shared by power supply of port)	—	—
AV <sub>SS</sub>	—	Ground potential of A/D converter (shared by ground potential of port)	—	—
$\overline{\text{RESET}}$	Input	System reset input	—	—
X1	Input	Main system clock oscillation crystal connection	—	—
X2	—		—	—
XT1	Input	Subsystem clock oscillation crystal connection	Input	P07
XT2	—		—	—
V <sub>DD</sub>	—	Positive power supply (except port)	—	—
V <sub>PP</sub>	—	High-voltage applied during program write/verification Connected directly to V <sub>SS</sub> in normal operating mode	—	—
V <sub>SS</sub>	—	Ground potential (except port)	—	—

- Cautions**
- 1. AV<sub>DD</sub> pin shares the port power supply with that of the A/D converter. When using in applications where noise from inside the microcomputer has to be reduced, connect the AV<sub>DD</sub> pin to a separate power supply, whose electrical potential is the same as that of V<sub>DD</sub>.**
  - 2. AV<sub>SS</sub> pin shares the port GND with that of the A/D converter. When using in applications where noise from inside the microcomputer has to be reduced, connect the AV<sub>SS</sub> pin to a separate ground line.**

**2.2 PINS IN PROM PROGRAMMING MODE**

Pin Name	Input/Output	Function
$\overline{\text{RESET}}$	Input	PROM programming mode setting When +5 V or +12.5 V is applied to the V <sub>PP</sub> pin and a low level signal is applied to the $\overline{\text{RESET}}$ pin, this chip is set in the PROM programming mode.
V <sub>PP</sub>	Input	PROM programming mode setting and high-voltage applied during program write/verification
A0 to A16	Input	Address bus
D0 to D7	Input/output	Data bus
$\overline{\text{CE}}$	Input	PROM enable input/program pulse input
$\overline{\text{OE}}$	Input	Read strobe input to PROM
$\overline{\text{PGM}}$	Input	Program/program inhibit input in PROM programing mode.
V <sub>DD</sub>	—	Positive power supply
V <sub>SS</sub>	—	Ground potential

### 2.3 PIN INPUT/OUTPUT CIRCUITS AND RECOMMENDED CONNECTION OF UNUSED PINS

Types of input/output circuits of the pins and recommended connection of unused pins are shown in Table 2-1.  
For the configuration of each type of input/output circuit, refer to Figure 2-1.

**Table 2-1. Type of Input/Output Circuit of Each Pin**

Pin Name	Input/Output Circuit Type	I/O	Recommended Connection When not Used
P00/INTP0/TI00	2	Input	Connect to V <sub>SS</sub> .
P01/INTP1/TI01	8-D	I/O	Individually connect to V <sub>SS</sub> via a resistor
P02/INTP2			
P03/INTP3			
P04/INTP4			
P05/INTP5			
P07/XT1	16	Input	Connect to V <sub>DD</sub> .
P10/ANI0 to P17/ANI7	11-C	I/O	Individually connect to V <sub>DD</sub> or V <sub>SS</sub> via a resistor
P25/SI0/SB0	10-C		
P26/SO0/SB1			
P27/SCK0			
P30/TO0	5-J		
P31/TO1			
P32/TO2			
P33/TI1	8-D		
P34/TI2			
P35/PCL	5-J		
P36/BUZ			
P37			
P70/SI2/RxD	8-D		
P71/SO2/TxD	5-J		
P72/SCK2/ASCK	8-D		
P80/S39 to P87/S32	17-E		
P90/S31 to P97/S24			
P100 to P103	5-J		
P110 to P117	8-D		Individually connect to V <sub>DD</sub> via resistor
S0 to S23	17-D	Output	Leave open
COM0 to COM3	18-B		
V <sub>LC0</sub> to V <sub>LC2</sub>	—		
BIAS	—		
RESET	2	Input	—
XT2	16	—	Leave open
AV <sub>REF</sub>	—		Connect to V <sub>SS</sub>
AV <sub>DD</sub>			Connect to separate power supply whose electrical potential is the same as that of V <sub>DD</sub> .
AV <sub>SS</sub>			Connect to separate ground line whose electrical potential is the same as that of V <sub>SS</sub> .
V <sub>PP</sub>			Connect directly to V <sub>SS</sub>

Figure 2-1. List of Pin Input/Output Circuits (1/2)

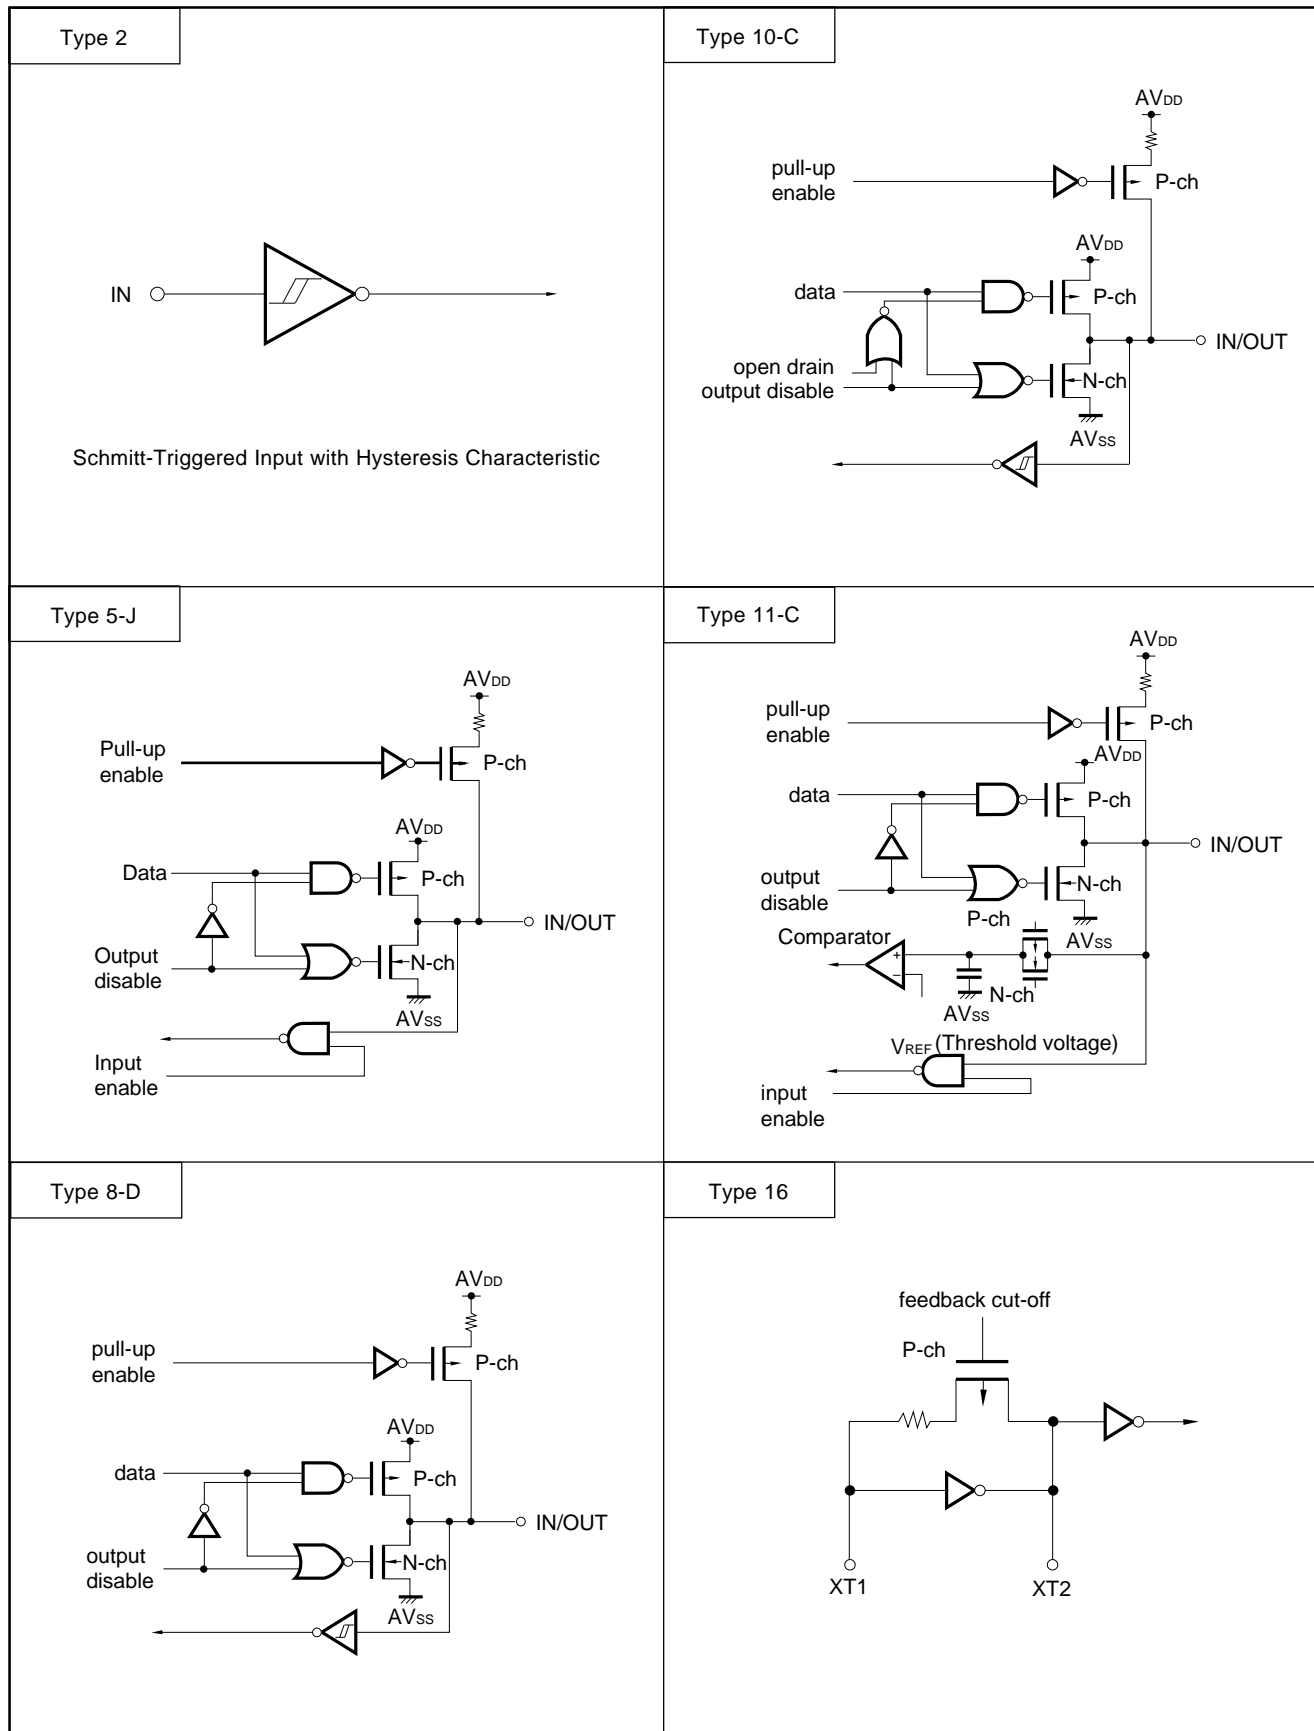

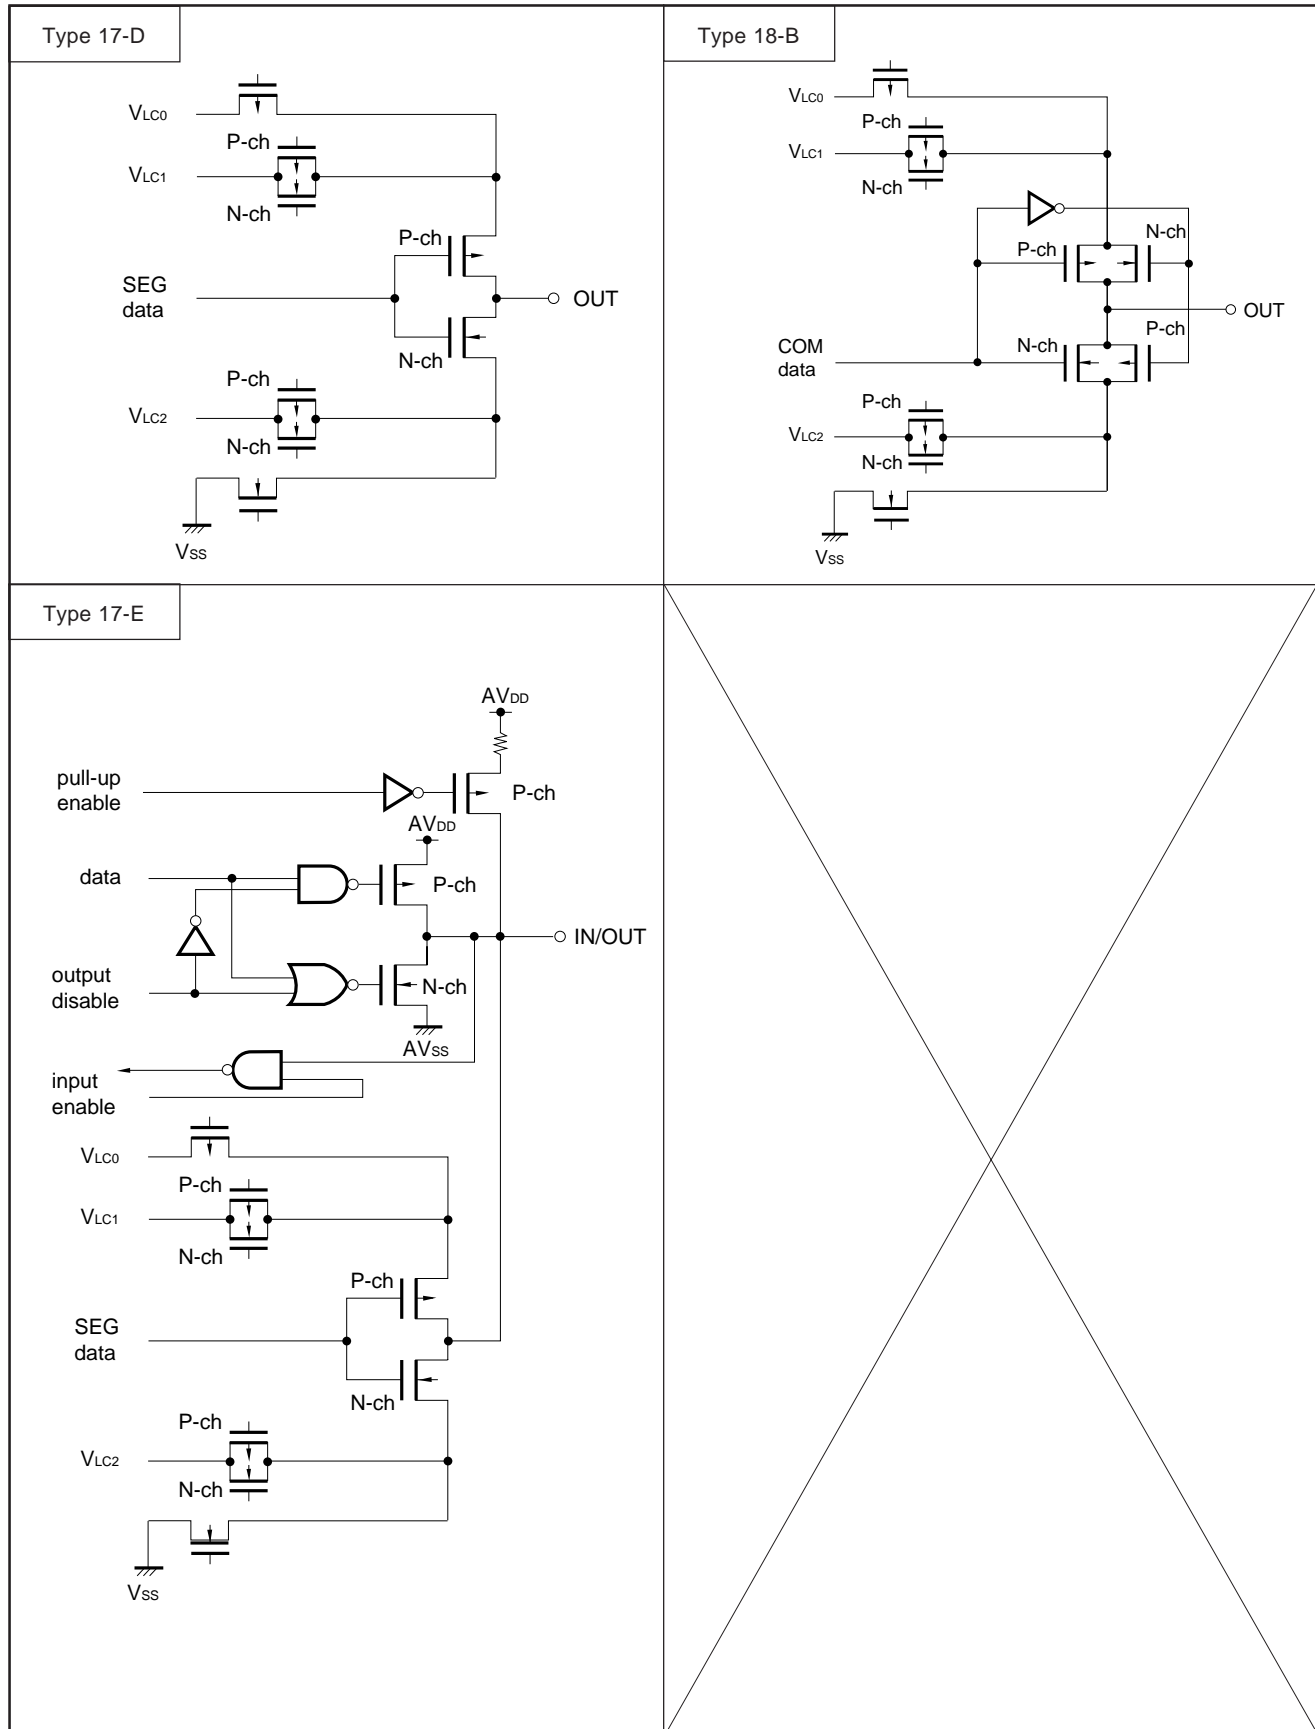

Figure 2-1. List of Pin Input/Output Circuits (2/2)

### 3. MEMORY SIZE SWITCHING REGISTER (IMS)

This is a register to disable use of part of internal memories by software. By setting this memory size switching register (IMS), it is possible to get the same memory mapping as that of mask ROM product having different internal memories (ROM, RAM).

The IMS is set up by the 8-bit memory manipulating instruction.

C8H will result by the  $\overline{\text{RESET}}$  input.

**Figure 3-1. Memory Size Switching Register Format**

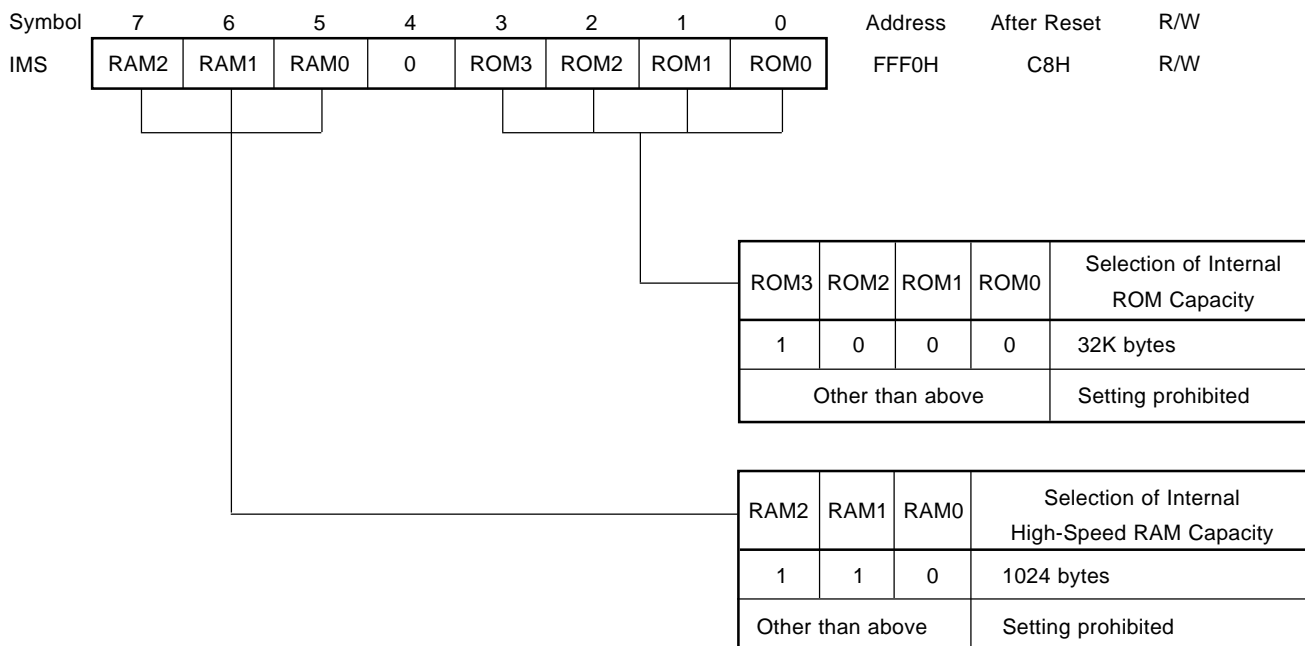

Table 3-1 shows the set values of IMS which makes the memory map the same as that of the various mask ROM products.

**Table 3-1. Memory Size Switching Register Setting Values**

Target Mask ROM Product	IMS Setting Value
μPD78064B	C8H

## 4. PROM PROGRAMMING

The  $\mu$ PD78P064B has an on-chip 32K-byte PROM as a program memory. For programming, set the PROM programming mode by the  $V_{PP}$  and  $\overline{\text{RESET}}$  pins. For processing unused pins, refer to **Pin Configuration (2) PROM programming mode**.

**Caution** When writing in a program, use locations 0000H-7FFFH. (Specify the last address as 7FFFH). You cannot write in using a PROM programmer that cannot specify the addresses to write.

### 4.1 OPERATING MODES

When +5 V or +12.5 V is applied to the  $V_{PP}$  pin and a low level signal is applied to the  $\overline{\text{RESET}}$  pin, the PROM programming mode is set. This mode will become the operating mode as shown in Table 4-1 when the  $\overline{\text{CE}}$ ,  $\overline{\text{OE}}$  and  $\overline{\text{PGM}}$  pins are set as shown.

Further, when the read mode is set, it is possible to read the contents of the PROM.

**Table 4-1. Operating Modes of PROM Programming**

<div>Pin</div> <div>Operating Mode</div>	$\overline{\text{RESET}}$	$V_{\text{PP}}$	$V_{\text{DD}}$	$\overline{\text{CE}}$	$\overline{\text{OE}}$	$\overline{\text{PGM}}$	D0 to D7
Page data latch	L	+12.5 V	+6.5 V	H	L	H	Data input
Page write				H	H	L	High-impedance
Byte write				L	H	L	Data input
Program verify				L	L	H	Data output
Program inhibit				×	H	H	High-impedance
				×	L	L	
Read	+5 V	+5 V	L	L	H	Data output	
Output disable			L	H	×	High-impedance	
Standby			H	×	×	High-impedance	

× : L or H

**(1) Read mode**

Read mode is set if  $\overline{CE} = L$ ,  $\overline{OE} = L$  is set.

**(2) Output disable mode**

Data output becomes high-impedance, and is in the output disable mode, of  $\overline{OE} = H$  is set.

Therefore, it allows data to be read from any device by controlling the  $\overline{OE}$  pin, if multiple  $\mu$ PD78P064Bs are connected to the data bus.

**(3) Standby mode**

Standby mode is set if  $\overline{CE} = H$  is set.

In this mode, data outputs become high-impedance irrespective of the  $\overline{OE}$  status.

**(4) Page data latch mode**

Page data latch mode is set if  $\overline{CE} = H$ ,  $\overline{PGM} = H$ ,  $\overline{OE} = L$  are set at the beginning of page write mode.

In this mode, 1 page 4-byte data is latched in an internal address/data latch circuit.

**(5) Page write mode**

After 1 page 4 bytes of addresses and data are latched in the page data latch mode, a page write is executed by applying a 0.1 ms program pulse (active low) to the  $\overline{PGM}$  pin with  $\overline{CE} = H$ ,  $\overline{OE} = H$ . Then, program verification can be performed, if  $\overline{CE} = L$ ,  $\overline{OE} = L$  are set.

If programming is not performed by a one-time program pulse, X ( $X \leq 10$ ) write and verification operations should be executed repeatedly.

**(6) Byte write mode**

Byte write is executed when a 0.1 ms program pulse (active low) is applied to the  $\overline{PGM}$  pin with  $\overline{CE} = L$ ,  $\overline{OE} = H$ . Then, program verification can be performed if  $\overline{OE} = L$  is set.

If programming is not performed by a one-time program pulse, X ( $X \leq 10$ ) write and verification operations should be executed repeatedly.

**(7) Program verify mode**

Program verify mode is set if  $\overline{CE} = L$ ,  $\overline{PGM} = H$ ,  $\overline{OE} = L$  are set. In this mode, check if a write operation is performed correctly, after the write.

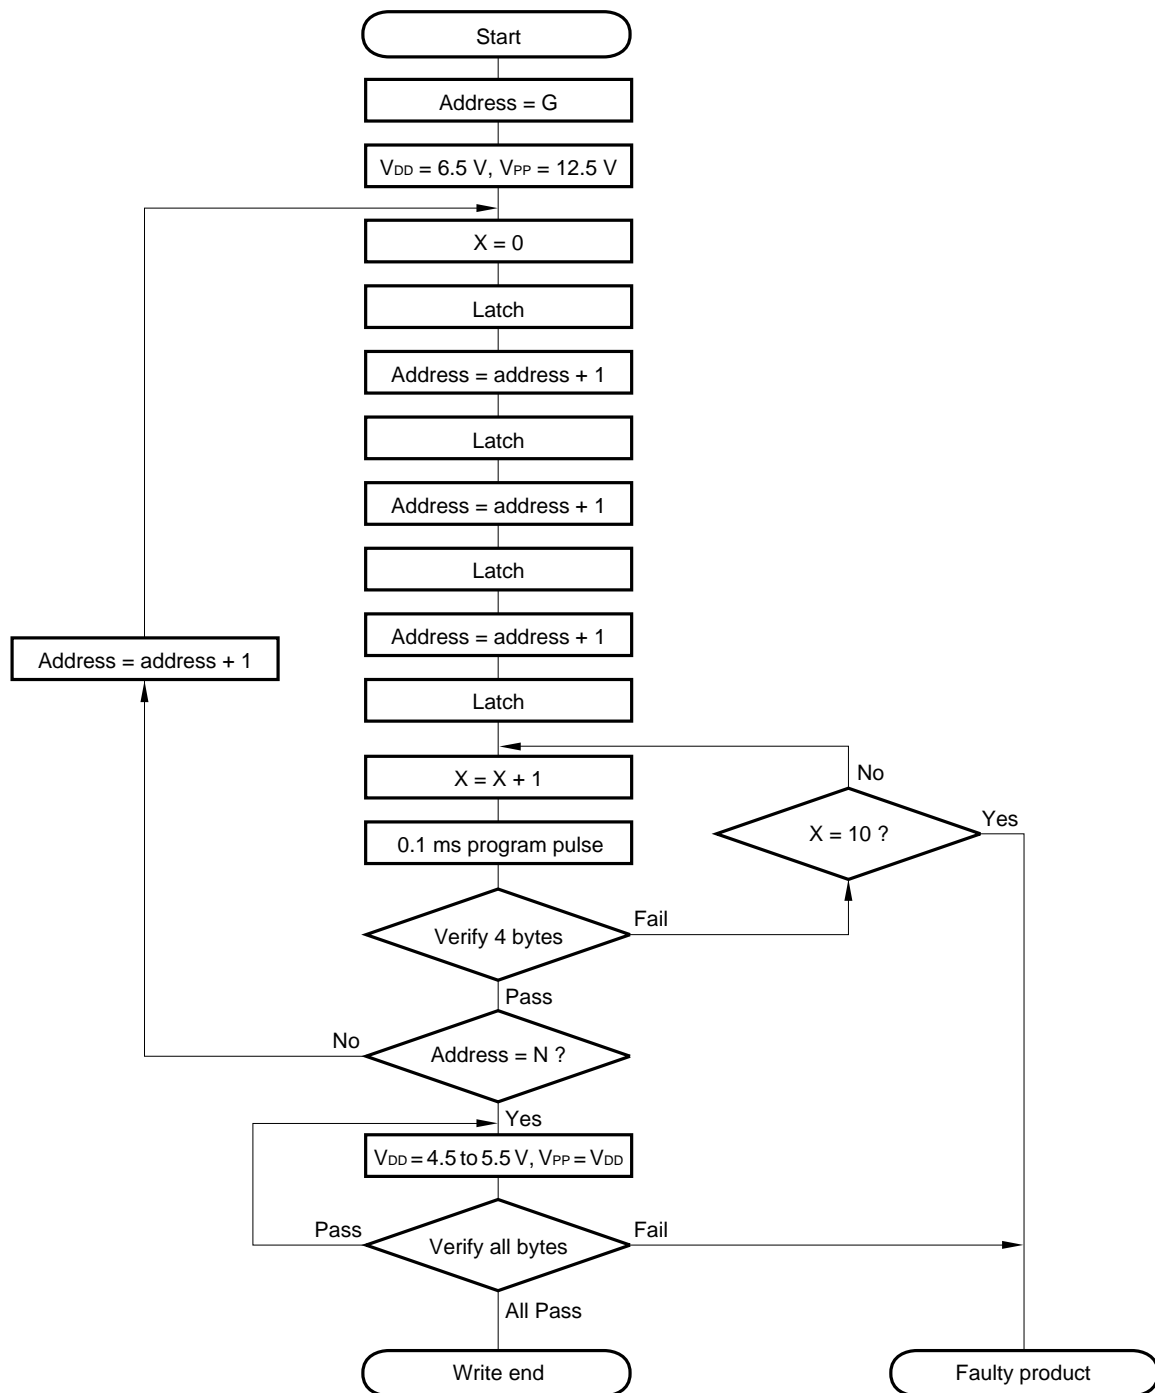

**(8) Program inhibit mode**

Program inhibit mode is used when the  $\overline{OE}$  pin,  $V_{PP}$  pin and D0 to D7 pins of multiple  $\mu$ PD78P064Bs are connected in parallel and a write is performed to one of those devices.

When a write operation is performed, the page write mode or byte write mode described above is used. At this time, a write is not performed to a device which has the  $\overline{PGM}$  pin driven high.

## 4.2 PROM WRITE PROCEDURE

Figure 4-1. Page Program Mode Flow Chart

G = Start address

N = Program last address

Figure 4-2. Page Program Mode Timing

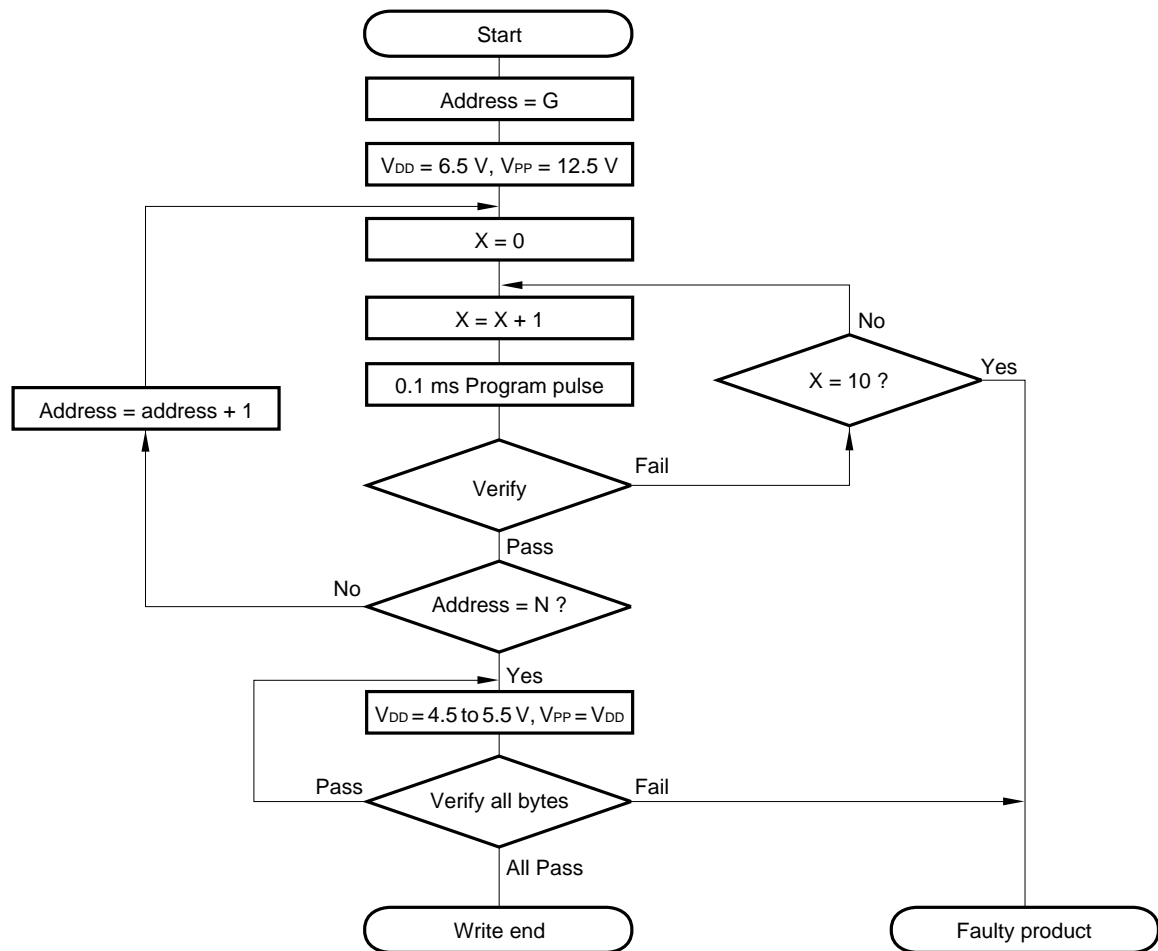

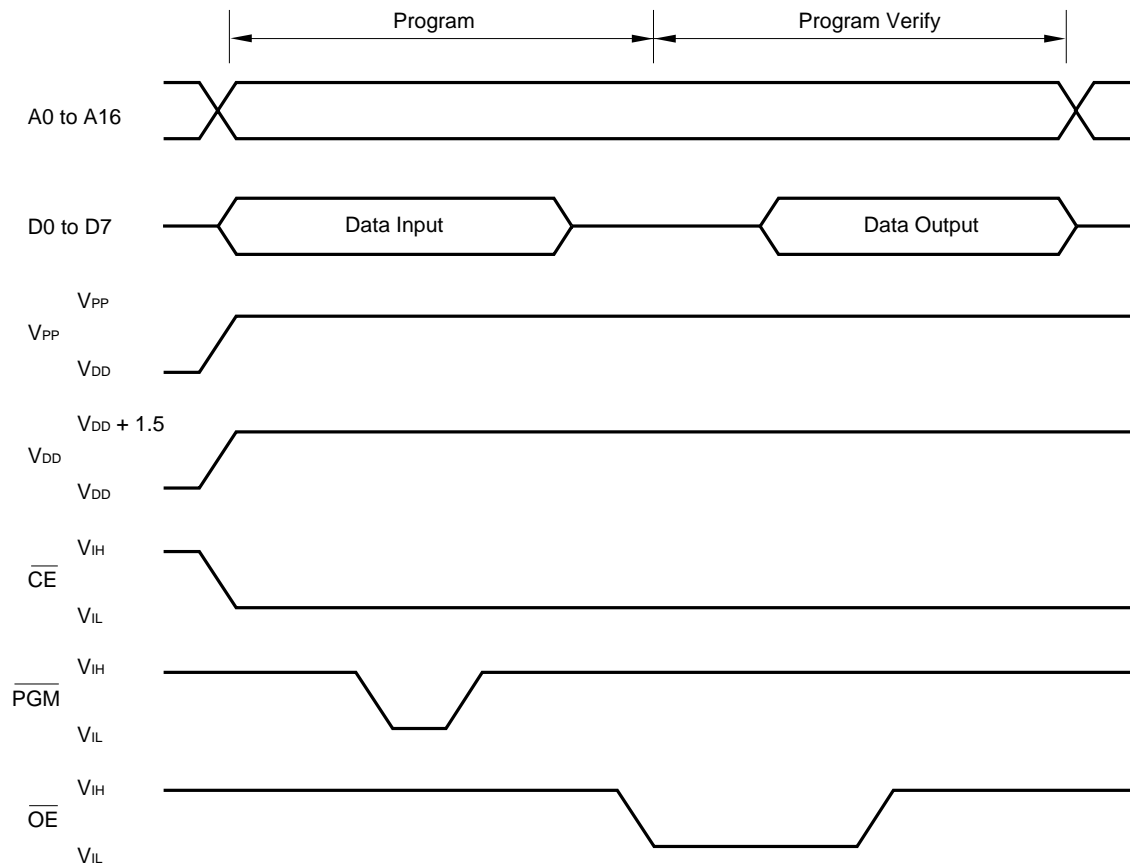

Figure 4-3. Byte Program Mode Flow Chart

G = Start address

N = Program last address

Figure 4-4. Byte Program Mode Timing

- Cautions**
1. **V<sub>DD</sub>** should be applied before **V<sub>PP</sub>** and cut after **V<sub>PP</sub>**.
  2. **V<sub>PP</sub>** must not exceed +13.5 V including overshoot.
  3. Reliability may be adversely affected of removal/reinsertion is performed while +12.5 V is being applied to **V<sub>PP</sub>**.

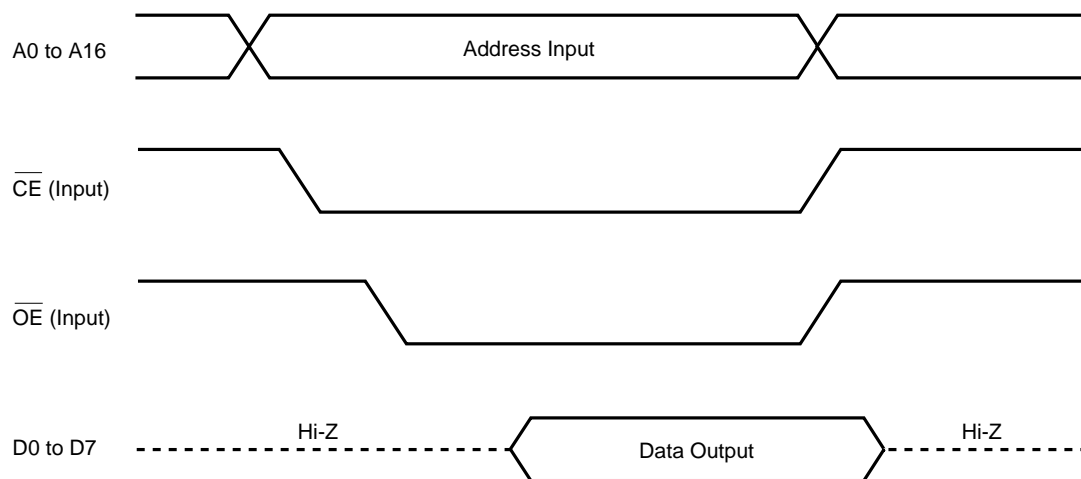

### 4.3 PROM READ PROCEDURE

The contents of PROM are readable to the external data bus (D0 to D7) according to the read procedure shown below.

- (1) Fix the  $\overline{\text{RESET}}$  pin at low level, supply +5 V to the  $V_{PP}$  pin, and process all other unused pins as shown in **Pin Configuration (2) PROM programming mode**.
- (2) Supply +5 V to the  $V_{DD}$  and  $V_{PP}$  pins.
- (3) Input address of read data into the A0 to A16 pins.
- (4) Read mode
- (5) Output data to D0 to D7 pins.

The timings of the above steps (2) to (5) are shown in Figure 4-5.

**Figure 4-5. PROM Read Timings**

## 5. ONE-TIME PROM PRODUCTS SCREENING

The one-time PROM product ( $\mu$ PD78P064BGC-7EA,  $\mu$ PD78P064BGC-8EU,  $\mu$ PD78P064BGF-3BA) can not be tested completely by NEC before it is shipped, because of its structure. It is recommended to perform screening to verify PROM after writing necessary data and performing high-temperature storage under the condition below.

Storage Temperature	Storage Time
125 °C	24 hours

At present, a fee is charged by NEC for one-time PROM after-programming writing, marking, screening, and verify service for the QTOP Microcomputer. For details, contact your sales representative.

## 6. ELECTRICAL SPECIFICATIONS

### ABSOLUTE MAXIMUM RATINGS (T<sub>A</sub> = 25°C)

Parameter	Symbol	Test Conditions		Rating	Unit
Supply voltage	V <sub>DD</sub>			−0.3 to +7.0	V
	V <sub>PP</sub>			−0.3 to +13.5	V
	AV <sub>DD</sub>			−0.3 to V <sub>DD</sub> +0.3	V
	AV <sub>REF</sub>			−0.3 to V <sub>DD</sub> +0.3	V
	AV <sub>SS</sub>			−0.3 to +0.3	V
Input voltage	V <sub>I</sub>	P00-P05, P07, P10-P17, P25-P27, P30-P37, P70-P72, P80-P87, P90-P97, P100-P103, P110-P117		−0.3 to V <sub>DD</sub> +0.3	V
	V <sub>I2</sub>	A9 (PROM programming mode)		−0.3 to +13.5	V
Output voltage	V <sub>O</sub>			−0.3 to V <sub>DD</sub> +0.3	V
Analog input voltage	V <sub>AN</sub>	P10-P17	Analog input pin	AV <sub>SS</sub> −0.3 to AV <sub>REF</sub> +0.3	V
Output current, high	I <sub>OH</sub>	1 pin		−10	mA
		Total for P01-P05, P10-P17, P25-P27, P30-P37, P70-P72, P80-P87, P90-P97, P100-P103, P110-P117		−15	mA
Output current, low	I <sub>OL</sub> Note	1 pin	Peak value	30	mA
			R.m.s. value	15	mA
		Total for P01-P05, P10-P17, P25-P27, P30-P37, P70-P72, P80-P87, P90-P97, P100-P103, P110-P117	Peak value	100	mA
			R.m.s. value	70	mA
Operating ambient temperature	T <sub>A</sub>			−40 to +85	°C
Storage temperature	T <sub>stg</sub>			−65 to +150	°C

**Note** The r.m.s. value should be calculated as follows: [R.m.s. value] = [Peak value] ×  $\sqrt{\text{Duty}}$

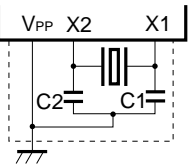

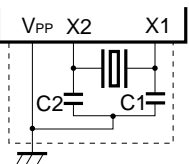

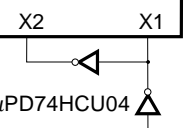

**Caution** The product quality may be damaged even if a value of only one of the above parameters exceeds the absolute maximum rating or any value exceeds the absolute maximum rating for an instant. That is, the absolute maximum rating is a rating value which may cause a product to be damaged physically. The absolute maximum rating values must therefore be observed in using the product.

**Remark** Unless specified otherwise, the characteristics of dual-function pins are the same as the those of port pins.

### CAPACITANCE (T<sub>A</sub> = 25 °C, V<sub>DD</sub> = V<sub>SS</sub> = 0 V)

Parameter	Symbol	Test Conditions	MIN.	TYP.	MAX.	Unit
Input capacitance	C <sub>IN</sub>	f = 1 MHz unmeasured pins returned to 0 V.			15	pF
Output capacitance	C <sub>OUT</sub>				15	pF
I/O capacitance	C <sub>IO</sub>				15	pF

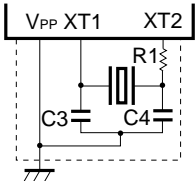

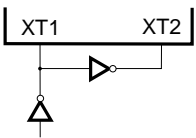

**MAIN SYSTEM CLOCK OSCILLATION CIRCUIT CHARACTERISTICS (T<sub>A</sub> = -40 to +85 °C, V<sub>DD</sub> = 2.0 to 6.0 V)**

Resonator	Recommended circuit	Parameter	Test conditions	MIN.	TYP.	MAX.	Unit
Ceramic resonator		Oscillator frequency (f <sub>x</sub> ) <sup>Note 1</sup>	V <sub>DD</sub> = Oscillator voltage range	1		5	MHz
		Oscillation stabilization time <sup>Note 2</sup>	After V <sub>DD</sub> reaches oscillator voltage range MIN.			4	ms
Crystal resonator		Oscillator frequency (f <sub>x</sub> ) <sup>Note 1</sup>		1		5	MHz
		Oscillation stabilization time <sup>Note 2</sup>	V <sub>DD</sub> = 4.5 to 6.0 V			10 30	ms
External clock		X1 input frequency (f <sub>x</sub> ) <sup>Note 1</sup>		1.0		5.0	MHz
		X1 input high/low level width (t <sub>xH</sub> , t <sub>xL</sub> )		85		500	ns

- Notes**
1. Indicates only oscillation circuit characteristics. Refer to “AC Characteristics” for instruction execution time.
  2. Time required to stabilize oscillation after reset or STOP mode release.

- Cautions**
1. When using the main system clock oscillator, wiring in the area enclosed with the broken line should be carried out as follows to avoid an adverse effect from wiring capacitance.
    - Wiring should be as short as possible.
    - Wiring should not cross other signal lines.
    - Wiring should not be placed close to a varying high current.
    - The potential of the oscillator capacitor ground should be the same as V<sub>SS</sub>.
    - Do not ground it to the ground pattern in which a high current flows.
    - Do not fetch a signal from the oscillator.
  2. If the main system clock oscillation circuit is operated by the subsystem clock when the main system clock is stopped, reswitching to the main system clock should be performed after the stable oscillation time has been obtained by the program.

SUBSYSTEM CLOCK OSCILLATOR CHARACTERISTICS ( $T_A = -40$  to  $+85^\circ\text{C}$ ,  $V_{DD} = 2.0$  to  $6.0$  V)

Resonator	Recommended Circuit	Parameter	Test Conditions	MIN.	TYP.	MAX.	Unit
Crystal resonator		Oscillator frequency ( $f_{XT}$ ) <sup>Note 1</sup>		32	32.768	35	kHz
		Oscillation stabilization time <sup>Note 2</sup>	$V_{DD} = 4.5$ to $6.0$ V		1.2	2	s
						10	
External clock		XT1 input frequency ( $f_{XT}$ ) <sup>Note 1</sup>		32		100	kHz
		XT1 input high-/low-level width ( $t_{XTH}/t_{XTL}$ )		5		15	μs

- Notes**
1. Indicates only oscillation circuit characteristics. Refer to “AC Characteristics” for instruction execution time.
  2. Time required to stabilize oscillation after  $V_{DD}$  has reached the minimum oscillation voltage range.

- Cautions**
1. When using the subsystem clock oscillator, wiring in the area enclosed with the broken line should be carried out as follows to avoid an adverse effect from wiring capacitance.
    - Wiring should be as short as possible.
    - Wiring should not cross other signal lines.
    - Wiring should not be placed close to a varying high current.
    - The potential of the oscillator capacitor ground should be the same as  $V_{SS}$ .
    - Do not ground it to the ground pattern in which a high current flows.
    - Do not fetch a signal from the oscillator.
  2. The subsystem clock oscillation circuit is designed as a low amplification circuit to provide low consumption current, causing misoperation to noise more frequently than the main system clock oscillation circuit. Special care should therefore be taken to wiring method when the subsystem clock is used.

## RECOMMENDED OSCILLATION CIRCUIT CONSTANT

MAIN SYSTEM CLOCK: CERAMIC RESONATOR ( $T_A = -40$  to  $+85$  °C)

Manufacturer	Product Name	Frequency (MHZ)	Recommended Circuit Constant		Oscillator Voltage Range		Remarks
			C1 (pF)	C2 (pF)	MIN. (V)	MAX. (V)	
Murata Mfg. Co., Ltd.	CSA5.00MG	5.00	30	30	2.7	6.0	
	CST5.00MGW	5.00	Built-in	Built-in	2.7	6.0	
Matsushita Electronics Components Co., Ltd.	EF0GC5004A4	5.00	Built-in	Built-in	2.7	6.0	Lead type
	EF0EC5004A4	5.00	Built-in	Built-in	2.7	6.0	Round lead type
	EF0EN5004A4	5.00	33	33	2.7	6.0	Lead type
	EF0S5004B4	5.00	Built-in	Built-in	2.7	6.0	Chip type
Kyocera Corporation	KBR-5.0MSA	5.00	33	33	2.7	6.0	Lead type
	PBRC5.00A	5.00	33	33	2.7	6.0	Chip type
	KBR-5.0MKS	5.00	Built-in	Built-in	2.7	6.0	Lead type
	KBR-5.0MWS	5.00	Built-in	Built-in	2.7	6.0	Chip type

**Caution** The oscillation circuit constants and oscillation voltage range indicate conditions for stable oscillation but do not guarantee accuracy of the oscillation frequency. If the application circuit requires accuracy of the oscillation frequency, it is necessary to set the oscillation frequency in the application circuit. For this, it is necessary to directly contact the manufacturer of the resonator being used.

DC CHARACTERISTICS ( $T_A = -40$  to  $+85^\circ\text{C}$ ,  $V_{DD} = 2.0$  to  $6.0$  V)

Parameter	Symbol	Test Conditions		MIN.	TYP.	MAX.	Unit
Input voltage, high	$V_{IH1}$	P10-P17, P30-P32, P35-P37, P80-P87, P90-P97, P100-P103	$V_{DD} = 2.7$ to $6.0$ V	$0.7 V_{DD}$		$V_{DD}$	V

$\overline{\text{CE}}$ setup time (to $\overline{\text{PGM}}\downarrow$ )	$t_{CES}$	$t_{CES}$		2			$\mu\text{s}$
Input data setup time (to $\overline{\text{PGM}}\downarrow$ )	$t_{DS}$	$t_{DS}$		2			$\mu\text{s}$
Address hold time (from $\overline{\text{OE}}\uparrow$ )	$t_{AH}$	$t_{AH}$		2			$\mu\text{s}$
Input data hold time (from $\overline{\text{PGM}}\uparrow$ )	$t_{DH}$	$t_{DH}$		2			$\mu\text{s}$
Data output float delay time from $\overline{\text{OE}}\uparrow$	$t_{DF}$	$t_{DF}$		0		250	ns
$V_{PP}$ setup time (to $\overline{\text{PGM}}\downarrow$ )	$t_{VPS}$	$t_{VPS}$		1.0			ms
$V_{DD}$ setup time (to $\overline{\text{PGM}}\downarrow$ )	$t_{VDS}$	$t_{VCS}$		1.0			ms
Program pulse width	$t_{PW}$	$t_{PW}$		0.095	0.1	0.105	ms
Valid data delay time from $\overline{\text{OE}}\downarrow$	$t_{OE}$	$t_{OE}$				1	$\mu\text{s}$
$\overline{\text{OE}}$ hold time	$t_{OEH}$	—		2			$\mu\text{s}$

**Note** Corresponding  $\mu$ PD27C1001A symbol

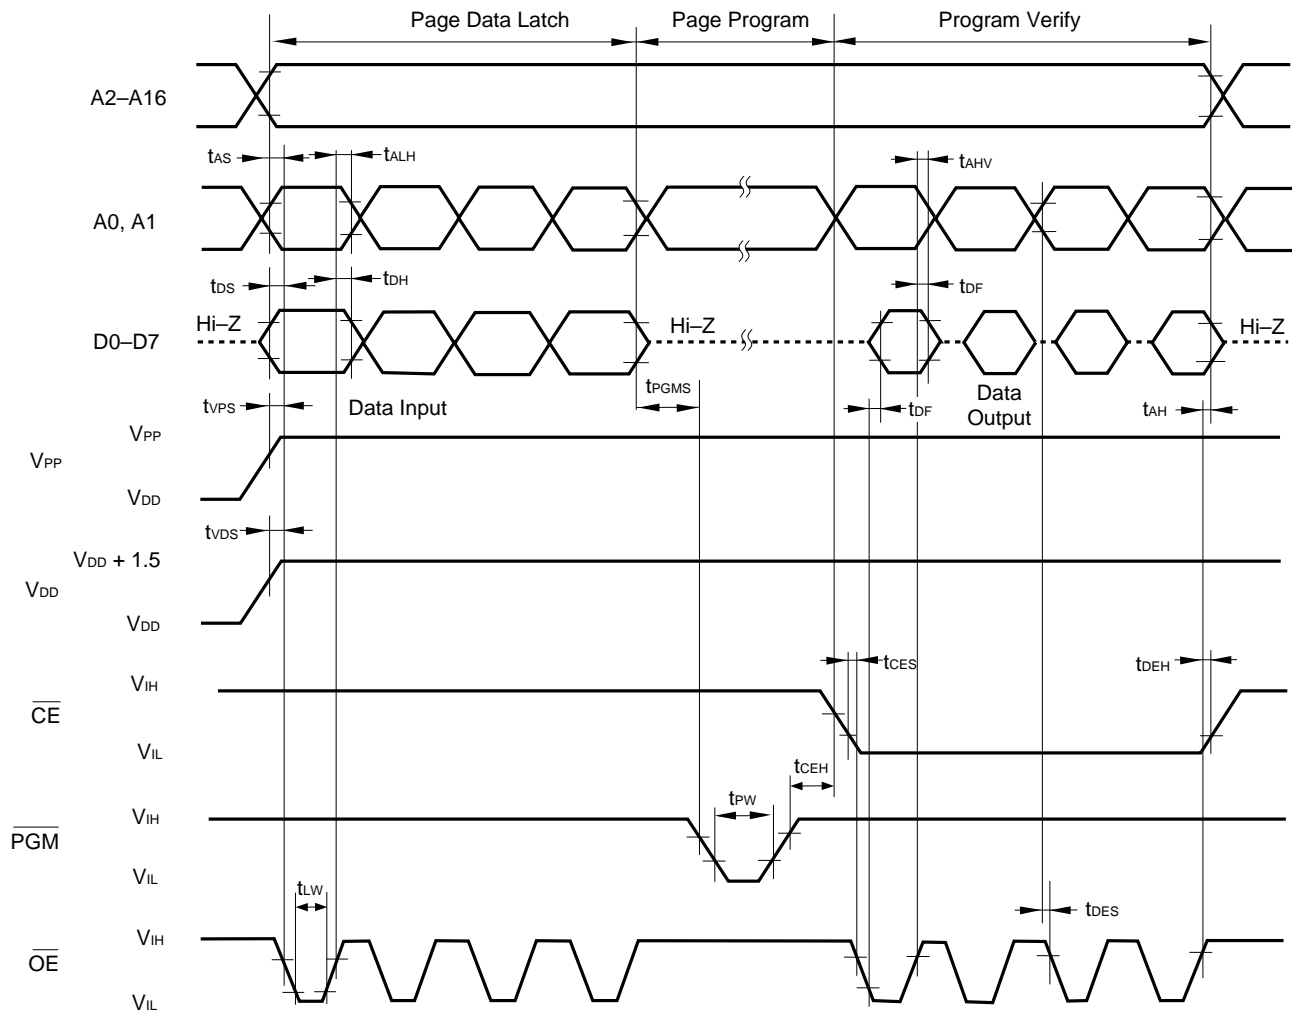

**(2) PROM Read Mode ( $T_A = 25 \pm 5^\circ\text{C}$ ,  $V_{DD} = 5.0 \pm 0.5\text{ V}$ ,  $V_{PP} = V_{DD} \pm 0.6\text{ V}$ )**

Parameter	Symbol	Symbol <sup>Note</sup>	Test Conditions	MIN.	TYP.	MAX.	Unit
Data output time from address	$t_{ACC}$	$t_{ACC}$	$\overline{CE} = \overline{OE} = V_{IL}$			800	ns
Data output delay time from $\overline{CE}\downarrow$	$t_{CE}$	$t_{CE}$	$\overline{OE} = V_{IL}$			800	ns
Data output delay time from $\overline{OE}\downarrow$	$t_{OE}$	$t_{OE}$	$\overline{CE} = V_{IL}$			200	ns
Data output float delay time from $\overline{OE}\uparrow$	$t_{DF}$	$t_{DF}$	$\overline{CE} = V_{IL}$	0		60	ns
Data hold time from address	$t_{DH}$	$t_{DH}$	$\overline{CE} = \overline{OE} = V_{IL}$	0			ns

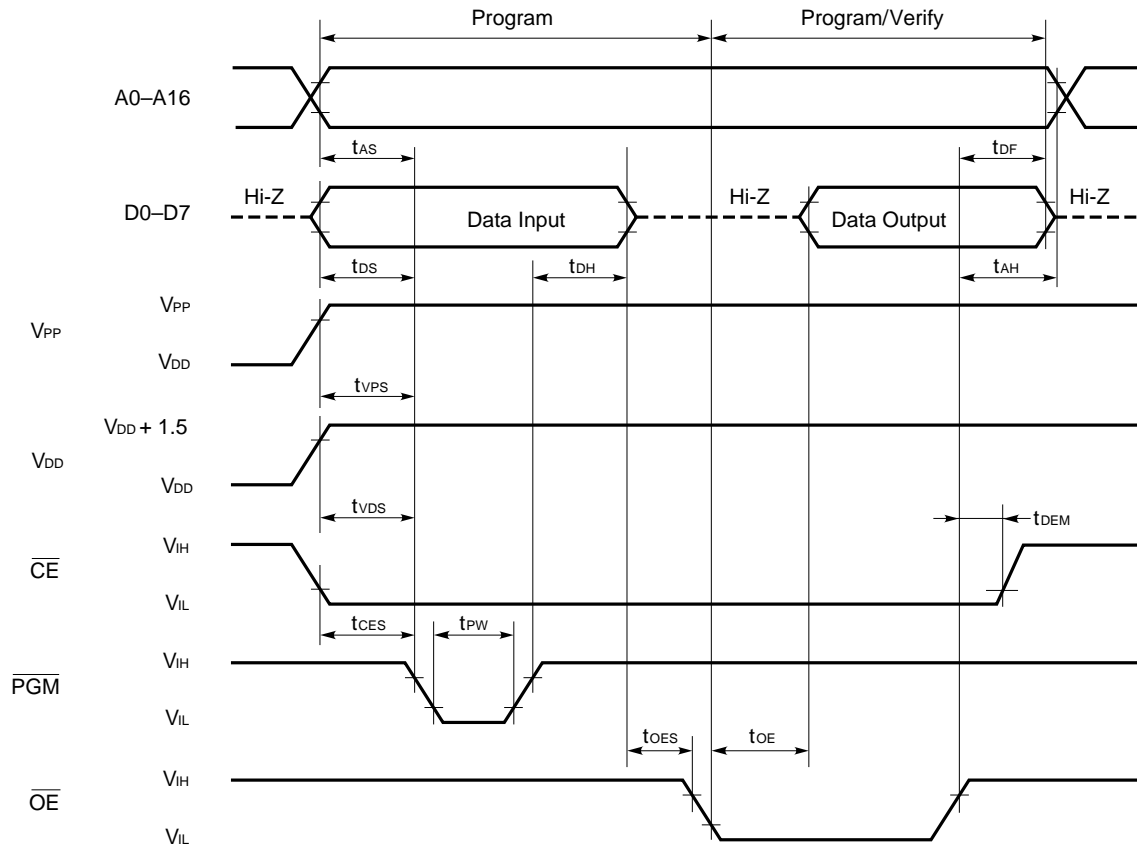

**Note** Corresponding  $\mu$ PD27C1001A symbol

**(3) PROM Programming Mode Setting ( $T_A = 25^\circ\text{C}$ ,  $V_{SS} = 0\text{ V}$ )**

Parameter	Symbol	Test Conditions	MIN.	TYP.	MAX.	Unit
PROM programming mode setup time	$t_{SMA}$		10			$\mu\text{s}$

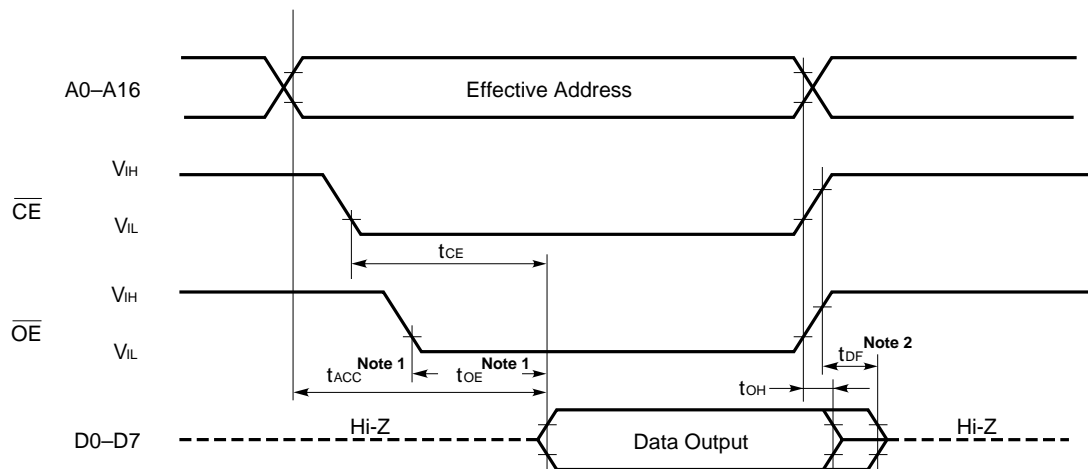

**PROM Write Mode Timing (Page program mode)**

### PROM Write Mode Timing (Byte program mode)

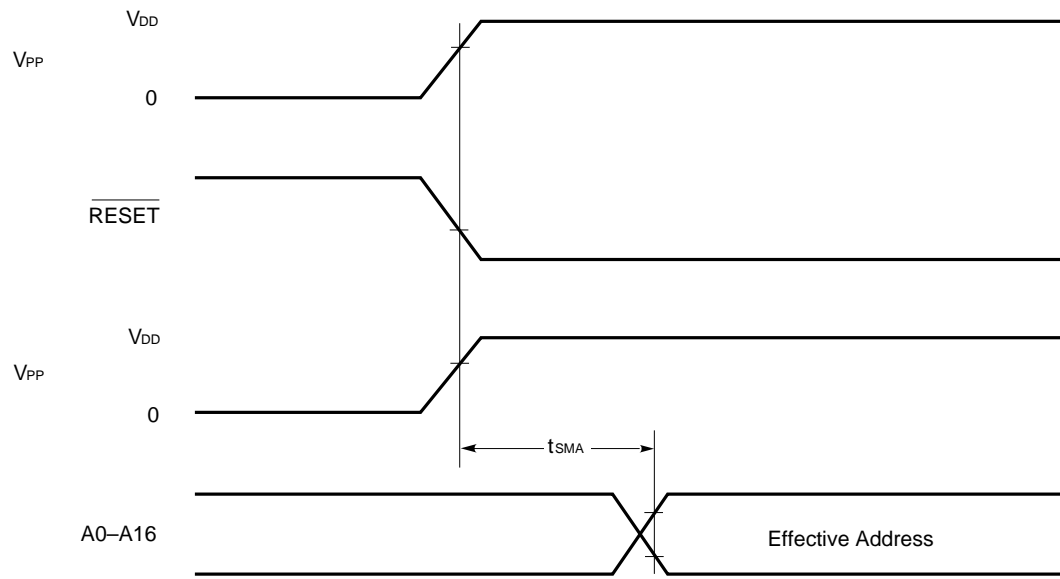

- Cautions**
1.  $V_{DD}$  must be applied before  $V_{PP}$  and cut off after  $V_{PP}$ .
  2.  $V_{PP}$  must not exceed +13.5 V including overshoot.
  3. Removing and reinserting may adversely affect in reliability while +12.5 V is applied to  $V_{PP}$ .

### PROM Read Mode Timing

- Notes**
1. When reading within the  $t_{ACC}$  range, the  $\overline{OE}$  input delay time from the  $\overline{CE}$  fall time must be maximum of  $t_{ACC} - t_{OE}$ .
  2.  $t_{DF}$  is the time from the point at which either  $\overline{OE}$  or  $\overline{CE}$  (whichever is first) reaches  $V_{IH}$ .

## 8. RECOMMENDED SOLDERING CONDITIONS

The μPD78P064B should be soldered and mounted under the conditions recommended in the table below.

For detail of recommended soldering conditions, refer to the information document **Semiconductor Device Mounting Technology Manual (C10535E)**.

For soldering methods and conditions other than those recommended below, contact our sales personnel.

**Table 8-1. Surface Mounting Type Soldering Conditions**

(1) μPD78P064BGC-7EA: 100-pin plastic QFP (fine pitch) (14 × 14 mm)

★ μPD78P064BGC-8EU: 100-pin plastic LQFP (fine pitch) (14 × 14 mm)

Soldering Method	Soldering Conditions	Recommended Soldering Symbols
Infrared reflow	Package peak temperature: 235 °C, Duration: 30 sec. max. (at 210 °C or above), Number of times: Twice max., Time limit: 7 days <sup>Note</sup> (thereafter 10 hours prebaking required at 125 °C) <Precaution> Products cannot be baked while packed in anything other than in a heat resistant tray (i.e. they cannot be baked in a magazine, taping, or heat-labile tray).	IR35-107-2
VPS	Package peak temperature: 235 °C, Duration: 30 sec. max. (at 210 °C or above), Number of times: Twice max., Time limit: 7 days <sup>Note</sup> (thereafter 10 hours prebaking required at 125 °C) <Precaution> Products cannot be baked while packed in anything other than in a heat resistant tray (i.e. they cannot be baked in a magazine, taping, or heat-labile tray).	VP15-107-2
Partial heating	Pin temperature: 300 °C max., Duration: 3 sec. max. (per device side)	—

**Note** For the storage period after dry-pack decapsulation, storage conditions are max. 25 °C, 65 % RH.

(2) μPD78P064BGF-3BA: 100-pin plastic QFP (14 × 20 mm)

Soldering Method	Soldering Conditions	Recommended Soldering Symbols
Infrared reflow	Package peak temperature: 235 °C, Duration: 30 sec. max. (at 210 °C or above), Number of times: Three times max.	IR35-00-3
VPS	Package peak temperature: 215 °C, Duration: 40 sec. (at 200 °C or above), Number of times: Three times max.	VP15-00-3
Wave soldering	Solder bath temperature: 260 °C max., Duration: 10 sec. max., Number of times: Once, Preheating temperature: 120 °C max. (Package surface temperature)	WS60-00-1
Partial heating	Pin temperature: 300 °C max., Duration: 3 sec. max. (per device side)	—

**Caution** Use of more than one soldering method should be avoided (except in the case of partial heating).

## APPENDIX A. DEVELOPMENT TOOLS

The following development tools are available for system development using μPD78P064B.

### Language Processing Software

RA78K/0 <sup>Note 1, 2, 3, 4</sup>	78K/0 series common assembler package
CC78K/0 <sup>Note 1, 2, 3, 4</sup>	78K/0 series common C compiler package
DF78064 <sup>Note 1, 2, 3, 4</sup>	μPD78064 subseries common device file
CC78K/0-L <sup>Note 1, 2, 3, 4</sup>	78K/0 series common C compiler library source file

### PROM Writing Tools

PG-1500	PROM programmer
PA-78P064GC	Programmer adapters connected to PG-1500
PA-78P064GF	
PA-PG-1500 controller <sup>Note 1, 2</sup>	PG-1500 control program

### Debugging Tools

IE-78000-R	78K/0 series common in-circuit emulators
IE-78000-R-A	78K/0 series common in-circuit emulators (for integrated debugger)
IE-78000-R-BK	78K/0 series common break board
★ IE-780308-R-EM	μPD780308 subseries common evaluation emulation boards
EP-78064GC-R	μPD78064 subseries common emulation probes
EP-78064GF-R	
★ TGC-100SDW	Adapter to be mounted on a target system board made for 100-pin plastic QFP (GC-7EA, GC-8EU type) A product of Tokyo Eletech Corp. (Tokyo 03-5295-1661). When purchasing this product, consult your NEC distributor.
EV-9200GF-100	Socket to be mounted on a target system board made for 100-pin plastic QFP (GF-3BA type)
SM78K0 <sup>Note 5, 6, 7</sup>	78K/0 series common system simulators
ID78K0 <sup>Note 4, 5, 6, 7</sup>	IE-78000-R-A integrated debuggers
SD78K/0 <sup>Note 1, 2</sup>	IE-78000-R screen debuggers
DF78064 <sup>Note 1, 2, 4, 5, 6, 7</sup>	μPD78064 subseries common device file

### Real-Time OS

RX78K/0 <sup>Note 1, 2, 3, 4</sup>	78K/0 series real-time OS
MX78K/0 <sup>Note 1, 2, 3, 4</sup>	78K/0 series OS

**Fuzzy Inference Development Support System**

FE9000 <sup>Note 1</sup> , FE9200 <sup>Note 6</sup>	Fuzzy knowledge data creation tool
FT9080 <sup>Note 1</sup> , FT9085 <sup>Note 2</sup>	Translator
FI78K/II <sup>Note 1, 2</sup>	Fuzzy inference module
FD78K/II <sup>Note 1, 2</sup>	Fussy inference debugger

- Notes**
1. PC-9800 series (MS-DOS™) based
  2. IBM PC/AT™ and compatible machines (PC DOS™/IBM DOS™/MS-DOS) based
  3. HP9000 series 300™ (HP-UX™) based
  4. HP9000 series 700™ (HP-UX) based, SPARCstation™ (SunOS™) based, EWS4800 series (EWS-UX/V) based
  5. PC-9800 series (MS-DOS + Windows™) based
  6. IBM PC/AT and compatible machines (PC DOS/IBM DOS/MS-DOS + Windows) based
  7. NEWS™ (NEWS-OS™) based

- Remarks**
1. For third party development tools, refer to **78K/0 Series Selection Guide (U11126E)**.
  2. RA78K/0, CC78K/0, SM78K/0, ID78K/0, SD78K/0, and RX78K/0 are used in combination with DF78064.

## NOTES FOR CMOS DEVICES

### ① PRECAUTION AGAINST ESD FOR SEMICONDUCTORS

**Note:** Strong electric field, when exposed to a MOS device, can cause destruction of the gate oxide and ultimately degrade the device operation. Steps must be taken to stop generation of static electricity as much as possible, and quickly dissipate it once, when it has occurred. Environmental control must be adequate. When it is dry, humidifier should be used. It is recommended to avoid using insulators that easily build static electricity. Semiconductor devices must be stored and transported in an anti-static container, static shielding bag or conductive material. All test and measurement tools including work bench and floor should be grounded. The operator should be grounded using wrist strap. Semiconductor devices must not be touched with bare hands. Similar precautions need to be taken for PW boards with semiconductor devices on it.

### ② HANDLING OF UNUSED INPUT PINS FOR CMOS

**Note:** No connection for CMOS device inputs can be cause of malfunction. If no connection is provided to the input pins, it is possible that an internal input level may be generated due to noise, etc., hence causing malfunction. CMOS device behave differently than Bipolar or NMOS devices. Input levels of CMOS devices must be fixed high or low by using a pull-up or pull-down circuitry. Each unused pin should be connected to  $V_{DD}$  or GND with a resistor, if it is considered to have a possibility of being an output pin. All handling related to the unused pins must be judged device by device and related specifications governing the devices.

### ③ STATUS BEFORE INITIALIZATION OF MOS DEVICES

**Note:** Power-on does not necessarily define initial status of MOS device. Production process of MOS does not define the initial operation status of the device. Immediately after the power source is turned ON, the devices with reset function have not yet been initialized. Hence, power-on does not guarantee out-pin levels, I/O settings or contents of registers. Device is not initialized until the reset signal is received. Reset operation must be executed immediately after power-on for devices having reset function.

## Regional Information

Some information contained in this document may vary from country to country. Before using any NEC product in your application, please contact the NEC office in your country to obtain a list of authorized representatives and distributors. They will verify:

- Device availability
- Ordering information
- Product release schedule
- Availability of related technical literature
- Development environment specifications (for example, specifications for third-party tools and components, host computers, power plugs, AC supply voltages, and so forth)
- Network requirements

In addition, trademarks, registered trademarks, export restrictions, and other legal issues may also vary from country to country.

The documents referred to in this publication may include preliminary versions. However preliminary versions are not marked as such.

The export of this product from Japan is regulated by the Japanese government. To export this product may be prohibited without governmental license, the need for which must be judged by the customer. The export or re-export of this product from a country other than Japan may also be prohibited without a license from that country. Please call an NEC sales representative.

No part of this document may be copied or reproduced in any form or by any means without the prior written consent of NEC Corporation. NEC Corporation assumes no responsibility for any errors which may appear in this document.

NEC Corporation does not assume any liability for infringement of patents, copyrights or other intellectual property rights of third parties by or arising from use of a device described herein or any other liability arising from use of such device. No license, either express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of NEC Corporation or others.

While NEC Corporation has been making continuous effort to enhance the reliability of its semiconductor devices, the possibility of defects cannot be eliminated entirely. To minimize risks of damage or injury to persons or property arising from a defect in an NEC semiconductor device, customers must incorporate sufficient safety measures in its design, such as redundancy, fire-containment, and anti-failure features.

NEC devices are classified into the following three quality grades:

"Standard", "Special", and "Specific". The Specific quality grade applies only to devices developed based on a customer designated "quality assurance program" for a specific application. The recommended applications of a device depend on its quality grade, as indicated below. Customers must check the quality grade of each device before using it in a particular application.

Standard: Computers, office equipment, communications equipment, test and measurement equipment, audio and visual equipment, home electronic appliances, machine tools, personal electronic equipment and industrial robots

Special: Transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster systems, anti-crime systems, safety equipment and medical equipment (not specifically designed for life support)

Specific: Aircrafts, aerospace equipment, submersible repeaters, nuclear reactor control systems, life support systems or medical equipment for life support, etc.

The quality grade of NEC devices is "Standard" unless otherwise specified in NEC's Data Sheets or Data Books. If customers intend to use NEC devices for applications other than those specified for Standard quality grade, they should contact an NEC sales representative in advance.

Anti-radioactive design is not implemented in this product.
