## Description

The MAMF-010614 is a multi-function MMIC which includes a SPDT switch and LNA with bypass mode for the  $R_X$  path. This part would typically be used on the front end of WLAN 802.11a,n,ac modules where small size is critical.

The MAMF-010614 delivers high isolation between  $T_X$  and  $R_X$  paths, low  $T_X$  insertion loss and a high gain, low noise  $R_X$  path.
