Note:

- Output filtering capacitors C1, C3 is electrolytic capacitors, It is recommended to use high frequency and low impedance electrolytic capacitors. For capacitance and current of capacitor please refer to manufacture's datasheet. Voltage derating of capacitor should be 80% or above. C2 is ceramic capacitor, it is used to filter high frequency noise. TVS is a recommended component to protect post-circuits (if converter fails).
- MOV is required to PPM03 models to protect the device under surge.
- It is recommended to connect FUSE
- If EMC performance is required, recommended to add "EMC filter" at the input end (see figures)
C6: X capacitor, recommended parameter 0.1 μF /275V;
C7,C8: Y capacitor, recommended parameter 2200pF/400V;
NF: common model choke, recommended inductance is about 10mH-30mH.
- PPM03 models: Terminals 22 and 26 are internal rectification and filtering terminals. To protect the models further, it is recommended to connect an electrolytic capacitor C3 (it is recommended to be 4.7 μF /400V). If operation voltage of the module is between 160~264VAC, C3 can be removed.
