Features

- Silicon Planar Stabilizer Diodes
- Monolithic integrated analog circuits in MiniMELF case, designed for small power stabilizer and limitation circuits, providing low dynamic resistance and high-quality stabilization performance as well as low noise. In the reverse direction, these devices show the behavior of forward-biased silicon diodes.
- The end of the device marked with the cathode ring is to be connected: LL1.5 and LL2 to the negative pole of the supply voltage; LL2.4 thru LL5.1 to the positive pole of the supply voltage
- These diodes are also available in DO-35 case with the type designation ZTE1.5 ... ZTE 5.1.
