ZTB_H (KHz) Series is designed to provide the design engineer with a rugged, relatively low frequency device in the frequency range of 190 KHz to 1,250 KHz. Initial frequency tolerance is $\pm 0.5\%$ which compares very favorably to the nominal $\pm 2\% \sim \pm 3\%$ requirements of one chip microprocessors. ZTB_H series utilizes the area vibration mode of the piezoelectric ceramic element.

ZTA_H Series (-40°C ~ 125°C)

Ph:(314) 423 7550

Compatible to Murata CSA : 1.80-50.00MHz

Fax: (314) 423 0585

ZTA_H (MHz) Series cover the frequency range of 1.80 MHz to 50.00 MHz with an initial frequency tolerance of $\pm 0.5\%$. Since the ZTA_H Series utilizes the thickness mode of vibration of the piezoelectric element, there is little dimensional change with frequency. All ZTA_H resonators are epoxy coated and completely washable.

[Tape and Ammo](#) packaging is available.

ZTT_H (MHz) Series of ceramic resonators features a built-in load capacitance. This feature eliminates any need for external loading capacitors and reduces component count, increases reliability and reduces size. These unit are offered in the frequency range from 1.80 MHz to 50.00 MHz with an initial frequency tolerance of $\pm 0.5\%$. [Tape](#) and [Ammo](#) packaging is available.
