

DESCRIPTION

A1118 is a dual channel low-dropout regulator that delivers a maximum current of 1A for each individual output. Typical dropout voltage at 1A load current is 1.3V. Each individual output voltage can be set independently as fixed voltage (e.g 1.2V, 1.8V, 2.5V, 3.3V, 5V) or adjustable output which can provide an output voltage from 1.25 to 12V with two external resistors. The output accuracy of each channel is set within 2% by trimming.

A1118 offers thermal shut down and current limit functions to ensure reliability of device and power system.

Package input/output pin configuration can be customized on demand (i.e both output can share one input to save one input capacitor and corresponding PCB real estate).

The A1118 is available in PSOP8 Package.

ORDERING INFORMATION

Package Type	Part Number	
PSOP8 SPQ: 2,500pcs/Reel	MP8	A1118MP8R-XXYY
		A1118MP8VR-XXYY
Note	XX: Output voltage Vout1 18=1.8V, AD=Adj	
	YY: Output voltage Vout2 33=3.3V	
	V: Halogen free Package	
	R: Tape & Reel	
AiT provides all RoHS products		

FEATURES

- Dual channel output with each individual output can be either fixed output version or adjustable version.
- Maximum output current for each channel is 1A
- Range of operation input voltage: Max. 12V
- Standby current of each output: 2mA (typ.)
- Line regulation: 0.1%/V (typ.)
- Load regulation: 10mV (typ.)
- Environment Temperature: -20°C ~85°C
- Compatible with tantalum capacitor, electrolytic capacitor and MLCC.
- Available in PSOP8 Package

APPLICATION

- Power Management for Computer Mother Board, Graphic Card
- LCD Monitor and LCD TV
- DVD Decode Board
- ADSL Modem
- Post Regulators for Switching Supplies

TYPICAL APPLICATION

PIN DESCRIPTION

Pin #	Symbol	Function
1	GND	Ground
2	V _{IN1}	Channel 1 Input
3	GND	Ground
4	V _{IN2}	Channel 2 Input
5	V _{OUT2}	Channel 2 Output
6	V _{OUT2}	Channel 2 Output
7	V _{OUT1}	Channel 1 Output
8	V _{OUT1}	Channel 1 Output

ABSOLUTE MAXIMUM RATINGS

Max Input Voltage	12V
T _J , Operating Junction Temperature	125°C
T _A , Ambient Temperature	-20°C ~ 85°C
θ _{JC} , Package Thermal Resistance	PSOP8 10°C/W
T _S , Storage Temperature	-40°C ~ 150°C
Lead Temperature & Time	260°C, 10s

Stress beyond above listed "Absolute Maximum Ratings" may lead permanent damage to the device. These are stress ratings only and operations of the device at these or any other conditions beyond those indicated in the operational sections of the specifications are not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

RECOMMENDED WORKING CONDITIONS

Input Voltage Range	Max. 12V
Ambient Temperature	-20°C ~ 85°C

ELECTRICAL CHARACTERISTICS

*For each individual channel output

Test Conditions: $C_{IN}=0.1\mu F$, $C_{OUT}=10\mu F$, $T_A=25^\circ C$, unless otherwise specified.

BLOCK DIAGRAM

DETAILED DESCRIPTION

A1118 is a series of dual channel low-dropout regulator that delivers a maximum current of 1A for each individual output. Typical dropout voltage at 1A load current is 1.3V. Each individual output voltage can be set independently as fixed voltage (i.e. 1.2V, 1.8V, 2.5V, 3.3V, 5V) or adjustable output which can provide an output voltage ranges from 1.25 to 12V with two external resistors. The output accuracy of each channel is set within 2% by trimming.

The device has build-in modules including start-up circuit, bias circuit, bandgap, thermal shutdown, current limit, power transistors and driver circuit. Thermal shut down and current limit functions ensure reliability of device and power system.

The bandgap module provides stable reference voltage whose temperature coefficient is compensated by careful design considerations. The temperature coefficient is under 100ppm/°C. The accuracy of output voltage is guaranteed by trimming technique.

Package input/output pin configuration can be customized on demand (i.e both output can share one input to save one input capacitor and corresponding PCB real estate).

TYPICAL APPLICATION

Figure 1 Typical Application Schematic of A1118

A1118 has both fixed voltage version (1.2V, 1.8V, 2.5V, 3.3V, 5V) and adjustable voltage version. The input and output capacitors of each channel can be either tantalum, electrolytic or ceramic capacitor.

Figure 1 shows both fixed voltage and adjustable voltage application schematic. Channel 1 (designated as pin 1\2\7\8) is the schematic of adjustable version application. Channel 2 (designated as pin 3\4\5\6) is a typical application of fixed voltage. The adjustable version provides a 1.25V reference voltage with regard to its ADJ pin (shown as PIN 7\8 as its output and PIN 1 as its adjustable pin in Fig.1). The output voltage of adjustable version follows the equation:

$$V_{OUT}=1.25(1+R_2/R_1)+I_{ADJ} \times R_2.$$

We can ignore I_{ADJ} because I_{ADJ} (about 50uA) is much less than the current of R_1 (in the order of several milliamps).

1. To meet the minimum load current (>10mA) requirement, R_1 is recommended to be 125ohm or lower.
2. Using a bypass capacitor (C_{ADJ}) between the ADJ pin and ground can improve ripple rejection. This bypass capacitor prevents ripple from being amplified as the output voltage is increased. The impedance of C_{ADJ} should be less than R_1 to prevent ripple from being amplified. As R_1 is normally in the range of 100Ω~500Ω, the value of C_{ADJ} should satisfy this equation: $1/(2\pi \times f_{ripple} \times C_{ADJ}) < R_1$.

THERMAL CONSIDERATIONS

Thermal consideration has to be taken account into to ensure proper function of the device. Power dissipation of A1118 can be calculated as

$$\text{Power Dissipation} = (V_{IN1}-V_{OUT1}) \times I_{OUT1} + (V_{IN2}-V_{OUT2}) \times I_{OUT2}$$

For proper function and safe operation of the device, power dissipation is recommended to be limited within 2W.
