### Description

PolySwitch® low resistivity SMD (surface-mount device) is a versatile device well suited for general applications which have space-constrained, low power dissipation and high environmental reliability requirements.

The devices can help provide both overcurrent and overtemperature protection for battery pack PCMs (protection circuit modules), circuit PCBA and signal/power I/O interface. The resettable feature ensures the device will “Trip” and protect the application during the faults and yet regain the functions once the error is removed.

### Features

- Current ratings from 1.75 to 6.0A
- Maximum electrical rating: 6VDC and short circuit current 50A
- Halogen free (Br≤900ppm, Cl≤900ppm, and Br+Cl≤1500ppm)
- Ultra low internal resistance
- Automatic Reset
- RoHS Complaint, lead-free and halogen free

### Applications

- Mobile and smart phones
- Wearable devices
- Portable game console
- VR/AR head mount display (HMD)
- Tablets and eBook
- Portable printer and projector
- Li-Ion battery Powered Mobile Devices
- USB Connection Ports

### Physical Specifications

|                                |                                                                                                       |
|--------------------------------|-------------------------------------------------------------------------------------------------------|
| Terminal Pad Materials         | Gold with Nickel Underplate                                                                           |
| Soldering Characteristics      | ANSI/J-STD-002 Category 3                                                                             |
| Solder Heat Withstand          | per IEC-STD 68-2-20, Test Tb, Section 5, Method 1A                                                    |
| Flammability Resistance        | per IEC 695-2-2 Needle Flame Test for 20 sec.                                                         |
| Recommended Storage Conditions | 40°C max, 70% R.H. max;<br>Devices May Not Meet Specified Ratings if Storage Conditions Are Exceeded. |

### Soldering Parameters

|                                                       |                                    |                  |
|-------------------------------------------------------|------------------------------------|------------------|
| Profile Feature                                       |                                    | Pb-Free assembly |
| Pre Heat                                              | - Temperature Min ( $T_{s(min)}$ ) | 150°C            |
|                                                       | - Temperature Max ( $T_{s(max)}$ ) | 200°C            |
|                                                       | - Time (min to max) ( $t_s$ )      | 60 – 120 seconds |
| Average ramp up rate (Liquidus Temp ( $T_L$ ) to peak |                                    | 3°C/second max   |
| $T_{S(max)}$ to $T_L$ - Ramp-up Rate                  |                                    | 3°C/second max   |
| Reflow                                                | - Temperature ( $T_L$ ) (Liquidus) | 217°C            |
|                                                       | - Temperature ( $t_L$ )            | 60 – 150 seconds |
| Peak Temperature ( $T_p$ )                            |                                    | 260°C            |
| Time within 5°C of actual peak Temperature ( $t_p$ )  |                                    | 30 seconds max   |
| Ramp-down Rate                                        |                                    | 2°C/second max   |
| Time 25°C to peak Temperature ( $T_p$ )               |                                    | 8 minutes max    |

#### Notes:

- All temperature refer to topside of the package, measured on the package body surface.
- If reflow temperature exceeds the recommended profile, devices may not meet the performance requirements.
- Recommended reflow methods: IR, vapor phase oven, hot air oven,  $N_2$  environment for lead.
- Recommended maximum paste thickness is 0.25 mm (0.010 inch).
- Devices can be cleaned using standard industry methods and solvents.
- Devices can be reworked using the standard industry practices.

| <b>W<sub>2</sub> max</b> | 14.4             | 14.4              |

Standard Pack Quantity: 3,000 pcs  
Minimum Order Quantity: 15,000 pcs

### Installation and Handling Guidelines

- Operation of these devices beyond the stated maximum ratings could result in damage to the devices and lead to electrical arcing and/or fire.
- These devices are intended to protect against the effects of temporary over-current or over-temperature conditions and are not intended to perform as protective devices where such conditions are expected to be repetitive or prolonged in duration.
- Exposure to silicon-based oils, solvents, electrolytes, acids, and similar materials can adversely affect the performance of these PPTC devices.
- These devices undergo thermal expansion under fault conditions, and thus shall be provided with adequate space and be protected against mechanical stresses.
- Circuits with inductance may generate a voltage ( $L di/dt$ ) above the rated voltage of the PPTC device.
- Hand-soldering of PTC devices on boards is generally not recommended. Users shall define and verify this process if needed.
- Consult Littelfuse when the device is to be applied with thermal processes other than reflow process on the circuit board, such as molding, encapsulation. User should evaluate molding materials used in the charging cable applications to ensure there are no adverse effect on the PTC devices.

### Warning

- Users should independently evaluate the suitability of and test each product selected for their own application.
- Operation beyond the maximum ratings or improper use may result in device damage and possible electrical arcing and flame.
- These devices are intended for protection against damage caused by occasional overcurrent or overtemperature fault conditions and should not be used when repeated fault conditions or prolonged trip events are anticipated.
- Contamination of the PPTC material with certain silicone-based oils or some aggressive solvents can adversely impact the performance of the devices.
- Device performance can be impacted negatively if devices are handled in a manner inconsistent with recommended electronic, thermal, and mechanical procedures for electronic components.
- PPTC devices are not recommended for installation in applications where the device is constrained such that its PTC properties are inhibited, for example in rigid potting materials or in rigid housings, which lack adequate clearance to accommodate device expansion.
- Operation in circuits with a large inductance can generate a circuit voltage ( $L di/dt$ ) above the rated voltage of the device.

### Disclaimer Notice

Information furnished is believed to be accurate and reliable. However, users should independently evaluate the suitability of and test each product selected for their own applications. Littelfuse products are not designed for, and shall not be used for, any purpose (including, without limitation, military, aerospace, medical, life-saving, life-sustaining or nuclear facility applications, devices intended for surgical implant into the body, or any other application in which the failure or lack of desired operation of the product may result in personal injury, death, or property damage) other than those expressly set forth in applicable Littelfuse product documentation. Warranties granted by Littelfuse shall be deemed void for products used for any purpose not expressly set forth in applicable Littelfuse documentation. Littelfuse shall not be liable for any claims or damages arising out of products used in applications not expressly intended by Littelfuse as set forth in applicable Littelfuse documentation. The sale and use of Littelfuse products is subject to Littelfuse Terms and Conditions of Sale, unless otherwise agreed by Littelfuse.
