

CURRENT MODE FLYBACK PWM SWITCHING REGULATOR

■ GENERAL DESCRIPTION

NJM2362 is the current mode flyback type, switching supply voltage IC.

Totempole type output, which can drive MOSFET in high speed operation directly.

As to the functional protection, internalizing UVLO that can prevent from miss motion at low input voltage operation, pulse by pulse current limit for primary current of transformer, remote off circuit that can stop the entire motions by the external voltage, the over saturate protection circuit that stops the output by detecting the saturated state of the transformer.
