

| Type    | Ordering code | Package  |
|---------|---------------|----------|
| SAS 580 | Q 67000-S28   | } DIP 18 |
| SAS 590 | Q 67000-S29   |          |

Channel memory for use in radio and TV sets. The four stages can be selected by touching the sensor area. Each stage is provided with an indicator output. The tuning voltage is applied to a common output. SAS 580 is the basic component for the first 4 channels. The number of channels can be increased by 4 with each additionally connected SAS 590 amplifier.

### Features

- High input sensitivity
- Low saturation voltage of the driver outputs
- Low temperature drift of the tuning switches
- Driver outputs to control filament lamps, LEDs, neon lamps, or nixie tubes
- Standby operation possible
- Ring counter up to 10 kHz
- No external diode matrix
- Single power supply

### Maximum ratings
