Notes:

1. A start-up delay of 200 µs is required after power-up, followed by a minimum of eight initialization cycles ($\overline{RAS}$-only refresh or $\overline{CAS}$ before $\overline{RAS}$ refresh) before proper device operation is achieved.
2. The AC characteristics assume $t_T = 5$ ns.
3. $V_{IH}$ (Min.) and $V_{IL}$ (Max.) are reference levels for measuring input timing signals. Transition times ($t_T$) are measured between $V_{IH}$ and $V_{IL}$.
4. This parameter is measured with a load circuit equivalent to 2 TTL loads and 100 pF.
5. Operation within the $t_{RCD}$ (Max.) limit ensures that $t_{RAC}$ (Max.) can be met. $t_{RCD}$ (Max.) is specified as a reference point only. If $t_{RCD}$ is greater than the specified $t_{RCD}$ (Max.) limit, access time is controlled by $t_{CAC}$.
6. Operation within the $t_{RAD}$ (Max.) limit ensures that $t_{RAC}$ (Max.) can be met. $t_{RAD}$ (Max.) is specified as a reference point only. If $t_{RAD}$ is greater than the specified $t_{RAD}$ (Max.) limit, access time is controlled by $t_{AA}$.
7. $t_{OFF}$ (Max.) and $t_{OEZ}$ (Max.) define the time at which the output achieves the open circuit condition and are not referenced to output voltage levels.
8. $t_{RCH}$ or $t_{RRH}$ must be satisfied for a read cycle.
9. $t_{WCS}$, $t_{CWD}$, $t_{RWD}$, $t_{AWD}$ and $t_{CPWD}$ are not restrictive operating parameters. They are included in the data sheet as electrical characteristics only. If $t_{WCS} \geq t_{WCS}$ (Min.), the cycle is an early write cycle and the data out will remain open circuit (high impedance) throughout the entire cycle. If $t_{CWD} \geq t_{CWD}$ (Min.), $t_{RWD} \geq t_{RWD}$ (Min.), $t_{AWD} \geq t_{AWD}$ (Min.) and $t_{CPWD} \geq t_{CPWD}$ (Min.), the cycle is a read modify write cycle and data out will contain data read from the selected cell; if neither of the above sets of conditions is satisfied, the condition of the data out (at access time) is indeterminate.
10. These parameters are referenced to $\overline{CAS}$ leading edge in an early write cycle, and to $\overline{WE}$ leading edge in an $\overline{OE}$ control write cycle or a read modify write cycle.
11. Only SL version.
