Note (7) Definition of crosstalk CT(1) ~ CT(4)

$$CT(n) = \frac{|L(n) - LB(n)|}{L(n)} \times 100\% , n = 1 \sim 4$$

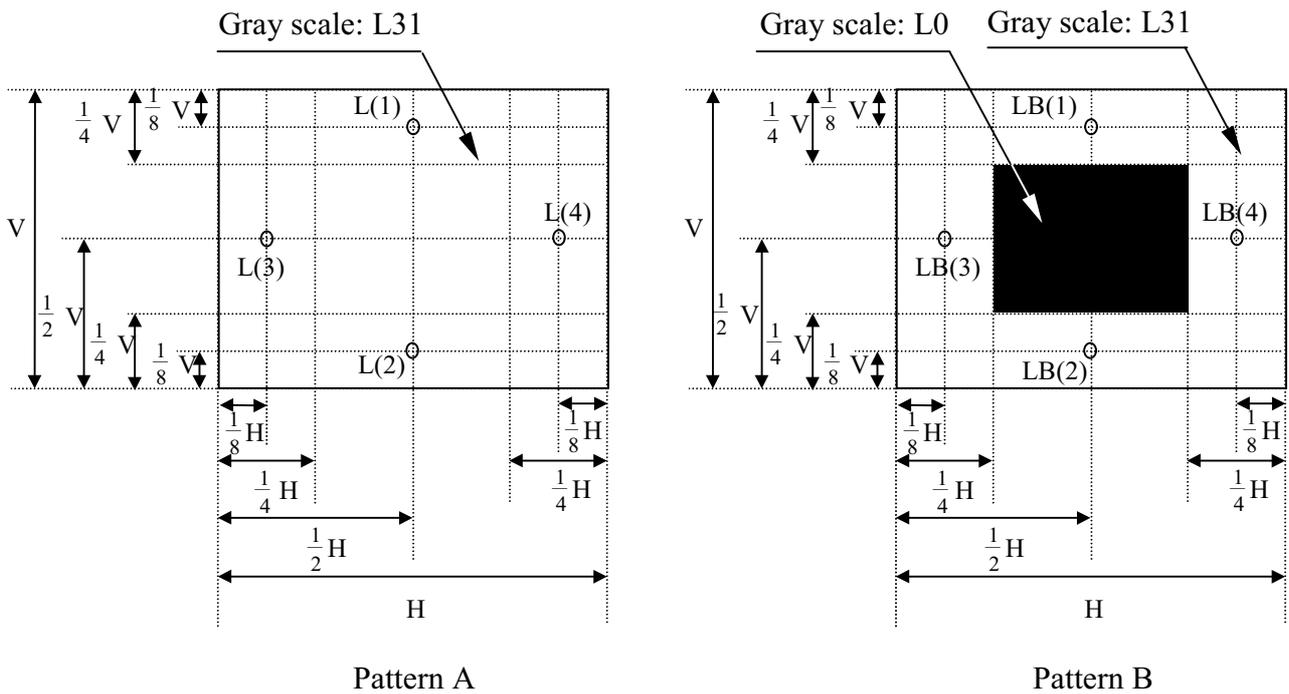

Where L(n) = Luminance of point "n" at pattern A (cd/m<sup>2</sup>) , n=1~4

LB(n) = Luminance of point "n" at pattern B (cd/m<sup>2</sup>) , n=1~4

The location measured will be exactly the same in both patterns.

L0 : Luminance with all pixels black

L63 : Luminance with all pixels white

#### 4.2 Back-Light Unit

The back-light system is an edge-lighting type with 1 CCFL(Cold Cathode Fluorescent Lamp). The characteristics of the lamp1 is shown in the following tables.

Item	Symbol	Min.	Typ.	Max.	Unit	Note
Lamp current	IL	5.5	6.0	6.5	mA(rms)	(1)
Lamp voltage	VL	540	600	660	V(rms)	$I_L=6.0mA$
Frequency	fL	40	(51)	60	KHz	(2)
Operating life time	Hr	10,000	15,000	--	Hour	(3)
Startup voltage	Vs	--	--	700	V(rms)	at 25°C
				910		at 0°C

Note (1) Lamp current is measured with current meter for high frequency as shown below. Specified valued are for a lamp.

Note (2) Lamp frequency may produce interference with horizontal synchronous frequency and this may cause line flow on the display. Therefore lamp frequency shall be detached from the horizontal synchronous frequency and its harmonics as far as possible in order to avoid interference.

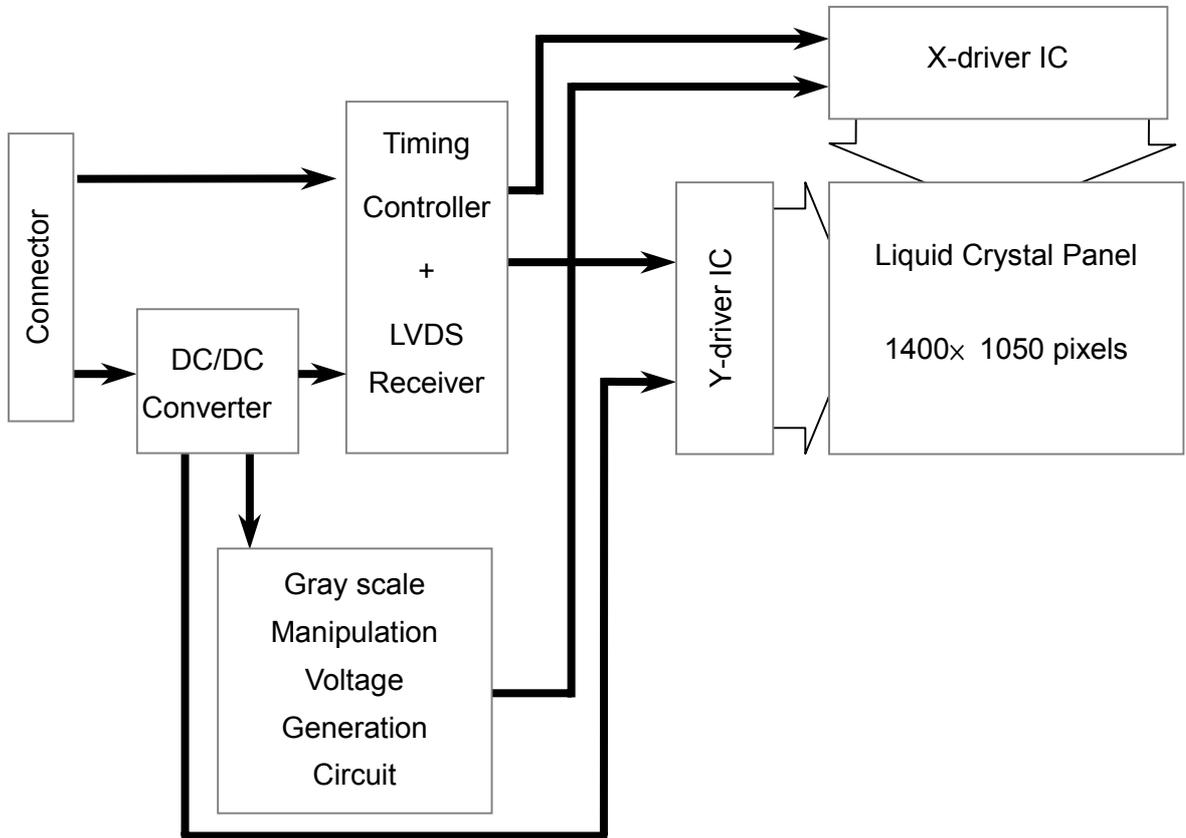

Note (3) Life time (Hr) can be defined as the time in which it continues to operate under the condition :  $T_a=25\pm 3^\circ C$ ,  $I_L=6.0mA(rms)$  and  $f_L=51kHz$  until one of the following event occurs :

1. When the brightness becomes 50%
2. When the startup voltage( $V_s$ ) at  $0^\circ C$  becomes higher than the maximal Value of  $V_s$  specified above.

Note 1) Refer to “2.4.3 Timing Chart” and LVDS(THC63LVDF84A) specifications by THine Electronic, Inc..

Note 2) If ENAB is fixed to “H” or “L” level for certain period while NCLK is supplied, the panel displays black with some flicker.

Note 3) If NCLK is fixed to “H” or “L” level for certain period while ENAB is supplied, the panel may be damaged.

Note 4) Please adjust LCD operating signal timing and FL driving frequency, to optimize the display quality. There is a possibility that flicker is observed by the interference of LCD operating signal timing and FL driving condition(especially driving frequency), even if the condition satisfies above timing specifications and recommended operating conditions shown in 3.

Note 5) Do not make t1, t2, t3 and tvds fluctuate. If t1, t2, t3 and tvds are fluctuate, the panel displays black.

Note 6) In case of using the long frame period, the deterioration of display quality, noise etc. may be occurred.

Note 7) NCLK count of each Horizontal Scanning Time should be always the same.

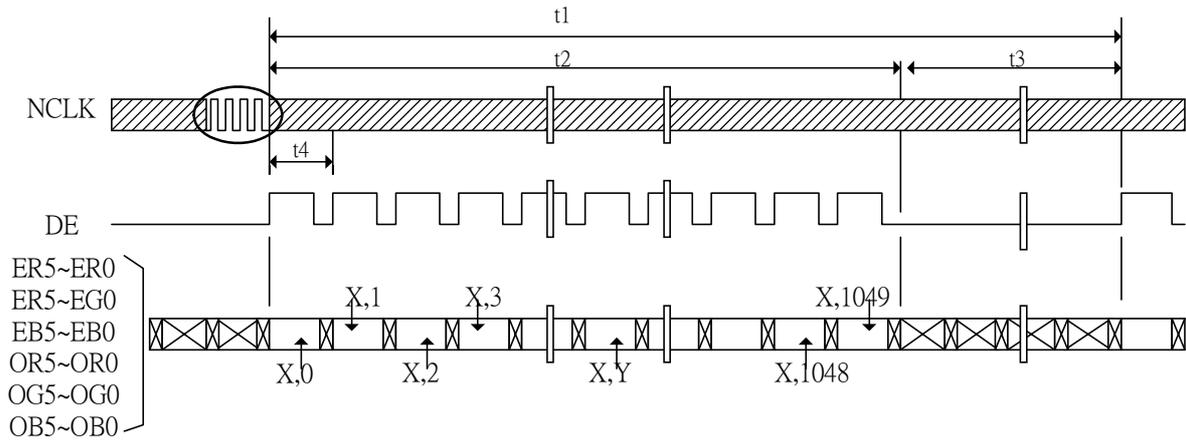

V-Blanking period should be “n” X “Horizontal scanning Time” (n : integer).

Frame period should be always the same.

T6	200	—	—	msec	

Note (1) The supply voltage of the external system for the module input should be the same as the definition of  $V_{DD}$ .

(2) Apply the lamp voltage within the LCD operation range. When the back-light turns on before the LCD operation or the LCD turns off before the back-light turns off, the display may momentarily become white.

(3) In case of  $V_{DD}$  = off level, please keep the level of input signal on the low or keep a high impedance.

(4) T4 should be measured after the module has been fully discharged between power off and on period.

(5) Interface signal shall not be kept at high impedance when the power is on.

## 10.0 GENERAL PRECAUTION

### 10.1 Use Restriction

This product is not authorized for use in life supporting systems, aircraft navigation control systems, military systems and any other application where performance failure could be life-threatening or otherwise catastrophic.

### 10.2 Disassembling or Modification

Do not disassemble or modify the module. It may damage sensitive parts inside LCD module, and may cause scratches or dust on the display. HannStar does not warrant the module, if customers disassemble or modify the module.

### 10.3 Breakage of LCD Panel

10.3.1 If LCD panel is broken and liquid crystal spills out, do not ingest or inhale liquid crystal, and do not contact liquid crystal with skin.

10.3.2 If liquid crystal contacts mouth or eyes, rinse out with water immediately.

10.3.3 If liquid crystal contacts skin or cloths, wash it off immediately with alcohol and rinse thoroughly with water.

10.3.4 Handle carefully with chips of glass that may cause injury, when the glass is broken.

### 10.4 Electric Shock

10.4.1 Disconnect power supply before handling LCD module.

10.4.2 Do not pull or fold the CCFL cable.

10.4.3 Do not touch the parts inside LCD modules and the fluorescent lamp's connector or cables in order to prevent electric shock.

### 10.5 Absolute Maximum Ratings and Power Protection Circuit

10.5.1 Do not exceed the absolute maximum rating values, such as the supply voltage variation, input voltage variation, variation in parts' parameters, environmental temperature, etc., otherwise LCD module may be damaged.

10.5.2 Please do not leave LCD module in the environment of high humidity and high temperature for a long time.

10.5.3 It's recommended to employ protection circuit for power supply.

### 10.6 Operation

10.6.1 Do not touch, push or rub the polarizer with anything harder than HB pencil lead.

10.6.2 Use fingerstalls of soft gloves in order to keep clean display quality, when persons handle the LCD module for incoming inspection or assembly.

10.6.3 When the surface is dusty, please wipe gently with absorbent cotton or other soft material.

Document Title	HSD141PK11-A Specification(Formal)	Page No.	30 / 33
Document No.		Revision	1.0

10.6.4 Wipe off saliva or water drops as soon as possible. If saliva or water drops contact with polarizer for a long time, they may causes deformation or color fading.

10.6.5 When cleaning the adhesives, please use absorbent cotton wetted with a little petroleum benzine or other adequate solvent.

**10.7 Mechanism**

Please mount LCD module by using mouting holes arranged in four corners tightly.

**10.8 Static Electricity**

10.8.1 Protection film must remove very slowly from the surface of LCD module to prevent from electrostatic occurrence.

10.8.2 Because LCD module use CMOS-IC on circuit board and TFT-LCD panel, it is very weak to electrostatic discharge. Please be careful with electrostatic discharge. Persons who handle the module should be grounded through adequate methods.

**10.9 Strong Light Exposure**

The module shall not be exposed under strong light such as direct sunlight. Otherwise, display characteristics may be changed.

**10.10 Disposal**

When disposing LCD module, obey the local environmental regulations.
