Features

- Excellent Carrier Suppression ~34dBc
- 6.0 dB Typical Modulator Conversion Loss
- +17 to +20 dBm LO Drive
- High 3x1 and 5x1 Harmonic Suppression
- No External Matching Required
- Low Cost Miniature Plastic MLP Package
- Lead Free and RoHS Compliant

Description and Application

M/A-COM's MAMO-000900-1291HT is a silicon monolithic 850-960 MHz, medium barrier, I/Q Modulator/Demodulator. Encapsulated in a low cost, miniature surface mount PQFN 6mm square, 28-lead plastic package the die utilizes M/A-COM's unique HMIC silicon/glass process. This process enables the realization of low loss passive elements and efficient diode technology which in turn provides excellent harmonic suppression. In addition, the incorporated monolithic design techniques provide unparalleled amplitude and phase imbalance performance during demodulation thus adding to the unit's overall versatility.

These modulators/demodulators are well suited for GSM and CDMA Cellular basestation applications, as well as most RFID systems, particularly where small size and high performance are required. Typical applications include quadrature modulation requirements in wireless receivers and transmitters.

Absolute Maximum Ratings¹

Parameter	Maximum Ratings
Operating Temperature	-40 °C to +85 °C
Storage Temperature	-65 °C to +150 °C
Incident LO Power	+20 dBm C.W.
Incident RF Power	+20 dBm C.W.

1. Exceeding these limits may cause permanent damage.
