## THICK FILM RESISTOR NETWORK (SIP TYPE)

Thick film resistor networks have metal glaze elements on the ceramic substrates with strong clip-construction terminals, and are coated with special epoxy resin. They are originally designed, as a style of single in line package, and are the most suitable to meet the density of circuit assembling.

### Features:

1. Small in size with high precision package. It is suitably used in printed circuit board.
2. Automated machinery mass production and competitive prices accordingly.
3. Extremely high stability, accuracy and reliability.
