Discontinued Product

OKI Semiconductor

MSM6577-xx

Operatable at 0.9V and Built-in LCD Driver 4-Bit Microcontroller

GENERAL DESCRIPTION

The MSM6577 is a 4-bit microcontroller that is fabricated in OKI's low-voltage CMOS technology, enabling operation at 0.9 V. This device incorporates LCD drivers, 8-bit synchronous serial ports, and a buzzer output circuit. The MSM6577 is optimized for remote-control microcontroller applications that are portable and battery powered.
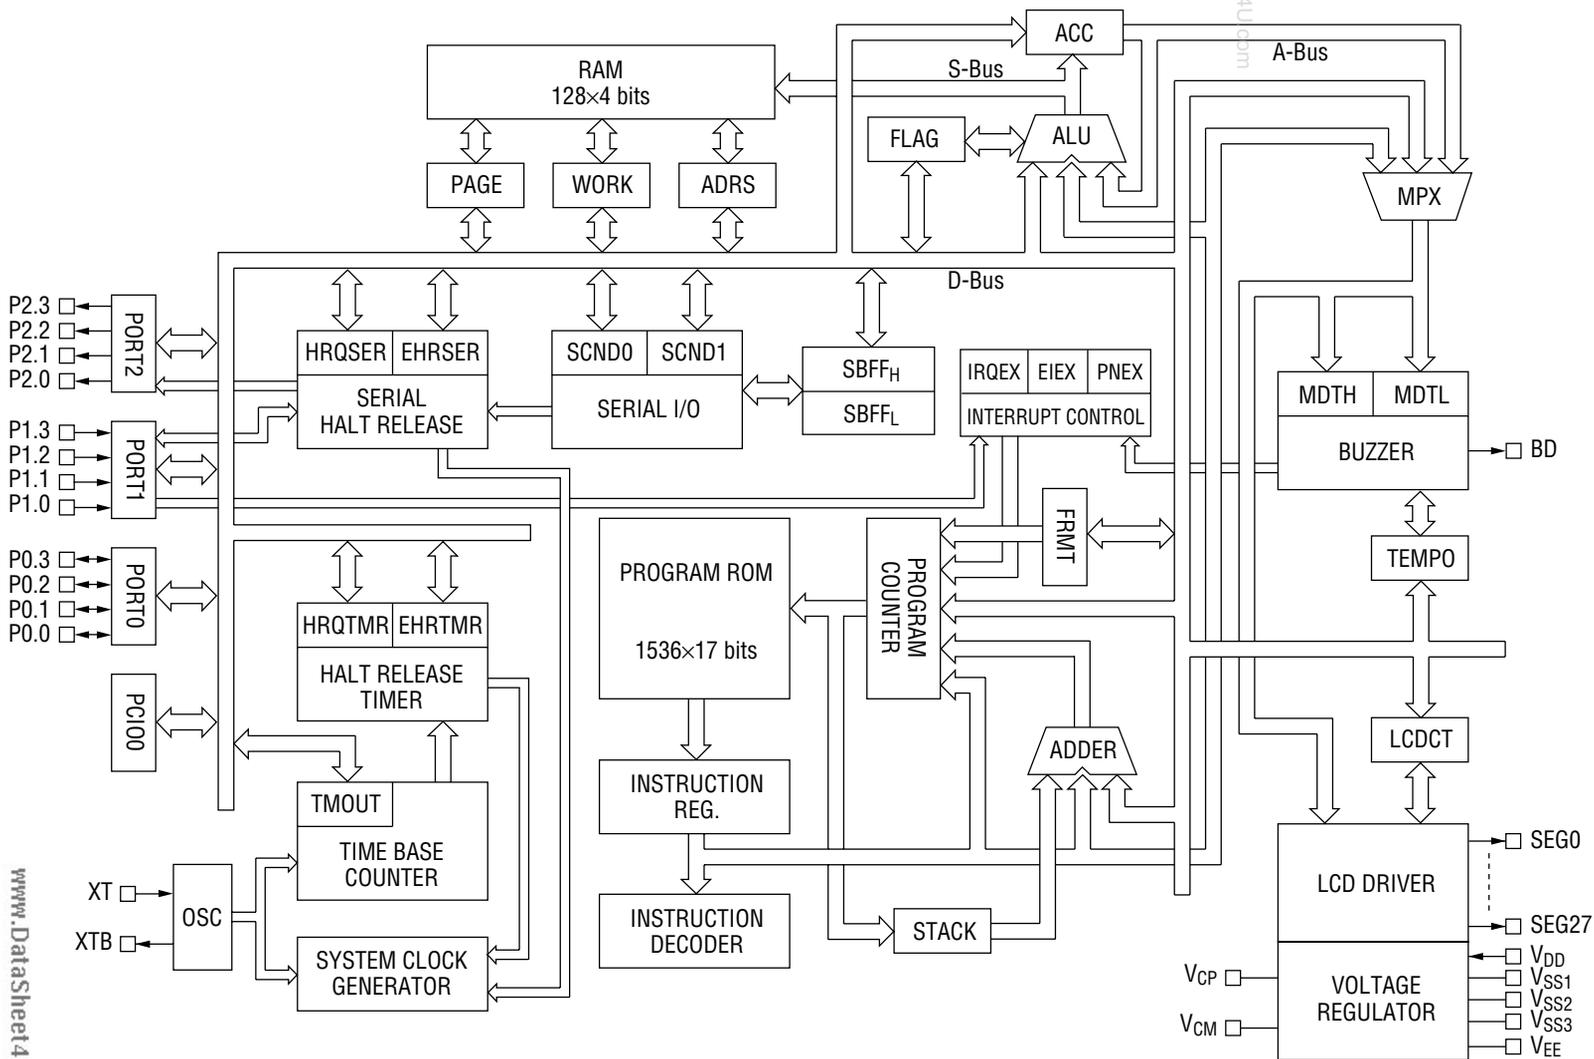

FEATURES

- Operating range
  - Operating frequency : 32.768 kHz
  - Operating voltage   1.5 V operation : MSM6577K/N/S/U
  -    3.0 V operation : MSM6577L/C/D/E
    (See Mask Option List.)
  - Operating temperature : −20 to +70°C
- Memory space   ROM : 1536 words × 17 bits
  -    RAM : 128 words × 4 bits
- Minimum instruction execution time : 61 μs
- I/O port
  - Input-output port : 1 port × 4 bits
  - Input only port : 1 port × 4 bits
  - Output only port : 1 port × 4 bits
- Serial port : 8-bit clock synchronous type
- LCD drivers : 28
  - Duty and frame frequency are selectable by the mask options.
  - 1/3 duty, 1/3 bias : Up to 75 segments
  - 1/2 duty, 1/3 bias : Up to 52 segments
- Halt release timers : 4
  - Timer frequency is selectable by the mask options.
- External interrupt : 4
- Buzzer output : 1
- Clock : 32.768 kHz crystal oscillator
  - Oscillation starts at 0.9 V.
- Power supply voltage : 1.5 V/3.0 V (selectable by mask option)
  (See Mask Option List)

- Package options:
  - 56-pin plastic QFP (QFP56-P-910-0.65-K)   (Product name : MSM6577□-xxGS-K)
  - 56-pin plastic QFP (QFP56-P-910-0.65-2K)   (Product name : MSM6577□-xxGS-2K)
  - Chip
  xx indicates the code number.
  □ indicates the option code.

PIN CONFIGURATION (TOP VIEW)

Top pins (left to right): 56 RESET, 55 P2.3, 54 P2.2, 53 P2.1, 52 P2.0/SOUT, 51 P1.3/SIN, 50 P1.2/SCLK, 49 V_DD *, 48 P1.1, 47 P1.0, 46 P0.3, 45 P0.2, 44 P0.1, 43 P0.0

Left pins:
- SEG0 — 1
- SEG1 — 2
- SEG2 — 3
- SEG3 — 4
- SEG4 — 5
- SEG5 — 6
- SEG6 — 7
- SEG7 — 8
- SEG8 — 9
- SEG9 — 10
- SEG10 — 11
- SEG11 — 12
- SEG12 — 13
- SEG13 — 14

Right pins:
- 42 — SEG27
- 41 — SEG26
- 40 — SEG25
- 39 — SEG24
- 38 — SEG23
- 37 — SEG22
- 36 — SEG21
- 35 — SEG20
- 34 — SEG19
- 33 — SEG18
- 32 — SEG17
- 31 — SEG16
- 30 — SEG15
- 29 — SEG14

Bottom pins (left to right): 15 TEST, 16 (NC), 17 BD, 18 V_SS1, 19 XTB, 20 XT, 21 V_DD, 22 V_SS2, 23 V_SS3, 24 V_CM, 25 V_CP, 26 V_EE, 27 (NC), 28 (NC)

NC: No-connection pin

56-Pin Plastic QFP

*   Pin 49 (V_DD) is provided only when a 56-pin flat package is used.

PIN DESCRIPTIONS

Symbol	Type	Description				Circuit
PORT0 (P0.0 to P0.3)	I/O	• 4-bit input-output port • Input or output software selectable. • A pull-up resistor or pull-down resistor can be selected for each bit (P0.0 to P0.3) (via mask option). • When using port as output, the pull-up or pull-down resistor is disconnected from the pin.				A
PORT1 (P1.0 to P1.3)	I	• 4-bit input port • Pull-up resistor or pull-down resistor can be selected for PORT1 (P1.0 to P1.3) (via mask option).	P1.0	External Interrupt ports	—	B
			P1.1			
			P1.2		Serial clock pin ···· $\overline{SCLK}$	C
			P1.3		Serial input pin ···· SIN	B
PORT2 (P2.0 to P2.3)	O	• 4-bit output port	P2.0		Serial output pin···· SOUT	D
			P2.1 to P2.3		—	E
BD	O	Buzzer output pin				E
RESET	I	• Reset input pin • System reset generation level "H" or "L" selectable (mask option) Note : If "H" is selected, pull-down resistor is used and if "L" is selected, pull-up resistor is used.				F
TEST	I	Test pin (Tie to the negative pole of the battery.)*				G
XT	I	Oscillation crystal connection pin				H
XTB	O					
V_{DD}	—	0V power supply pin				—
V_{SS1}	—	–1.5 V power supply pin (power supply pin for –1.5 V operation)				—
V_{SS2}	—	–3.0 V power supply pin (power supply pin for –3.0 V operation)				—
V_{SS3}	—	–4.5 V power supply pin				—
V_{CP} V_{CM}	—	Capacitor connection pin for voltage converter				—
V_{EE}	—	Internal logic power supply pin (voltage regulator output pin)				—
SEG0 to SEG27	O	Liquid crystal display driving pins				I

*   3.0 V operation ...... $V_{SS} = V_{SS2}$
     1.5 V operation ...... $V_{SS} = V_{SS1}$

ABSOLUTE MAXIMUM RATINGS (MSM6577K/77N/77S/77U)

1.5 V operation • Backup flag (BUF)="0"
The input of the constant voltage circuit corresponds to the output of the voltage converter
(V_{SS2}). V_{DD}=0 V (V_{SS1}=Battery Voltage)

Parameter	Symbol	Condition	Rating	Unit
Power Supply Voltage 1	V_{SS1}		−4.0 to +0.3	
Power Supply Voltage 2	V_{SS2}		−7.0 to +0.3	
Power Supply Voltage 3	V_{SS3}		−7.0 to +0.3	
Input Voltage	V_{IN}	Ta=25°C	V_{SS1}−0.3 to +0.3	V
Output Voltage 1 *1,*2	V_{O1}		V_{SS1}−0.3 to +0.3	
Output Voltage 2 *2	V_{O2}		V_{SS2}−0.3 to +0.3	
Output Voltage 3 *2	V_{O3}		V_{SS3}−0.3 to +0.3	
Storage Temperature	T_{STG}	—	−55 to +125	°C

*1 Normal output
*2 LCD driver output

RECOMMENDED OPERATING CONDITIONS (MSM6577K/77N/77S/77U)

1.5 V operation • Backup flag (BUF)="0"
The input of the constant voltage circuit corresponds to the output of the voltage converter
(V_{SS2}). V_{DD}=0 V (V_{SS1}=Battery Voltage)

Parameter	Symbol	Condition	Range	Unit
Operating Voltage	V_{op}	—	−0.9 to −1.75	V
Operating Temperature	T_{op}	—	−20 to +70	°C
Oscillation Frequency	f_{OSC}	—	32.768	kHz

ELECTRICAL CHARACTERISTICS (MSM6577K/77N/77S/77U)

1.5 V operation •Backup flag (BUF)="0"

The input of the constant voltage circuit corresponds to the output of the voltage converter (V_{SS2}). (V_{DD}=0 V, V_{SS1}=–1.5 V (Battery Voltage), V_{SS2}=–3.0 V, V_{SS3}=–4.5 V, f_{OSC}=32.768 kHz, C_X=35 pF, Ta=25°C)

MSM6577C: System reset by a "H" level without a pull-down resistor
MSM6577D: System reset by a "L" level with a pull-up resistor
MSM6577E: System reset by a "L" level without a pull-up resistor

MASK OPTION LIST

The device names for the MSM6577-xx are differentiated as follows, depending on the combination of a power supply voltage and RESET pin function.

| No.	Battery	RESET Pin Function	Device
1	1.5 V operation	System reset by a "H" level with a pull-down resistor	MSM6577K-xx
2	1.5 V operation	System reset by a "H" level without a pull-down resistor	MSM6577N-xx
3	1.5 V operation	System reset by a "L" level with a pull-up resistor	MSM6577S-xx
4	1.5 V operation	System reset by a "L" level without a pull-up resistor	MSM6577U-xx
5	3.0 V operation	System reset by a "H" level with a pull-down resistor	MSM6577L-xx
6	3.0 V operation	System reset by a "H" level without a pull-down resistor	MSM6577C-xx
7	3.0 V operation	System reset by a "L" level with a pull-up resistor	MSM6577D-xx
8	3.0 V operation	System reset by a "L" level without a pull-up resistor	MSM6577E-xx

NOTES ON USE

Power Supply for 0.9 V Microcontroller Series: Backup Flag and Constant-Voltage Circuit

The 0.9 V microcontroller series have a built-in constant-voltage circuit. The output of this constant-voltage circuit powers the microcontroller's internal logic circuits. Setting a backup flag (BUF) allows the input of the constant voltage circuit to be switched to either the battery or the output generated in the voltage converter, based on the battery voltage. A battery voltage of 1.5 V or 3.0 V can be selected.

* The V_{SS3} pin is provided for the devices that contain an LCD driver.
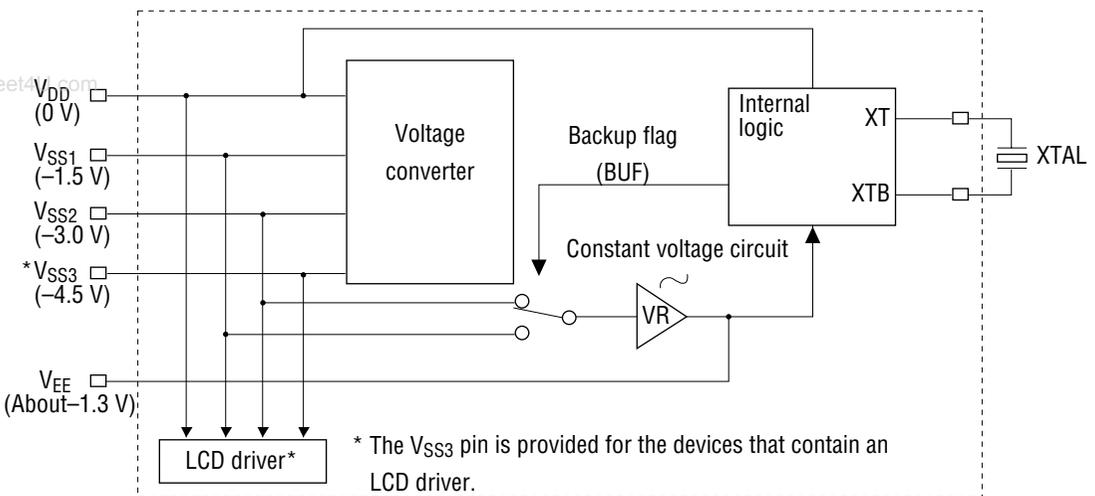

The output (V_{EE}) of the constant-voltage circuit is set at approximately –1.3 V. This allows the current consumed by the internal logic to be limited, irrespective of the battery voltage. However, if the input of the constant voltage circuit is below this set value (about –1.3 V), the output (V_{EE}) is equal to the input. The 0.9 V microcontroller can be operated even if the internal voltage (output from the constant-voltage circuit) falls to 0.9 V. Setting the backup flag allows a larger operating voltage margin despite changes in internal voltage due to noise. For example, for the 1.5 V operation, setting the backup flag to "0" supplies twice the battery voltage to the constant-voltage circuit. Thus, even if the battery voltage falls to 0.9 V, the output voltage (V_{EE}) is maintained at –1.3 V, providing a larger margin of operating voltage of the internal logic circuits because 1.8 V is applied to the input of the constant-voltage circuit. Figures 1 to 4 show the internal status depending on the backup flag settings for the battery, as well as status features.
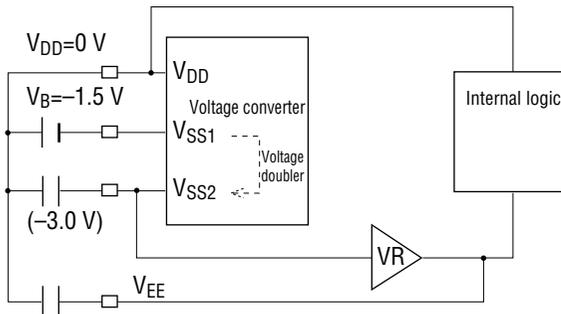

(Figure 1) 1.5 V Operation (Backup Flag="1")
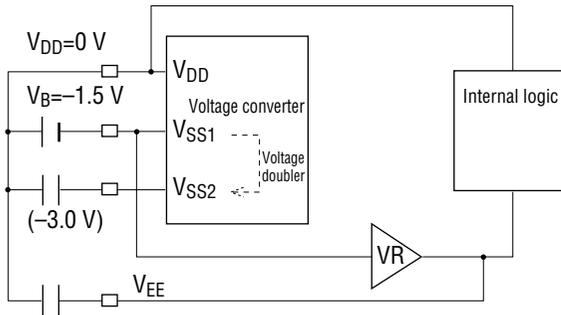

| Internal status	The battery level V_{SS1} is applied to the input of the constant voltage circuit.
Operating range	−0.9 to −1.75 V
Current consumption	1.5 µA*
Feature	When the battery level is powered down, the internal circuit is powered directly by the battery.

* When the software duty is about 5%

(Figure 2) 1.5 V Operation (Backup Flag="0")

Internal status	A doubled level of V_{SS2} is applied to the input of the constant voltage circuit.
Operating range	−0.9 to −1.75 V
Current consumption	3 µA*
Feature	When the baftery level is powered down, a larger operating voltage margin is gained, compared to the case of Figure 1.

* When the software duty is about 5%

(Figure 3) 3.0 V Operation (Backup Flag="1")

Internal status	The battery level V_{SS2} is applied to the input of the constant voltage circuit.
Operating range	−0.9 to −3.5 V
Current consumption	1.5 µA*
Feature	When the battery level is powered down, the internal circuit is powered directly by the battery.

* When the software duty is about 5%

(Figure 4) 3.0 V Operation (Backup Flag="0")

| Internal status	A doubled level of V_{SS1} is applied to the input of the constant voltage circuit.
Operating range	−1.8 to −3.5 V
Current consumption	0.75 µA*
Feature	When the battery level is powered down, a smaller operating voltage margin is gained, compared to the case of Figure 3.

* When the software duty is about 5%

PACKAGE DIMENSIONS

(Unit : mm)

QFP56-P-910-0.65-K

Package material	Epoxy resin
Lead frame material	42 alloy
Pin treatment	Solder plating
Solder plate thickness	5 μm or more
Package weight (g)	0.36 TYP.

Notes for Mounting the Surface Mount Type Package

The SOP, QFP, TSOP, SOJ, QFJ (PLCC), SHP and BGA are surface mount type packages, which are very susceptible to heat in reflow mounting and humidity absorbed in storage.
Therefore, before you perform reflow mounting, contact Oki's responsible sales person for the product name, package name, pin number, package code and desired mounting conditions (reflow method, temperature and times).

(Unit : mm)

QFP56-P-910-0.65-2K

Package material	Epoxy resin
Lead frame material	42 alloy
Pin treatment	Solder plating
Solder plate thickness	5 μm or more
Package weight (g)	0.43 TYP.

Notes for Mounting the Surface Mount Type Package

The SOP, QFP, TSOP, SOJ, QFJ (PLCC), SHP and BGA are surface mount type packages, which are very susceptible to heat in reflow mounting and humidity absorbed in storage.
Therefore, before you perform reflow mounting, contact Oki's responsible sales person for the product name, package name, pin number, package code and desired mounting conditions (reflow method, temperature and times).
