**DESCRIPTION**

AA8334 is an analog stereo enhancement processor. It creates a stereo image with depth in three dimensions from ordinary left and right input channels. The patented QXpander (\*1) technology developed by QSound Labs, Inc., is faithfully implemented by Agamem(\*2).

Note 1: QXpander® is a stereo to 3D enhancement processor and is a trademark of QSound Labs, Inc...

Note 2: Agamem has got licensing agreement of QXpander® from QSound Labs, Inc...

**FEATURES**

- Sound spreading can be easily adjusted using an external VR.
- Few external components required through use of internal filter circuit.
- QXpander on/off switching at TTL level.

**APPLICATIONS**

- Sound enhancement processor for LCD TV, home theater, PC, notebook and car stereo.

PIN NO.	PIN NAME	PIN FUNCTION
1	RIN	Input pin R
2	VREF	DC reference voltage pin
3	S/3D	STEREO/3D (QXpander) sound switch pin
4	FC	Filter frequency control pin
5	SPC	Spread control pin
6	3DIN	3D (QXpander) input pin
7	ROUT	Output pin R
8	GND	GND pin
9	LOUT	Output pin L
10	DET	VCC off detect pin
11	3DF4	Filter pin 4
12	3DF3	Filter pin 3
13	3DF2	Filter pin 2
14	3DF1	Filter pin 1
15	LIN	Input pin L

**■ ABSOLUTE MAXIMUM RATINGS**

Ta=25°C

PARAMETER	SYMBOL	RATING	UNIT
Storage temperature	TSTG	-40~+125	°C
Operating temperature	TOPR	-40~+85	°C
Power supply voltage	VCC max.	12	V
Input voltage	VIN max.	0 ≤ VIN ≤ VCC	V
Output current	Io max.	10	mA
Allowable loss	Pd	350	mW

WARNING: Semiconductor devices can be permanently damaged by application of stress (voltage, current, temperature, etc.) in excess of absolute maximum ratings. Do not exceed these ratings.

**■ RECOMMENDED OPERATING RANGE**

Note 6: Input current of BYP terminal (pin 3) ( $V_{byp}=0v$ )

Note 7: The mute signal which switches off the power supply of a power amplifier that is connected with AA8334 appears in the 10 terminal. When the power supply of AA8334 is switched off, the pop noise occurs. We recommend muting the pop noise. The way is that the power supply of AA8334 is switched off after the power supply of the follow power amplifier is switched off.

Note 8: We recommend using the regulator for the power supply which occurs the ripple.

Note 9: When the signal is input in ZLIN, it is the ratio of pin 7 output voltage to pin 9 output voltage.

Note 10: When the signal is input in ZRIN, it is the ratio of pin 9 output voltage to pin 7 output voltage.

**APPLICATION CIRCUIT**

Note 1: Please see recommended operating conditions Note 1).

Note 2: Capacitor tolerance +/-5%

Note 3: Resistor tolerance +/-1%

Note 4: The QXpander effect (the spread effect) is adjusted with VR.

Note 5: We recommend using the regulator for the power supply which occurs the ripple.

Note 6: The mute signal which switches off the power supply of a power amplifier that is connected with AA8334 appears in the 10 terminal.

Note 7: When the power supply is switched on, the pop noise occurs. We recommend muting the pop noise by the power amplifier that is connected with AA8334.
