Service Manual

ORDER NO.
ARP3111

PLASMA DISPLAY

PDP-433PE

PDP-433PU

THIS MANUAL IS APPLICABLE TO THE FOLLOWING MODEL(S) AND TYPE(S).

| Type | Model | | Power Requirement | Remarks |
|-------|-----------|-----------|-------------------|---------|
| | PDP-433PE | PDP-433PU | | |
| WYVI6 | ○ | – | AC220 - 240V | |
| KUC | – | ○ | AC120V | |

● This Service Manual should be used together with the following manual(s).

| Model No. | Order No. | Remarks |
|------------------------|-----------|-----------------------------------|
| PDP-433PE PDP-433PU | ARP3112 | SCHEMATIC DIAGRAM and PCB DIAGRAM |

● This product is component of system.

| Component | System | | Service Manual | Remarks |
|-----------------------|------------|------------|--|---------------------|
| Plasma Display System | PDP-433HDE | PDP-4330HD | ————— | |
| Media Receiver | PDP-R03E | PDP-R03U | PDP-R03E : ARP3110 PDP-R03U : ARP3113 | |
| Plasma Display | PDP-433PE | PDP-433PU | ARP3111 ARP3112 | This service manual |

For details, refer to "Important symbols for good services".

SAFETY INFORMATION

This service manual is intended for qualified service technicians ; it is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual.

Improperly performed repairs can adversely affect the safety and reliability of the product and may void the warranty. If you are not qualified to perform the repair of this product properly and safely, you should not risk trying to do so and refer the repair to a qualified service technician.

WARNING

This product contains lead in solder and certain electrical parts contain chemicals which are known to the state of California to cause cancer, birth defects or other reproductive harm.

Health & Safety Code Section 25249.6 – Proposition 65

NOTICE

(FOR CANADIAN MODEL ONLY)

Fuse symbols  (fast operating fuse) and/or  (slow operating fuse) on PCB indicate that replacement parts must be of identical designation.

REMARQUE

(POUR MODÈLE CANADIEN SEULEMENT)

Les symboles de fusible  (fusible de type rapide) et/ou  (fusible de type lent) sur CCI indiquent que les pièces de remplacement doivent avoir la même désignation.

SAFETY PRECAUTIONS

NOTICE :Comply with all cautions and safety related notes located on or inside the cabinet and on the chassis.

The following precautions should be observed :

1. When service is required, even though the PDP UNIT an isolation transformer should be inserted between the power line and the set in safety before any service is performed.
2. When replacing a chassis in the set, all the protective devices must be put back in place, such as barriers, nonmetallic knobs, adjustment and compartment covershields, isolation resistor-capacitor, etc.
3. When service is required, observe the original lead dress. Extra precaution should be taken to assure correct lead dress in the high voltage circuitry area.
4. Always use the manufacture's replacement components. Especially critical components as indicated on the circuit diagram should not be replaced by other manufacture's. Furthermore where a short circuit has occurred, replace those components that indicate evidence of overheating.
5. Before returning a serviced set to the customer, the service technician must thoroughly test the unit to be certain that it is completely safe to operate without danger of electrical shock, and be sure that no protective device built into the set by the manufacture has become defective, or inadvertently defeated during servicing. Therefore, the following checks should be performed for the continued protection of the customer and service technician.
 6. Perform the following precautions against unwanted radiation and rise in internal temperature.
 - Always return the internal wiring to the original styling.
 - Attach parts (Gascket, Ferrite Core, Ground, Rear Cover, Shield Case etc.) surely after disassembly.
 7. Perform the following precautions for the PDP panel.
 - When the front case is removed, make sure nothing hits the panel face, panel corner, and panel edge (so that the glass does not break).
 - Make sure that the panel vent does not break. (Check that the cover is attached.)
 - Handle the FPC connected to the panel carefully. Twisting or pulling the FPC when connecting it to the connector will cause it to peel off from the panel.
 8. Pay attention to the following.
 - When the front case is removed, infrared ray is radiated and may disturb reception of the remote control unit.
 - Pay extreme caution when the front case and rear panel are removed because this may cause a high risk of disturbance to TVs and radios in the surrounding.

www.DataSheet4U.com

Leakage Current Cold Check

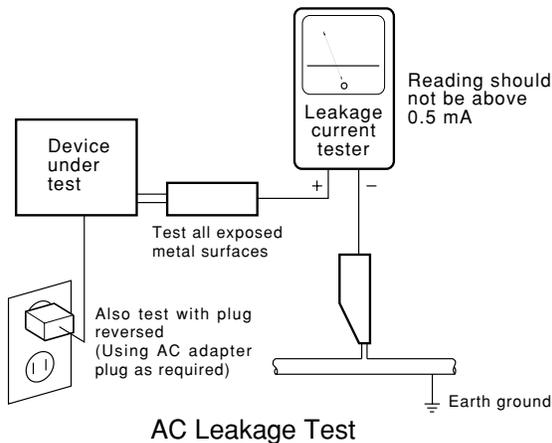

With the AC plug removed from an AC power source, place a jumper across the two plug prongs. Turn the AC power switch on. Using an insulation tester (DC 500V), connect one lead to the jumpered AC plug and touch the other lead to each exposed metal part (input/output terminals, screwheads, metal overlays, control shafts, etc.), particularly any exposed metal part having a return path to the chassis. Exposed metal parts having a return path to the chassis should have a minimum resistor reading of $0.3M\Omega$ and a maximum resistor reading of $5M\Omega$. Any resistor value below or above this range indicates an abnormality which requires corrective action. Exposed metal parts not having a return path to the chassis will indicate an open circuit.

Leakage Current Hot Check

Plug the AC line cord directly into an AC power source (do not use an isolation transformer for this check).

Turn the AC power switch on.

Using a "Leakage Current Tester (Simpson Model 229 equivalent)", measure for current from all exposed metal parts of the cabinet (input/output terminals, screwheads, metal overlays, control shaft, etc.), particularly any exposed metal part having a return path to the chassis, to a known earth ground (water pipe, conduit, etc.). Any current measured must not exceed 0.5mA.

ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE SET TO THE CUSTOMER.

PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in PIONEER set have special safety related characteristics. These are often not evident from visual inspection nor the protection afforded by them necessarily can be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in this Service Manual.

Electrical components having such features are identified by marking with a ⚠ on the schematics and on the parts list in this Service Manual.

The use of a substitute replacement component which does not have the same safety characteristics as the PIONEER recommended replacement one, shown in the parts list in this Service Manual, may create shock, fire or other hazards.

Product Safety is continuously under review and new instructions are issued from time to time. For the latest information, always consult the current PIONEER Service Manual. A subscription to, or additional copies of, PIONEER Service Manual may be obtained at a nominal charge from PIONEER.

CHARGED SECTION AND HIGH VOLTAGE GENERATING POINT

www.DataSheet4U.com

■ Charged Section

The places where the commercial AC power is used without passing through the power supply transformer.

If the places are touched, there is a risk of electric shock. In addition, the measuring equipment can be damaged if it is connected to the GND of the charged section and the GND of the non-charged section while connecting the set directly to the commercial AC power supply. Therefore, be sure to connect the set via an insulated transformer and supply the current.

1. AC Power Cord
2. AC Inlet with Filter
3. Power Switch (S1)
4. Fuse (In the SW POWER SUPPLY Module)
5. STB Transformer and Converter Transformer (In the SW POWER SUPPLY Module)
6. Other primary side of the SW POWER SUPPLY Module

■ High Voltage Generating Point

The places where voltage is 100V or more except for the charged places described above. If the places are touched, there is a risk of electric shock.

1. SW POWER SUPPLY Module (215V)
2. X DRIVE Assy (-280V to 215V)
3. Y DRIVE Assy (345V)
4. SCAN (A) Assy (345V)
5. SCAN (B) Assy (345V)
6. X CONNECTOR (A) Assy (-280V to 215V)
7. X CONNECTOR (B) Assy (-280V to 215V)

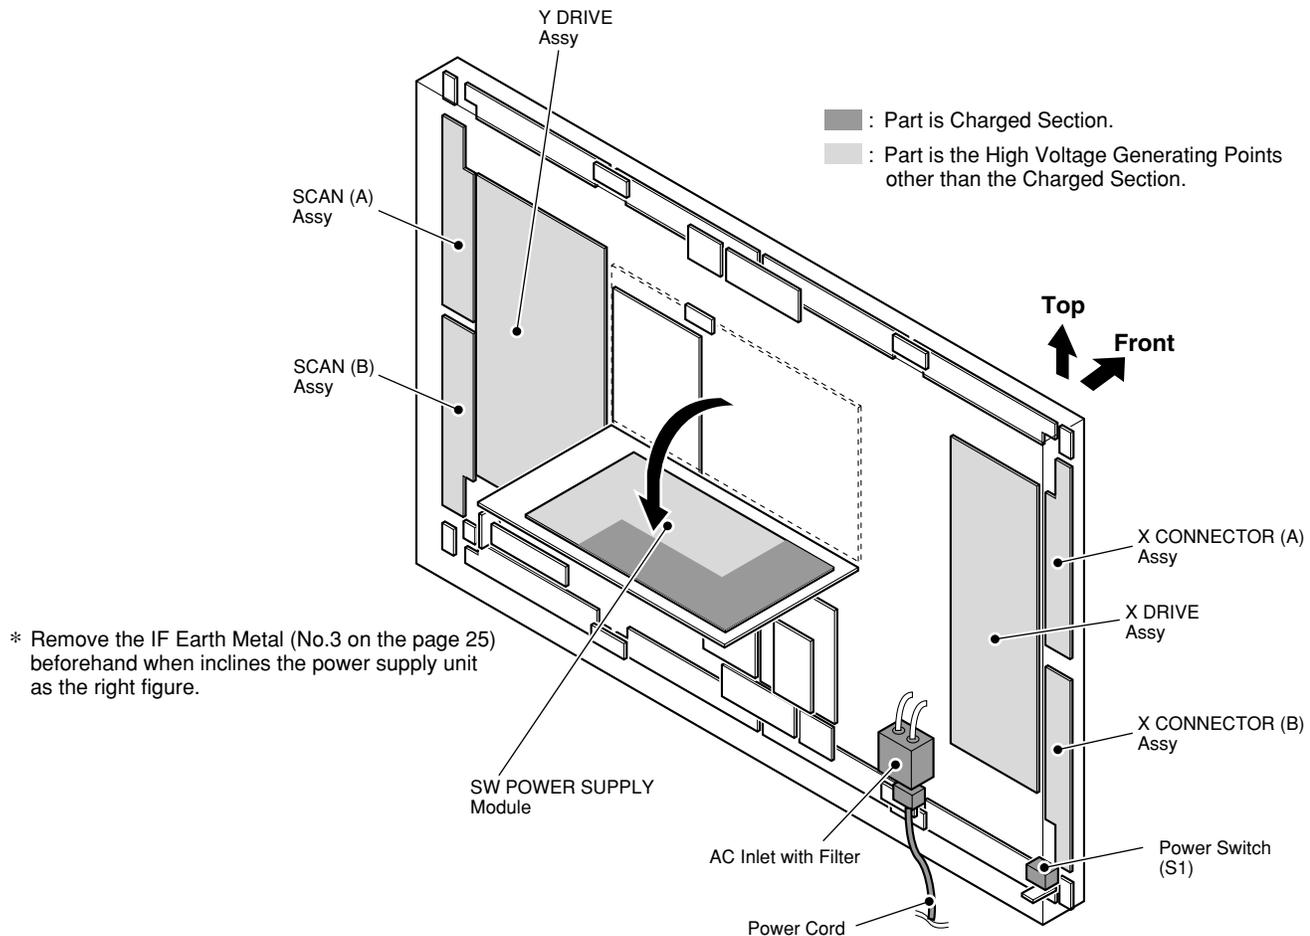

Fig.1 Charged Section and High Voltage Generating Point (Rear View)

[Important symbols for good services]

In this manual, the symbols shown-below indicate that adjustments, settings or cleaning should be made securely.
 When you find the procedures bearing any of the symbols, be sure to fulfill them:

1. Product safety

You should conform to the regulations governing the product (safety, radio and noise, and other regulations), and should keep the safety during servicing by following the safety instructions described in this manual.

2. Adjustments

To keep the original performances of the product, optimum adjustments or specification confirmation is indispensable. In accordance with the procedures or instructions described in this manual, adjustments should be performed.

3. Cleaning

For optical pickups, tape-deck heads, lenses and mirrors used in projection monitors, and other parts requiring cleaning, proper cleaning should be performed to restore their performances.

4. Shipping mode and shipping screws

To protect the product from damages or failures that may be caused during transit, the shipping mode should be set or the shipping screws should be installed before shipping out in accordance with this manual, if necessary.

5. Lubricants, glues, and replacement parts

Appropriately applying grease or glue can maintain the product performances. But improper lubrication or applying glue may lead to failures or troubles in the product. By following the instructions in this manual, be sure to apply the prescribed grease or glue to proper portions by the appropriate amount. For replacement parts or tools, the prescribed ones should be used.

2. EXPLODED VIEWS AND PARTS LIST

NOTES: ● Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.

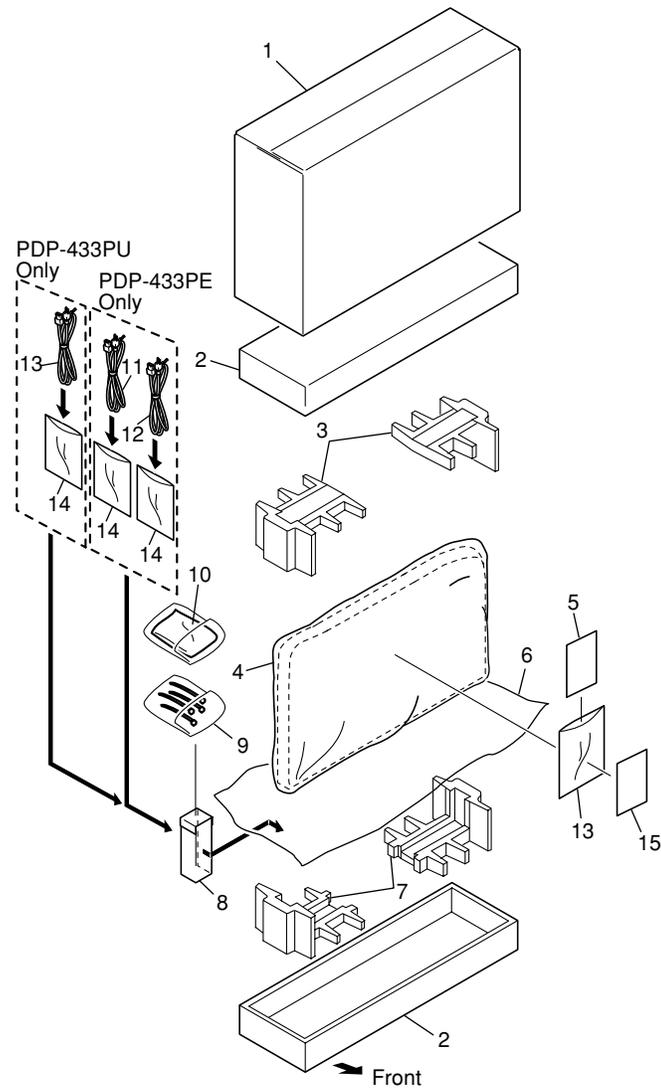

● The Δ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.

● Screws adjacent to ∇ mark on the product are used for disassembly.

● For the applying amount of lubricants or glue, follow the instructions in this manual.

(In the case of no amount instructions, apply as you think it appropriate.)

■ Caution in Replacement of Chassis Block

www.DataSheet4U.com

Please order the PDP Service Assy 433 (AWU1043) when replacing the Chassis block.
PDP Service Assy 433 is all common use parts of for business, public use and module.
Supply it by the state that installed Circuit Board Spacer (AEC1872) and Wire Saddle (AEC1904) as follows.
Therefore need to remove it in accordance with model.

Confirm character carved a seal near the parts, and remove it.

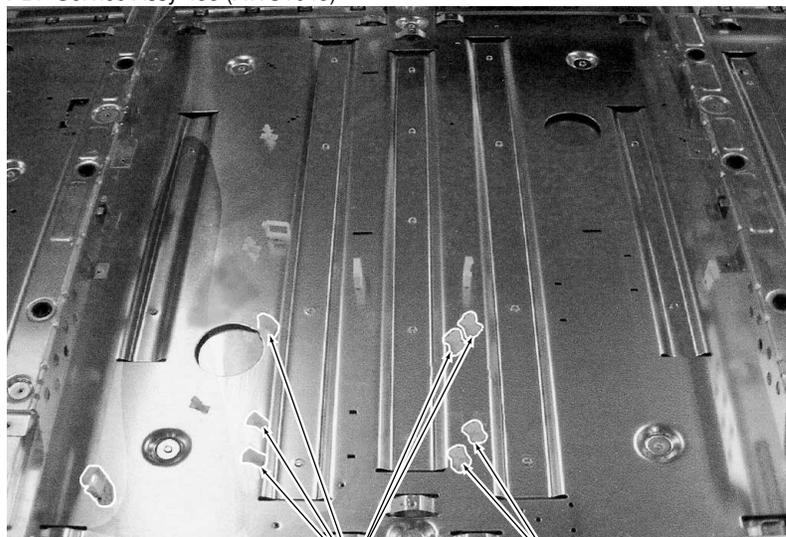

P : Public exclusive use

W : Module exclusive use

PW : Common use of public use and module

* In case of this unit, the parts that "W" is marked removes.

Measurement condition

Video Input Signal : FULL FIELD COLOR-BAR
 Audio Input Signal : 1kHz Sine Wave 0.2Vrms
 Volume : 60 (MAX)
 AV Selection : STANDARD
 SRS : OFF
 FOCUS : OFF

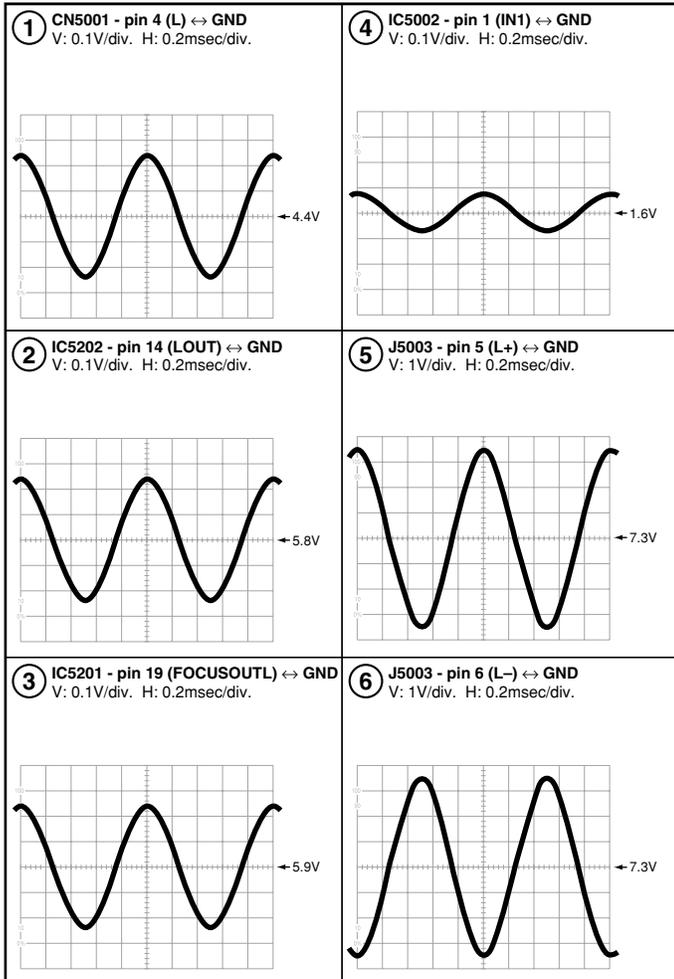

Caution in the measurement

Audio Power Amp. (IC5002: LA4628) on the AUDIO AMP Assy is BTL system, and, as for the power amplifier and the speaker output, \pm poles becomes hot for the ground. Therefore be careful not to connect the measuring instrument as the following figures. (Power amplifier may be damaged.)

ch 2 : K2220 (Y.PSUS) - K2219 (SUSGND)
V: 50V/div. H: 2μsec/div.

● Sustain Waveform (reset pulse)

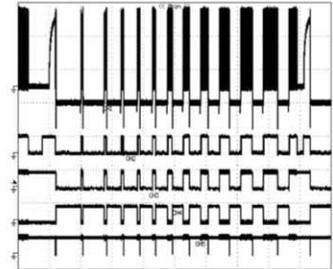

ch 1 : K3107 (X.PSUS) - K3201 (SUSGND)
V: 100V/div. H: 5μsec/div.
ch 2 : K2220 (Y.PSUS) - K2219 (SUSGND)
V: 100V/div. H: 5μsec/div.

Drive Pulse Waveforms

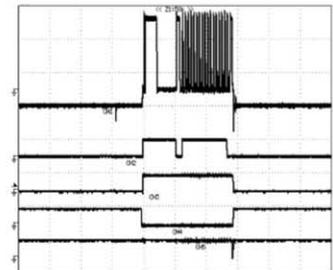

● Y Drive Pulse Control Waveform (1 field)

ch 1 : K2220 (Y.PSUS) - K2219 (SUSGND)
V: 100V/div. H: 2msec/div.
ch 2 : K2039 (YCP_MSK) - K2024 (DGND)
V: 10V/div. H: 2msec/div.
ch 3 : K2040 (YSUS_MSK) - K2024 (DGND)
V: 10V/div. H: 2msec/div.
ch 4 : K2041 (OFS) - K2024 (DGND)
V: 10V/div. H: 2msec/div.
ch 5 : K2053 (SOFT_D) - K2024 (DGND)
V: 10V/div. H: 2msec/div.

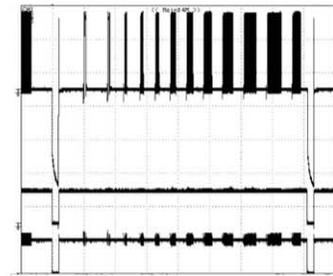

● Y Drive Pulse Control Waveform (1 sub-field)

ch 1 : K2220 (Y.PSUS) - K2219 (SUSGND)
V: 100V/div. H: 50μsec/div.
ch 2 : K2039 (YCP_MSK) - K2024 (DGND)
V: 10V/div. H: 50μsec/div.
ch 3 : K2040 (YSUS_MSK) - K2024 (DGND)
V: 10V/div. H: 50μsec/div.
ch 4 : K2041 (OFS) - K2024 (DGND)
V: 10V/div. H: 50μsec/div.
ch 5 : K2053 (SOFT_D) - K2024 (DGND)
V: 10V/div. H: 50μsec/div.

● X Drive Pulse Control Waveform (1 field)

ch 1 : K3107 (X.PSUS) - K3201 (SUSGND)
V: 100V/div. H: 2msec/div.
ch 2 : K3017 (XCP_MSK) - K3005 (DGND)
V: 10V/div. H: 2msec/div.
ch 3 : K3015 (XSUS_MSK) - K3005 (DGND)
V: 5V/div. H: 2msec/div.

5. PCB PARTS LIST

NOTES: ●Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.

●The Δ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.

●When ordering resistors, first convert resistance values into code form as shown in the following examples.

Ex.1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J=5%, and K=10%).

560 Ω → 56 × 10¹ → 561 RD1/4PU 5 6 1 J
 47k Ω → 47 × 10³ → 473 RD1/4PU 4 7 3 J
 0.5 Ω → R50 RN2H R 5 0 K
 1 Ω → 1R0 RS1P 1 R 0 K

Ex.2 When there are 3 effective digits (such as in high precision metal film resistors).

5.62k Ω → 562 × 10¹ → 5621 RN1/4PC 5 6 2 1 F

6. ADJUSTMENT

6.1 SERVICE FACTORY MODE

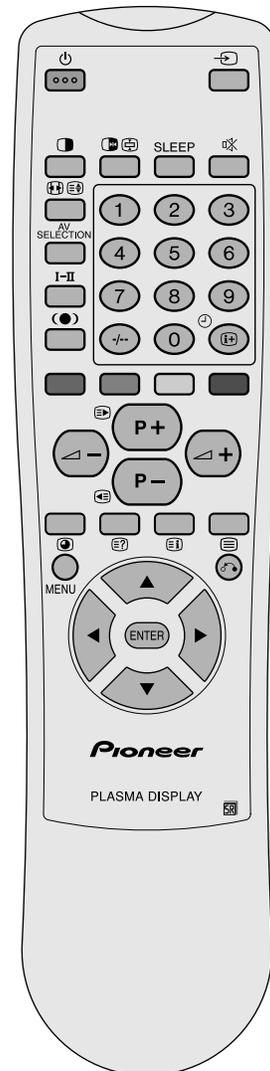

Service factory mode uses an OSD function of the Media Receiver (PDP-R03E or PDP-R03U).
Perform the adjustment and setting in the state that this unit and Media Receiver are connected by the system.
Plasma display cannot use a factory mode by being simple.

■ Remote Control Unit Operation in The Service Factory Mode

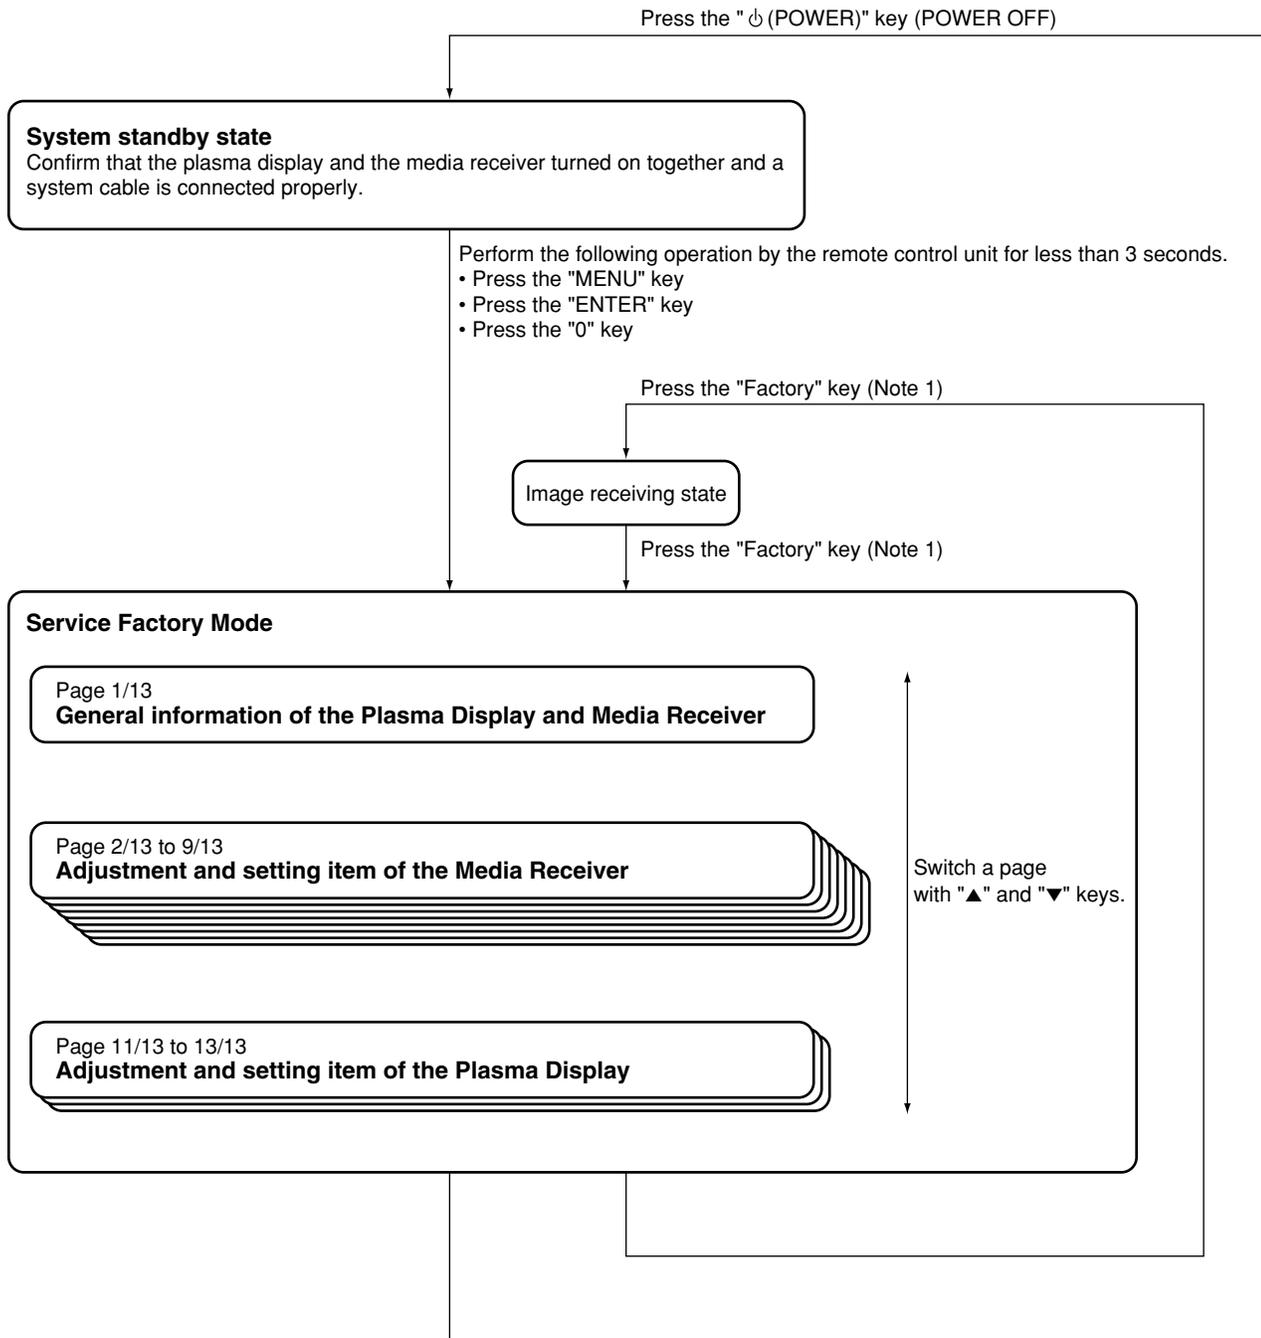

Operate the service factory mode with the remote control unit (AXD1463 or AXD1460) of accessory of the media receiver.
Please perform the adjustment by operating the following keys.

| Remote Control Key | Function |
|---------------------------|--|
| P + key | One line moves the selection cursor of the adjustment item up. |
| P - key | One line moves the selection cursor of the adjustment item down. |
| VOL \triangleleft + key | +1 raises a adjustment value |
| VOL \triangleleft - key | -1 reduces a adjustment value |
| \blacktriangle key | Perform page down (previous page) |
| \blacktriangledown key | Perform page up (next page) |
| \blacktriangleleft key | -10 reduces a adjustment value |
| \blacktriangleright key | +10 raises a adjustment value |

6.1.1 How to Enter the Service Factory Mode

www.DataSheet4U.com

Note 1: When use the adjustment exclusive use remote control unit with a [AA5F] code.

* : Be careful so that there is the case that page constitution is different.

| 16 | | | |
| 17 | | | |
| 18 | | | |

| No. | Item | Adjustable Range | Shipping Setting | Storage Place |
|-----|---------------------------------------|------------------|--------------------------|---------------|
| 1 | PDP_W/B table selection at VIDEO 50Hz | 1 or 2 | 2 | PDP |
| 2 | PDP_W/B table selection at VIDEO 60Hz | 1 or 2 | 1 | PDP |
| 3 | PDP_W/B table selection at PC | 1 or 2 | 1 | PDP |
| 4 | RED_GAIN of PDP_W/B table 1 | 0 to 255 | Factory adjustment value | PDP |
| 5 | GREEN_GAIN of PDP_W/B table 1 | 0 to 255 | Factory adjustment value | PDP |
| 6 | BLUE_GAIN of PDP_W/B table 1 | 0 to 255 | Factory adjustment value | PDP |
| 7 | RED_OFS of PDP_W/B table 1 | 0 to 999 | Factory adjustment value | PDP |
| 8 | GREEN_OFS of PDP_W/B table 1 | 0 to 999 | Factory adjustment value | PDP |
| 9 | BLUE_OFS of PDP_W/B table 1 | 0 to 999 | Factory adjustment value | PDP |
| 10 | RED_GAIN of PDP_W/B table 2 | 0 to 255 | Factory adjustment value | PDP |
| 11 | GREEN_GAIN of PDP_W/B table 2 | 0 to 255 | Factory adjustment value | PDP |
| 12 | BLUE_GAIN of PDP_W/B table 2 | 0 to 255 | Factory adjustment value | PDP |
| 13 | RED_OFS of PDP_W/B table 2 | 0 to 999 | Factory adjustment value | PDP |
| 14 | GREEN_OFS of PDP_W/B table 2 | 0 to 999 | Factory adjustment value | PDP |
| 15 | BLUE_OFS of PDP_W/B table 2 | 0 to 999 | Factory adjustment value | PDP |

Caution in the PDP W/B (No.4 to 15) adjustment:

Adjustment value is reflected without relation in input signal during adjustment to the actual PDP.

For example, when operate a adjustment value of [MNTR HIGH1] during PAL input, switch to the adjustment value operation of W/B table 1 while displaying PAL in the actual PDP.

This is temporary.

After adjustment, it becomes the W/B table 2 operation in the PAL input after restarted in the normal mode. It becomes an operation of the W/B table 1 adjustment value after adjustment in the NTSC input.

As for the above example, table selection (No. 1 and 2) becomes the shipping setting.

* : Be careful so that there is the case that page constitution is different.

| 7 | SUS_B timing setting of Y drive | 0 to 15 | Factory adjustment value | PDP |
| 8 | SUS_G timing setting of Y drive | 0 to 15 | Factory adjustment value | PDP |

Adjustment item of this page is related in damage of the set when mistakes adjustment. When adjustment is needed, be enough careful to adjustment.

Caution in the electric power setting (No. 1 and 2) adjustment:

Adjustment value is reflected without relation in input signal during adjustment to the actual PDP.

For example, when operate a adjustment value of [ABL VIDEO 60 PC] during PAL input, switch to the adjustment value operation of [ABL VIDEO 60 PC] while displaying PAL in the actual PDP. This is temporary.

After adjustment, it becomes the [ABL VIDEO 50] operation in the PAL input after restarted in the normal mode. It becomes an operation of the [ABL VIDEO 60PC] adjustment value after adjustment in the NTSC input.

* : Be careful so that there is the case that page constitution is different.

| No. | Item | Adjustable Range | Shipping Setting | Storage Place |
|-----|--|------------------|------------------|---------------|
| 1 | Drive mode selection at VIDEO | 0 to 5 | 0 | PDP |
| 2 | Drive mode selection at PC | 0 to 5 | 3 | PDP |
| 3 | Negative positive inversion mode | OFF/ON | OFF | PDP |
| 4 | Bright enhance | OFF/ON | OFF | None |
| 5 | Refresh rate at mask signal generation | 50/60/70 | - | None |
| 6 | Pattern mask signal generation | OFF/ | OFF | PDP |
| 7 | Full mask signal generation | OFF/ | OFF | PDP |

Caution in the mask (generation test signal screen in the PDP inside) signal generation:

- A pattern mask and a full mask can use only either.
Therefore, turn a full mask to OFF when uses a pattern mask. Also turn a pattern mask to OFF when uses a full mask.
- A pattern mask and a full mask are test signal screens occurring together in the PDP inside. Therefore, in the mask signal generation, it cannot confirm video inputting from OSD and the outside.
When release mask setting or change of each setting or perform the confirmation of the adjustment or external input signal, perform key operation of the main unit button or the remote control unit.
When operated something, stop the generation of the mask signal just after that for two seconds. Therefore, modification and adjustment of each setting and confirmation of the external input signal are possible.

* : Be careful so that there is the case that page constitution is different.

6.2 ADJUSTMENT REQUIRED WHEN THE SET IS REPAIRED OR REPLACED

www.DataSheet4U.com

■ SW POWER SUPPLY Module

● When replaced

No adjustment required.

■ DIGITAL VIDEO Assy

● When repaired

No adjustment required.

● When replaced

- Remove IC1204 (24LC04(1) SN-TBB) from the former PC Board to replace, and install it to the new PC Board.

■ MR INTERFACE Assy

1. Remove IC4201 from the former PC Board to replace, and install it to the new PC Board.
2. Set slide SW according to page 22.

■ Y DRIVE Assy

● When repaired

1. VOFS/VH/IC5V voltage adjustment
2. Timing adjustment of pulse module

● When replaced

1. SUSB ground timing adjustment
2. Panel white balance adjustment

■ X DRIVE Assy

● When repaired

1. VRN voltage adjustment
2. Timing adjustment of pulse module

● When replaced

1. SUSB ground timing adjustment
2. Panel white balance adjustment

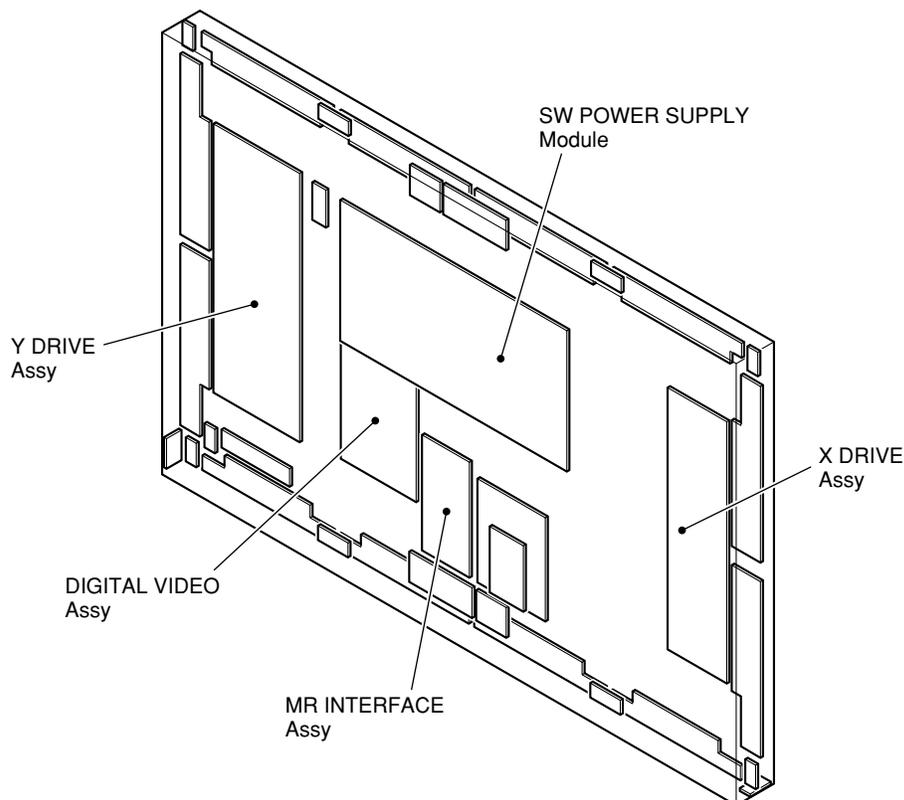

Fig. 1 PC Board Location (rear side view)

Set this adjustment value to center (128). Adjust VR2701 so that the voltage between K2701 (VOFS) and K2703 (SUS GND) becomes 45V. Return it to the value that wrote down a adjustment value of V-OFFSET in step 1. <p>Method 2</p> <ol style="list-style-type: none"> Read the adjustment value of VOFS ADJ in the factory mode. Adjust VR2701 so that the voltage between K2710 (VOFS) and K2703 (SUS GND) becomes following voltage $\pm 0.5V$. <table border="1"> <thead> <tr> <th>Input Command</th> <th>DAC Output</th> <th>Setting Voltage</th> <th>Input Command</th> <th>DAC Output</th> <th>Setting Voltage</th> </tr> </thead> <tbody> <tr><td>VOF000</td><td>0.4</td><td>25</td><td>VOF134</td><td>2.599212598</td><td>45.94488</td></tr> <tr><td>VOF006</td><td>0.4984375</td><td>25.9375</td><td>VOF141</td><td>2.71496063</td><td>47.04724</td></tr> <tr><td>VOF013</td><td>0.61328125</td><td>27.03125</td><td>VOF147</td><td>2.814173228</td><td>47.99213</td></tr> <tr><td>VOF019</td><td>0.71171875</td><td>27.96875</td><td>VOF153</td><td>2.913385827</td><td>48.93701</td></tr> <tr><td>VOF026</td><td>0.8265625</td><td>29.0625</td><td>VOF160</td><td>3.029133858</td><td>50.03937</td></tr> <tr><td>VOF032</td><td>0.925</td><td>30</td><td>VOF166</td><td>3.128346457</td><td>50.98425</td></tr> <tr><td>VOF038</td><td>1.0234375</td><td>30.9375</td><td>VOF172</td><td>3.227559055</td><td>51.92913</td></tr> <tr><td>VOF045</td><td>1.13828125</td><td>32.03125</td><td>VOF179</td><td>3.343307087</td><td>53.0315</td></tr> <tr><td>VOF051</td><td>1.23671875</td><td>32.96875</td><td>VOF185</td><td>3.442519685</td><td>53.97638</td></tr> <tr><td>VOF058</td><td>1.3515625</td><td>34.0625</td><td>VOF191</td><td>3.541732283</td><td>54.92126</td></tr> <tr><td>VOF064</td><td>1.45</td><td>35</td><td>VOF198</td><td>3.657480315</td><td>56.02362</td></tr> <tr><td>VOF070</td><td>1.5484375</td><td>35.9375</td><td>VOF204</td><td>3.756692913</td><td>56.9685</td></tr> <tr><td>VOF077</td><td>1.66328125</td><td>37.03125</td><td>VOF211</td><td>3.872440945</td><td>58.07087</td></tr> <tr><td>VOF083</td><td>1.76171875</td><td>37.96875</td><td>VOF217</td><td>3.971653543</td><td>59.01575</td></tr> <tr><td>VOF090</td><td>1.8765625</td><td>39.0625</td><td>VOF223</td><td>4.070866142</td><td>59.96063</td></tr> <tr><td>VOF096</td><td>1.975</td><td>40</td><td>VOF230</td><td>4.186614173</td><td>61.06299</td></tr> <tr><td>VOF102</td><td>2.0734375</td><td>40.9375</td><td>VOF236</td><td>4.285826772</td><td>62.00787</td></tr> <tr><td>VOF109</td><td>2.18828125</td><td>42.03125</td><td>VOF242</td><td>4.38503937</td><td>62.95276</td></tr> <tr><td>VOF115</td><td>2.28671875</td><td>42.96875</td><td>VOF249</td><td>4.500787402</td><td>64.05512</td></tr> <tr><td>VOF122</td><td>2.4015625</td><td>44.0625</td><td>VOF255</td><td>4.6</td><td>65</td></tr> <tr><td>VOF128</td><td>2.5</td><td>45</td><td></td><td></td><td></td></tr> </tbody> </table> <p>The symptom is case of mis-adjustment If the VOFS Voltage adjustment is not performed properly, dots like blinking luminance points appear. * When perform the various adjustment by RS-232C control, execute a "DM0" command (release the limit of pulse number) beforehand.
After the adjustment completion, execute a "DM 3" command (Limit of pulse number: 64%, shipping state) by all means.

■ Timing Adjustment of X and Y DRIVE Assys Control Signal

● Purpose

- Pulse module loads in DRIVE Assy as one of heat measures of DRIVE Assy. Adjust the drive timing of the pulse module driving parallel with VR.
- Pulse module has each peculiar delay time. Readjustment is necessary when replaced the pulse module in the X and Y DRIVE Assys.

● Adjustment Method

CR delay circuit is each inserted on signal path of four control signals (SUS-U, SUS-B, SUS-D, SUS-G) driving the pulse module.

Quantity of delay can adjust pulse module of one side with VR.

Adjust VR while measuring a waveform of the pulse module, and match a timing.

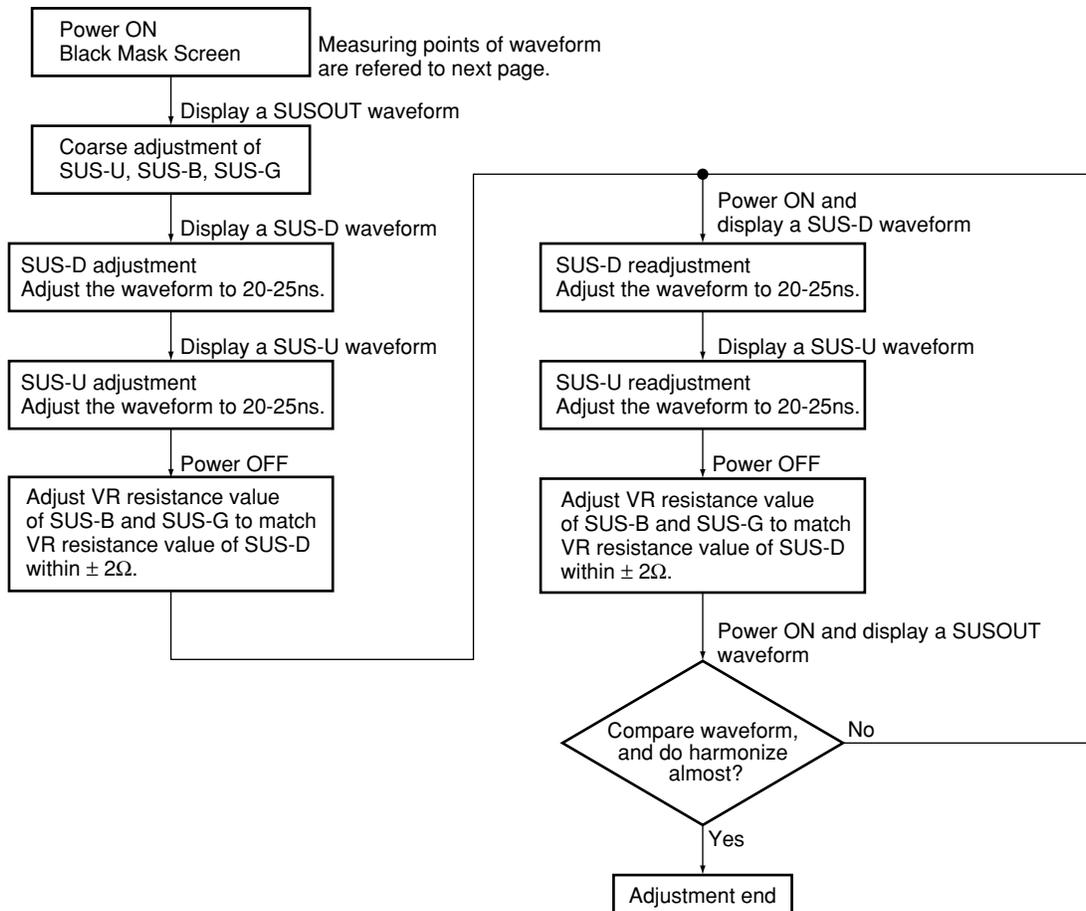

Adjustment VR

| | X DRIVE | Y DRIVE |
|-------|---------|---------|
| SUS-U | VR3203 | VR2204 |
| SUS-D | VR3202 | VR2203 |
| SUS-B | VR3201 | VR2202 |
| SUS-G | VR3200 | VR2201 |

Test pin for adjustment and measurement

| Pulse Module | X DRIVE | | Y DRIVE | |
|--------------|---------|-------|---------|-------|
| | Upper | Lower | Upper | Lower |
| SUSOUT | K3105 | K3106 | K2212 | K2203 |
| SUS-U | K3200 | K3204 | K2220 | K2224 |
| SUS-D | K3108 | K3205 | K2207 | K2225 |

● Adjustment Procedure

As for this adjustment, adjustment with set state is difficult. Therefore replace it every Assy when replacing the pulse module.

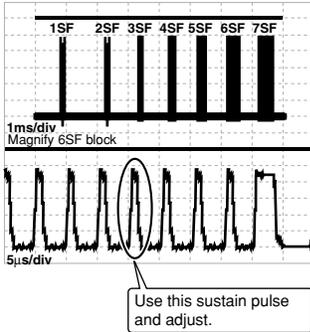

Measuring Waveform of Pulse Module Timing Adjustment

www.DataSheet4U.com

Timing adjustment of the pulse module control signal adjusts with the sustain pulse of eighth pulse (X DRIVE) and the ninth pulse (Y DRIVE) from the back of 6SF.

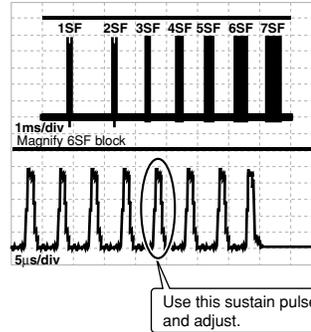

Measuring point of waveform

Y DRIVE SUSOUT waveform

CH1 : Y SUSOUT Under (K2203), 50V/div
 CH2 : Y SUSOUT Upper (K2212), 50V/div
 CH4 : YPR-U1 (K2038)- Trigger, 5V/div
 Trigger : 2msec delay

X DRIVE SUSOUT waveform

CH1 : X SUSOUT Under (K3106), 50V/div
 CH2 : X SUSOUT Upper (K3105), 50V/div
 CH4 : YPR-U1 (K2038)- Trigger, 5V/div
 Trigger : 2msec delay

- Perform adjustment of waveform with a black mask screen.
- It is easy to adjust when turned field AB offset to OFF (RS-232C command: OCN) in adjustment.

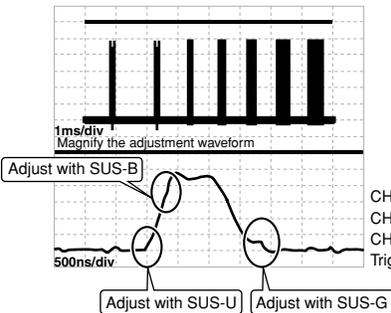

Note:

- Sampling rate of oscilloscope sets it more than 500MS/s in order to perform ns order adjustment.
- Collecting calibration of probe before adjustment by all means.
- Connect GND of probe measuring waveform to SUSGND terminal by all means.
- Precise waveform is not displayed, and an adjustment gap may occur that does not collect GND properly.

When took waveform be each drive Assy unit, measure it at the fourth sustain pulse from the back except for a large width sustain pulse. Therefore, when measured both waveform of the X and Y drives together, it becomes the sustain pulse of 8 and 9 pulses from the back.

Waveform coarse adjustment

Measure the SUSOUT waveform

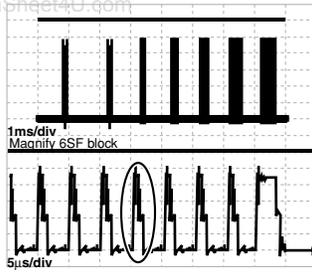

CH1 : Y SUSOUT Under (K2203), 50V/div
 CH2 : Y SUSOUT Upper (K2212), 50V/div
 CH4 : YPR-U1 (K2038)- Trigger, 5V/div
 Trigger : 2msec delay

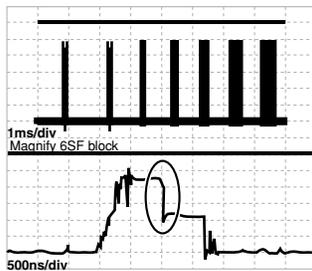

When there is a gap with waveform of CH1 / CH2 of the part which enclosed in the following circle, adjust required VR to overlap the waveform.

● SUS-D Adjustment (Y DRIVE)

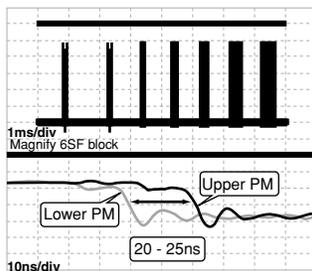

www.DataSheet4U.com

Magnification

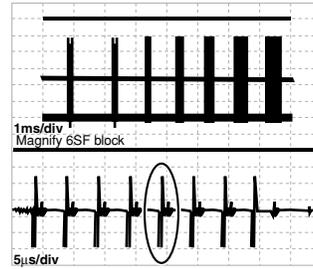

Magnification

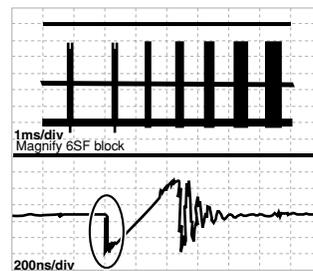

CH1 : Y SUS-D Under (K2225), 50V/div
 CH2 : Y SUS-D Upper (K2207), 50V/div
 CH4 : YPR-U1 (K2038)- Trigger, 5V/div
 Trigger : 2msec delay

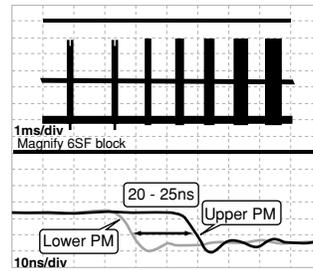

● SUS-U Adjustment (Y DRIVE)

Magnification

Magnification

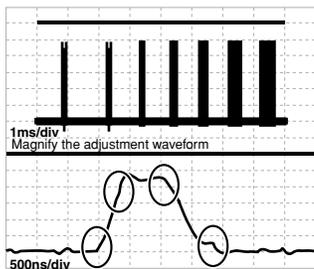

CH1 : Y SUS-U Under (K2224), 50V/div
 CH2 : Y SUS-U Upper (K2220), 50V/div
 CH4 : YPR-U1 (K2038)- Trigger, 5V/div
 Trigger : 2msec delay

Caution:
 Not absolutely mistaking upper and lower of waveform.

● Waveform Confirmation in Adjustment completion

Measure the SUSOUT waveform

CH1 : Y SUSOUT Under (K2203), 50V/div
 CH2 : Y SUSOUT Upper (K2212), 50V/div
 CH4 : YPR-U1 (K2038)- Trigger, 5V/div
 Trigger : 2msec delay

Confirm it to waveform of CH1 / CH2 of the part which enclosed in the following circle whether there is not a large gap. (A gap of the quantity that shifts 20nS and adjusted remains.)

When adjust in the power supply ON state, change so that the quantity of gap that adjusted by temperature-rise of the pulse module becomes small. Therefore, perform high power OFF (RS-232C command: DRF) except measurement time of waveform when adjusts, and adjustment error by temperature-rise does not occur.

■ SUS-B Ground Timing Adjustment

It is necessary to readjust this adjustment when replaced the X or Y DRIVE Assy and the pulse module.

● Measurement point and method

Measurement point of waveform of X and Y DRIVE Assy in timing adjustment is test pin of SUSOUT of the pulse module of bottom of the main unit.

X DRIVE Assy : K3106 Y DRIVE Assy : K2203

Measurement screen : Black mask (PC 60Hz)

The measurement is easy to perform when turns field AB alternation to OFF. (RS-232C command: OCN)

Measure a sustain pulse of the fifth pulse (X DRIVE) and the fifth pulse (Y DRIVE) from the back of the fourth FS, and adjust. In the start section of this sustain pulse, waveform has inflection point with the timing when SUS-B becomes ON. Adjust so that the voltage of this inflection point is the nearest to 140V and do not become less than 140V.

Adjustment parameter

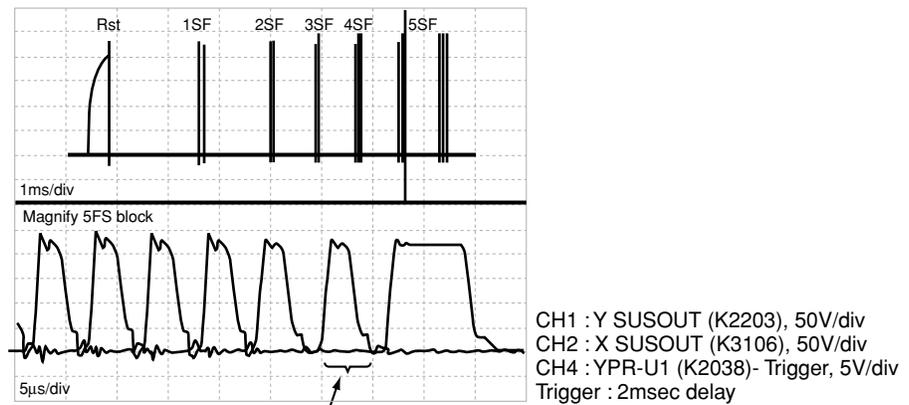

X DRIVE: XSUSB (RS-232C command : XSB)

Y DRIVE: YSUSB (RS-232C command : YSB)

Note:

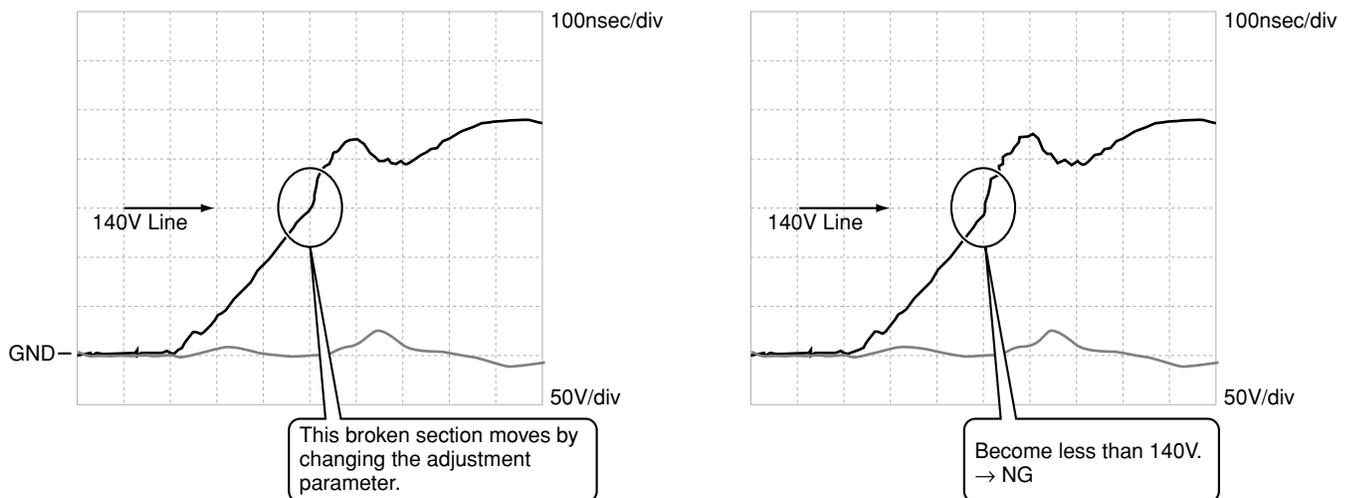

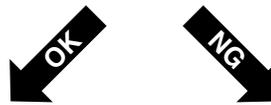

- Connect GND of probe measuring waveform to SUSGND terminal by all means.
- Precise waveform is not displayed, and an adjustment gap may occur that does not collect GND properly.

● Waveform in the measurement

Measure a waveform of this section and adjust.

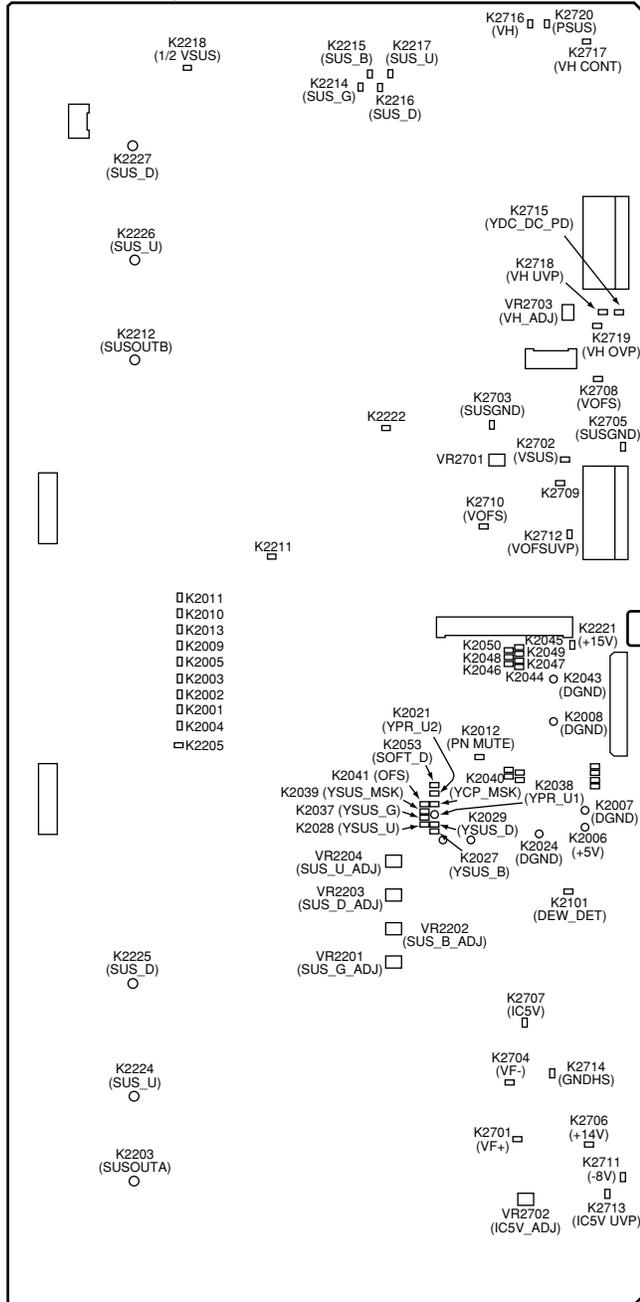

Magnify the fourth pulse sustain pulse (XSUSOUT waveform) from the back of the above waveform.

Adjusting Points

6.4 COMMAND

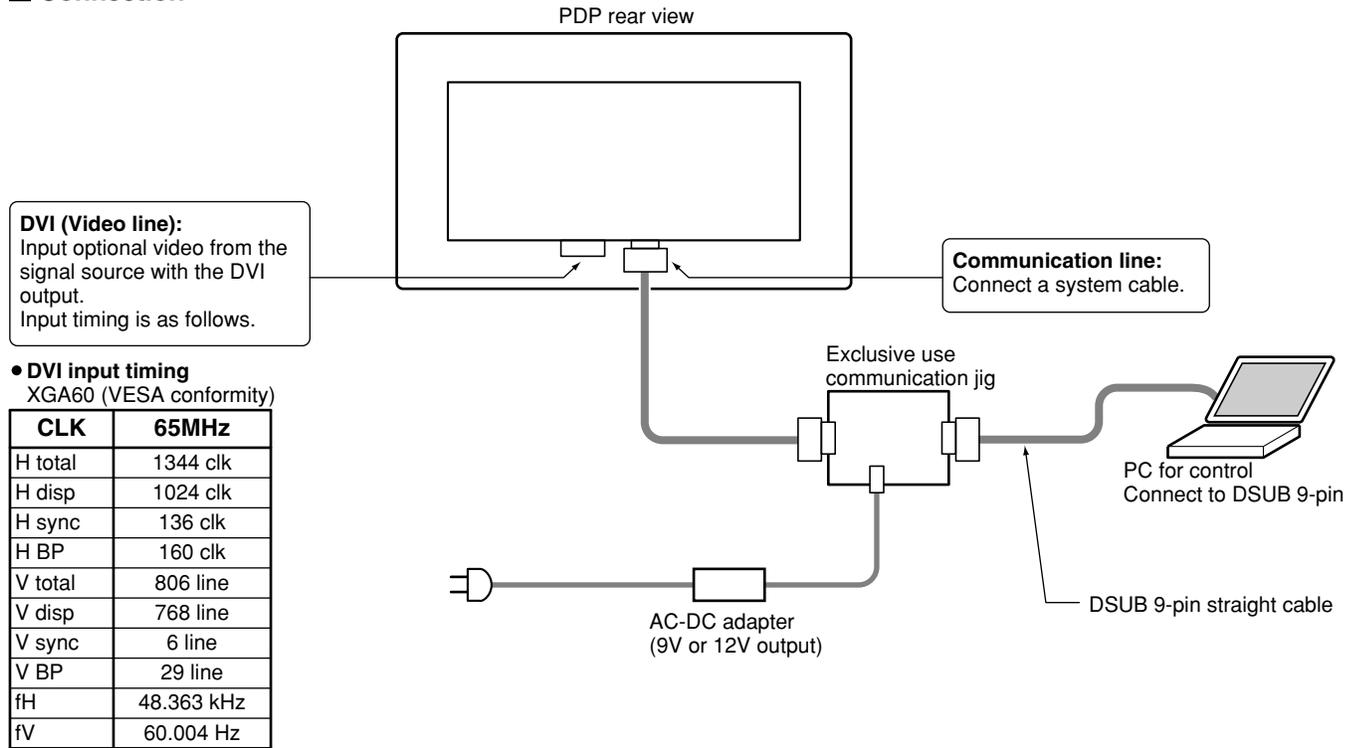

www.DataSheet4U.com

6.4.1 RS-232C Command

As for PDP-433P system, the 232C control of the panel control item is possible by a single state. However, the following exclusive use communication jig is necessary.

* Be careful so that can not use a DSUB 9-pin in the rear panel of the media receiver.

■ Connection

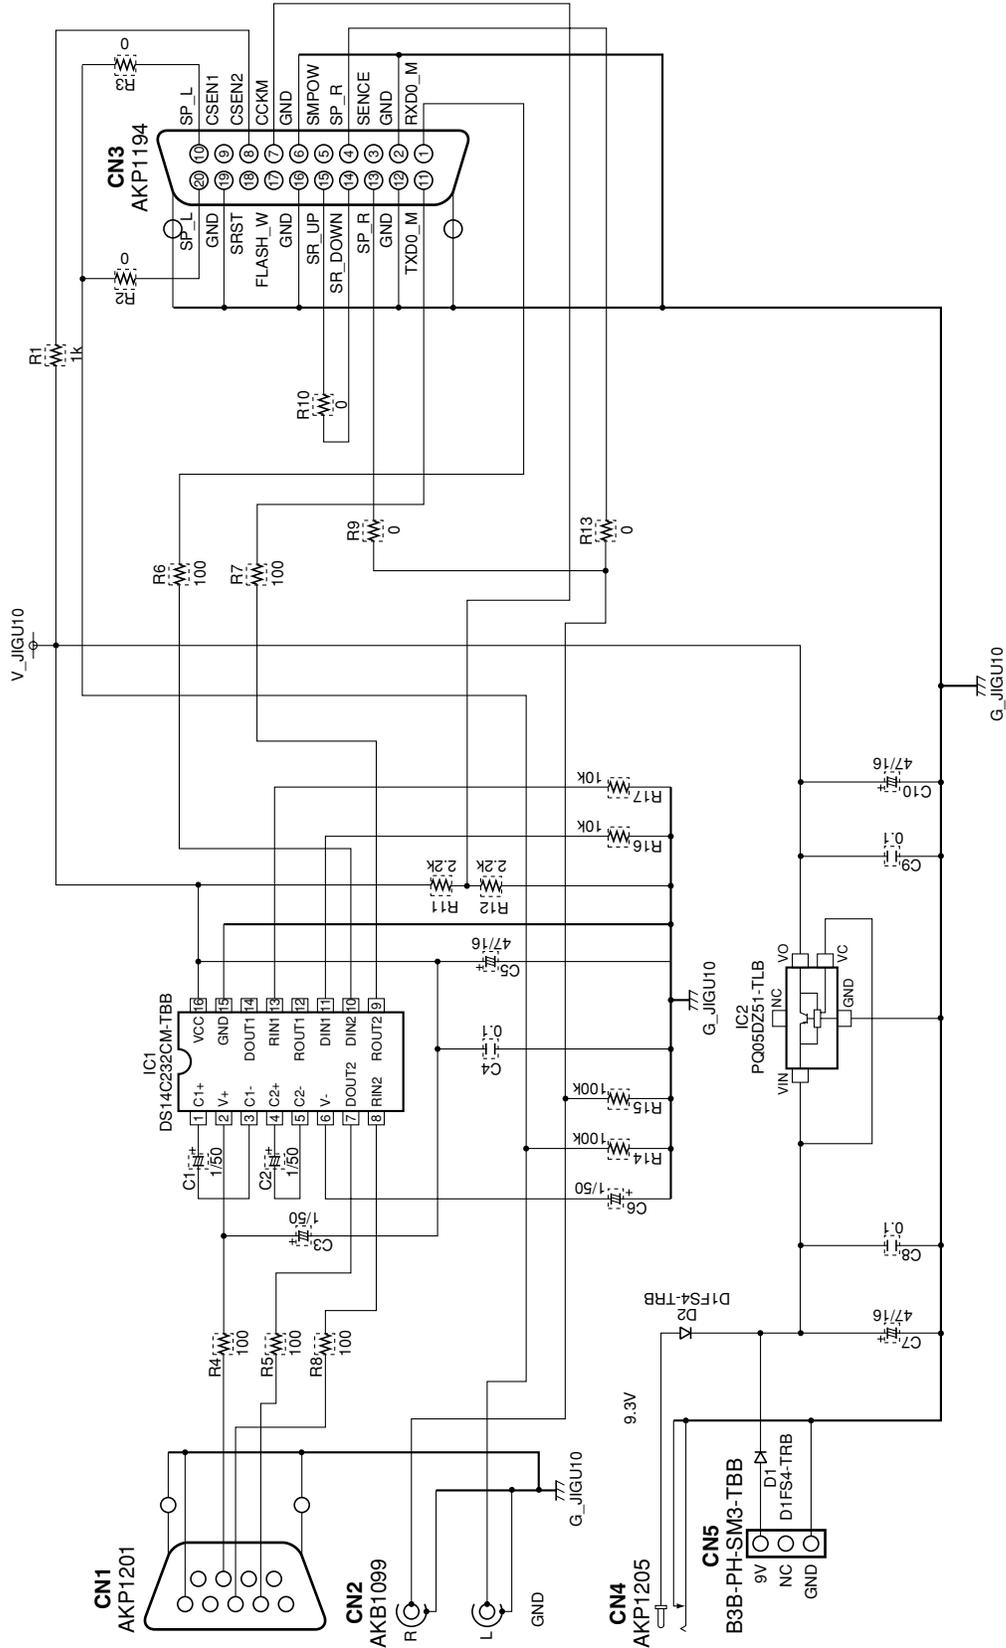

■ Communication baudrate

38400 bps is fixed.

Jig Schematic Diagram

6.4.2 GET Command

www.DataSheet4U.com

● Command Description

| Command | Function |
|---------|--|
| GAJ | Output data of an electronic VR adjustment value and a drive system adjustment value |
| GPW | Output data to be related to white balance adjustment of the panel |
| GS1 | Output data such as version information, hour meter and pulse meter |

GAJ: Output data of an electron VR adjustment value and a drive system adjustment value

• Output it according to transmission order and size of the table below.

| Order | Data Contents | Size | Remarks |
|-------|--|------------------|------------------|
| 1 | Setting mode of electric power upper limit value | 3 byte | AB* (*: 0 to 3) |
| 2 | Electric power upper limit value (ABL) | (Reference data) | 3 byte |
| 3 | | (Offset data) | 3 byte |
| 4 | Vsus adjustment value | (Reference data) | 3 byte |
| 5 | Vofs adjustment value | (Reference data) | 3 byte |
| 6 | V-SUS-B adjustment value | (Reference data) | 3 byte |
| 7 | V-SUS-G adjustment value | (Reference data) | 3 byte |
| 8 | Y-SUS-B adjustment value | (Reference data) | 3 byte |
| 9 | Y-SUS-G adjustment value | (Reference data) | 3 byte |

(Note 1) : When performed in reference mode selection, offset data outputs the same value as the reference data.

(Note 2) : Checksum of 2 bytes is added at the end, but ignore it.

GPW (Get Panel White balance): Output data to be related to white balance adjustment of panel

• Output it according to transmission order and size of the table below.

| Order | Data Contents | Size | Remarks |
|-------|--------------------------------------|------------------|------------------|
| 1 | Panel color temperature mode | 3 byte | PT* (*: 0 to 3) |
| 2 | Gain of W/B adjustment value Red | (Reference data) | 3 byte |
| 3 | | (Offset data) | 3 byte |
| 4 | Gain of W/B adjustment value Green | (Reference data) | 3 byte |
| 5 | | (Offset data) | 3 byte |
| 6 | Gain of W/B adjustment value Blue | (Reference data) | 3 byte |
| 7 | | (Offset data) | 3 byte |
| 8 | Offset of W/B adjustment value Red | (Reference data) | 3 byte |
| 9 | | (Offset data) | 3 byte |
| 10 | Offset of W/B adjustment value Green | (Reference data) | 3 byte |
| 11 | | (Offset data) | 3 byte |
| 12 | Offset of W/B adjustment value Blue | (Reference data) | 3 byte |
| 13 | | (Offset data) | 3 byte |

(Note 1) : When performed in reference mode selection, offset data outputs the same value as the reference data.

(Note 2) : Checksum of 2 bytes is added at the end, but ignore it.

PDP-433PE, PDP-433PU

www.DataSheet4U.com

GS1: Output data such as version information, hour meter and pulse meter

• Output it according to transmission order and size of the table below.

| Order | Data Contents | Size | Remarks |
|-------|-----------------------------------|--------|--------------------------|
| 1 | Display information | 3 byte | See below |
| 2 | Module microcomputer model number | 4 byte | 5691 or F691 |
| 3 | Module microcomputer version | 3 byte | |
| 4 | Panel microcomputer version | 3 byte | |
| 5 | Panel /FLASH ROM version | 3 byte | |
| 6 | Hour meter (hour) | 5 byte | Unit: H (time) |
| 7 | Pulse meter | 7 byte | Unit: 0.01G (10,000,000) |
| 8 | Main microcomputer model number | 4 byte | 5692 or F692 |
| 9 | Main microcomputer version | 3 byte | |
| 10 | Wide microcomputer version | 3 byte | |
| 11 | Wide /FLASH ROM version | 3 byte | |

(Note) : Checksum of 2 bytes is added at the end, but ignore it.

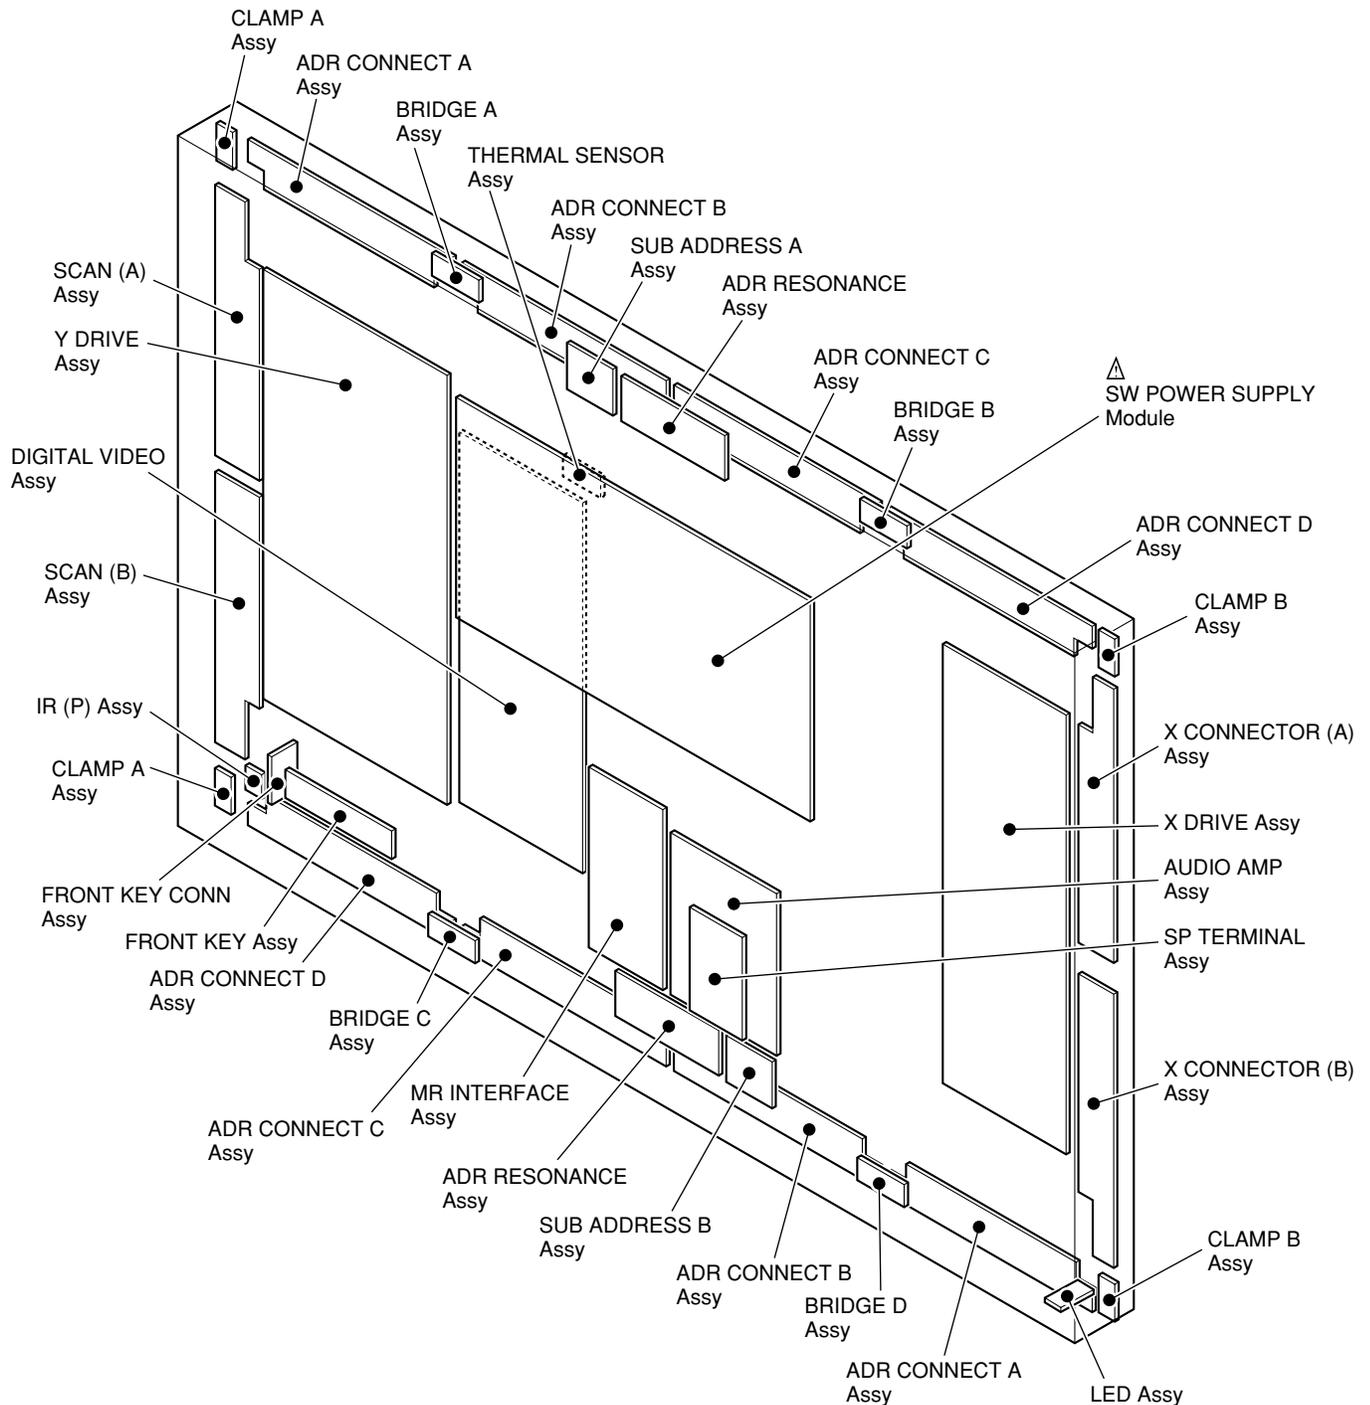

■ Display Information

| Data | Model |
|------|---------------------------|
| MX5 | PDP-503MX (initial value) |
| MX4 | PDP-433MX |
| MD5 | Module 50 inches |
| MD4 | Module 43 inches |
| HD5 | PDP-503HD |
| HD4 | PDP-433HD |

7. GENERAL INFORMATION

7.1 DIAGNOSIS

7.1.1 PCB LOCATION

● Rear View

7.1.2 SHUT DOWN/POWER DOWN DIAGNOSIS BY LED DISPLAY

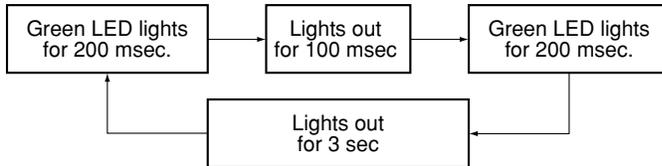

When internal circuit abnormality and other operation abnormality occurred from this unit, self-diagnose display function by STANDBY/ON (LED) indicator is loaded.

Each NG point by LED blinking and a PD (power down) point are as follows.

● Shut Down

- Operations : When a microcomputer detected abnormality, turn the power supply to OFF.
- LED display : Green blinks

Examples: LED blinks in the DIGITAL-IIC communication NG

| Number of blinks | Name |
|------------------|------------------------------|
| 1 | Panel Microcomputer NG |
| 2 | DIGITAL-IIC communication NG |
| 3 | Dewdrop abnormality |
| 4 | Temperature abnormality |

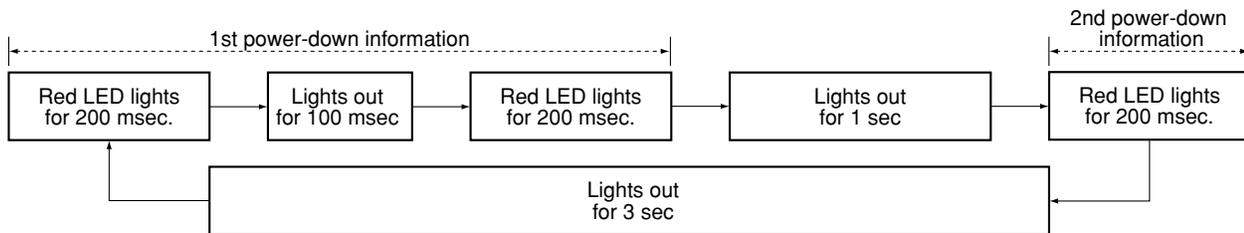

How to release the shut down state

When turn the power supply ON by remote control units, release from the shut down state, and turn the power supply ON.
(It is not necessary to turn the AC power OFF.)

● Power Down

- Operations : When this unit becomes the dangerous state, turn the power supply OFF with the protection circuit.
- LED display : Red blinks
- * When protection circuit more than two places almost worked simultaneously, display LED in order to 1st - 2nd.

Examples: LED blinks in the 1st power down = Y-DC/DC CONVERTER, 2nd power down = Y-DRIVE

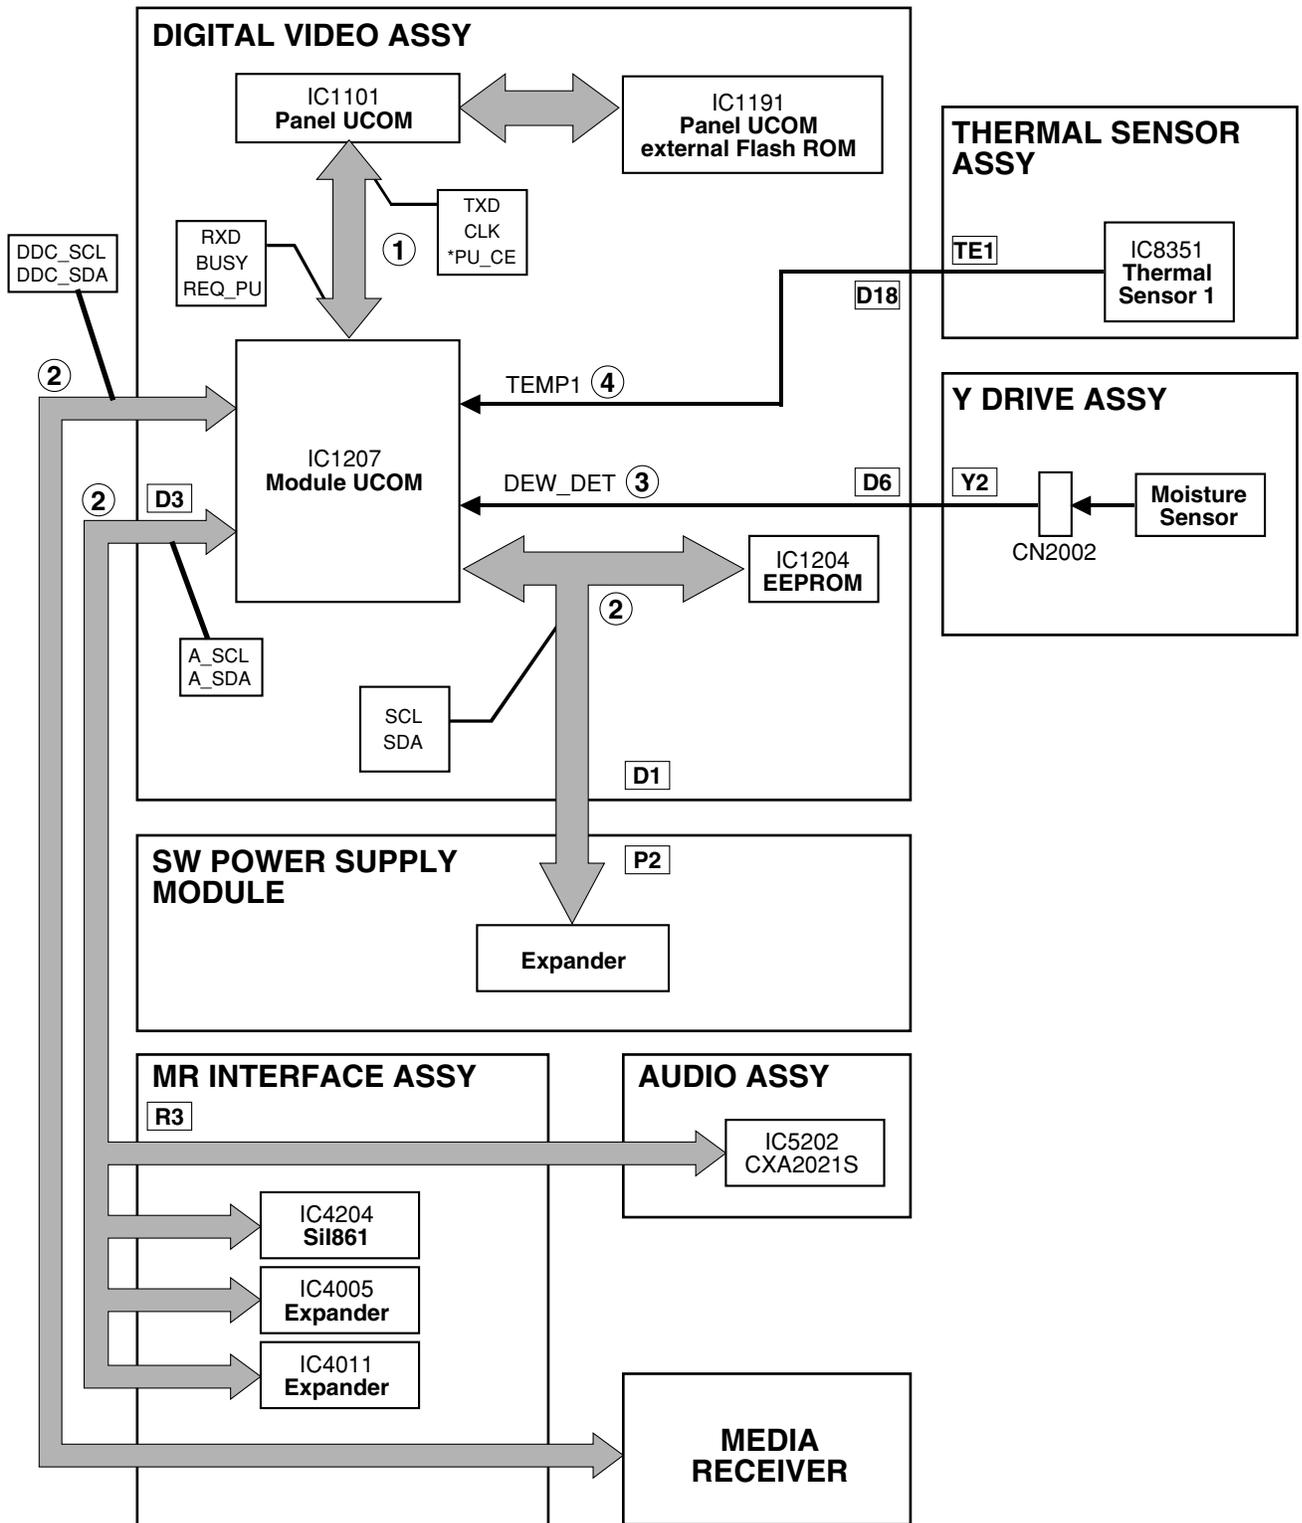

| Number of blinks | Name |
|------------------|-------------------------|
| 1 | Y-DRIVE |
| 2 | Y-DC/DC CONVERTER |
| 3 | X-DC/DC CONVERTER |
| 4 | X-DRIVE |
| 5 | Power supply |
| 6 | Address junction |
| 7 | Address resonance |
| 8 | DIGITAL-DC/DC CONVERTER |

How to release the power down state

AC power OFF
 ↓
 Wait for PD LED in the power supply module disappearing (for around 30 seconds).
 ↓
 Afterwards, wait moreover for five seconds.
 ↓
 Return by AC power ON.
 * After power down release, this unit rises up in the standby state.

● Block Diagram of Shut Down Signal System

Note: ① - ④ show LED flashing number of times when shut down occurred in this route.

● Shut down diagnosis

www.DataSheet4U.com

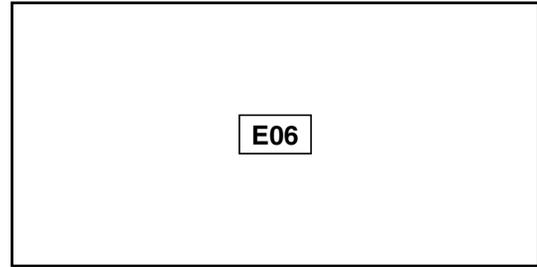

① Panel microcomputer NG

When a module microcomputer failed in communication with a panel microcomputer, this NG occurs.

Shut down after OSD display for 30 seconds from the NG detection.

Abnormality to expect

Open / Short of communication line in the Assy

② DIGITAL-IIC communication NG

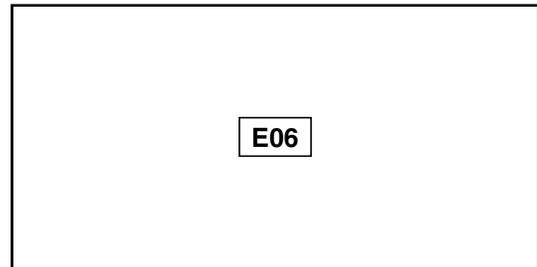

When a module microcomputer failed in communication with outside EEPROM or EXPANDER, this NG occurs.

Shut down after OSD display for 30 seconds from the NG detection.

* However, this communication NG may occur in the standby state.

Abnormality to expect

- Open / Short of communication line in the DIGITAL VIDEO, MR INTERFACE and AUDIO Assys
- Breaking of wire of the following points is thought about.
DIGITAL VIDEO Assy (D1) ↔ SW POWER SUPPLY Module (P2)
DIGITAL VIDEO Assy (D3) ↔ MR INTERFACE Assy (R3)
MR INTERFACE Assy (R23) ↔ AUDIO Assy (A24)
System Cable

③ Dew drop detection

When it becomes the dew drop state in this unit, this NG occurs.

After the dew drop detection, shut down immediately.

Abnormality to expect for dew drop

Disconnect a connector CN2002 between Dew drop sensor and Y DRIVE Assy.

④ Temperature abnormality

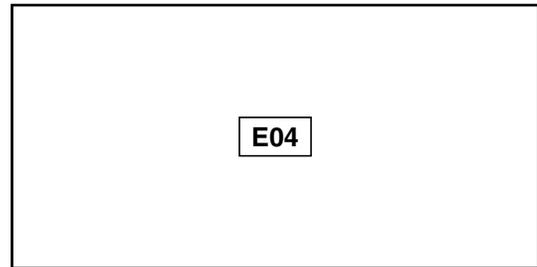

When temperature of this unit became abnormally high, this NG occurs.

Shut down after OSD display from the NG detection for 30 seconds.

Note: When temperature fell down during indication, return to the normal operation.

Abnormality to expect when it occurs in the environment that is not high-temperature

- Disconnect a connector between DIGITAL VIDEO Assy (D18) and temperature sensor 1 (TE1).

Note: About PS PD
 The condition that Red LED blinks five times (power supply PD)
 1 When the internal protection circuit of SW POWER SUPPLY Module worked
 2 When a microcomputer was not able to identify the PD point
 ↓
 Being careful because the protection circuit of SW POWER SUPPLY Module cannot conclude that worked.

● Block diagram for Power supply section

www.DataSheet4U.com

● Supplementary information

1. Power on/off switch for the large-signal system (SW102)

Function: Only the power for the small-signal system (15V, 12V, 6.5V, 13.5V, and -9V) is on, and the power for the large-signal system (VSUS, VADR) is off.

Usage: Use when only an operational check for the small-signal system is required.

Supplementary information:

When this switch is to be used, the wires of pin 5 (DIG, ADR, and PD) of the P2 connector of the power-supply module should be disconnected to prevent the PD circuit from operating. To turn the power of the large-signal system off without using this switch, operation from an external PC through RS-232C commands "DRF" is basically required. In this case, the above procedure is not required, as the PD circuit is muted by software.

Method of power supply ON in the large signal system OFF state with RS-232C command

- ① Confirm that this unit is the standby state.
- ② Transmit RS-232C command "DRF."
- ③ Turn the power supply ON by remote control unit, side key or command "PON."

* When turn the power supply OFF once, return to setting of large signal system ON.

When turn the power supply ON in the large signal system OFF, transmit "DRF" command each time.

2. 200V AC power-down switch (SW101)

Function: While 200V AC voltage is applied, operation of the PD circuit is turned on and off (ON when the switch is set to 100V AC, and OFF when the switch is set to 200V AC).

Setting: For the PU model only, the switch is set to 100V, and for other models, it is set to 200V.

3. Temperature compensation of the VSUS voltage for the drive system

Function: Control the power supply voltage mentioned above according to temperature. (Temperature compensation works so that the voltage is lowered on the lower-temperature side, and is raised on the higher-temperature side.)

Purpose: To improve the yield by compensating the temperature characteristics of the panel.

Supplementary information:

For this model, temperature compensation is performed only for the VSUS voltage, and not for the VOFS voltage, and it is controlled by software.

4. When a fuse blows

- If a fuse blows, never turn the power on again only after replacing the fuse. (In most cases, the fuse itself did not have any problem. So as long as factors of overcurrent have not been removed, chances of destruction increase every time the power is turned on. In the worst case, about a dozen parts may be destroyed.)
- Principally, the whole power-supply module must be replaced.

5. Voltage adjustment of the panel drive

As this model employs the electronic VR system for the VSUS and VOFS voltages, and as the voltage-adjustment data are stored in the DIGITAL assembly, voltage adjustment of the panel drive is not necessary when the power-supply modules are changed. (For VADR, VH, and VRN, adjustments with semifixed VR controls are necessary.)

For this model, as the power-supply block has been developed and designed by an outside vendor, at the point you know which module is a cause of failure (through diagnosis described elsewhere in this manual), change the corresponding modules, and do not diagnose or repair the module.

Similarly, the switches and the semifixed VRs inside the power-supply module must not be adjusted without a special reason.

7.1.3 DISASSEMBLY

www.DataSheet4U.com

About detect switch

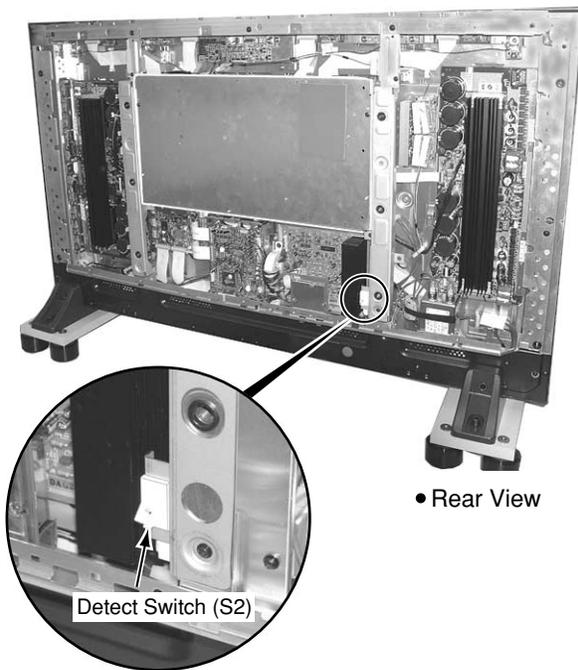

This unit adopt the "Rear Case opened ! detection" system. Please work in service as follows by all means.

● Outline and caution

Perform video transmission from the media receiver to the plasma display with digital signal in the PDP-433HD series. Therefore adopt contents protection by HDCP for copyright protection.

Moreover establish the detect switch which is never turned on the power when "a rear case of plasma display was opened carelessly".

Detect switch does not detect at the power supply OFF and the remote control unit wait state. Please stick this detect switch with tape before turning on the power in inside diagnoses of the plasma display. And please remove it not to forget the tape which stuck after the repair.

● When detect switch has worked by any chance

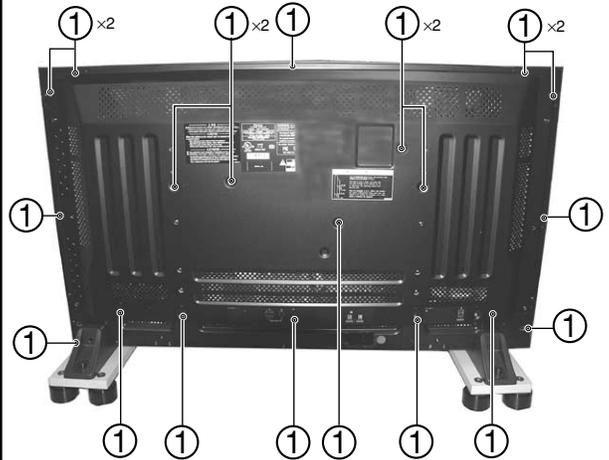

When detect switch works, LED of red blinks in succession by a 300msec period.

Press keys in order of "MENU" key, "ENTER" key and "POWER" key with the remote control unit after sticking the detect switch with tape or close the rear case beforehand. This unit activates and it becomes the service factory mode screen. Afterwards, turn off the power with the remote control unit.

Perform the normal operation afterward.

SW Power Supply Module

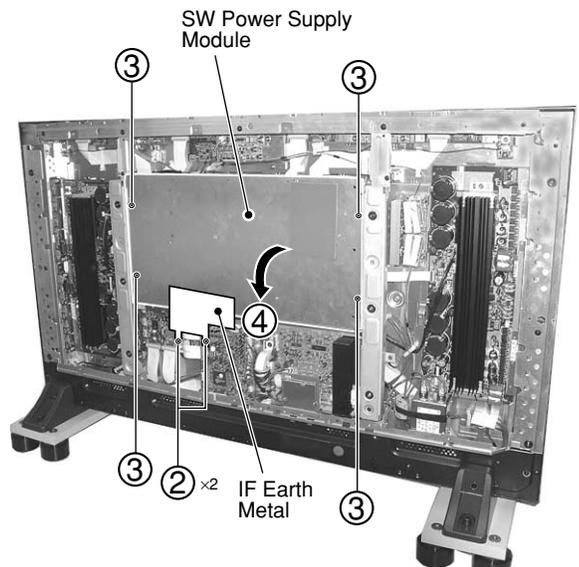

① Remove the Rear Case (P). (Screws × 19)

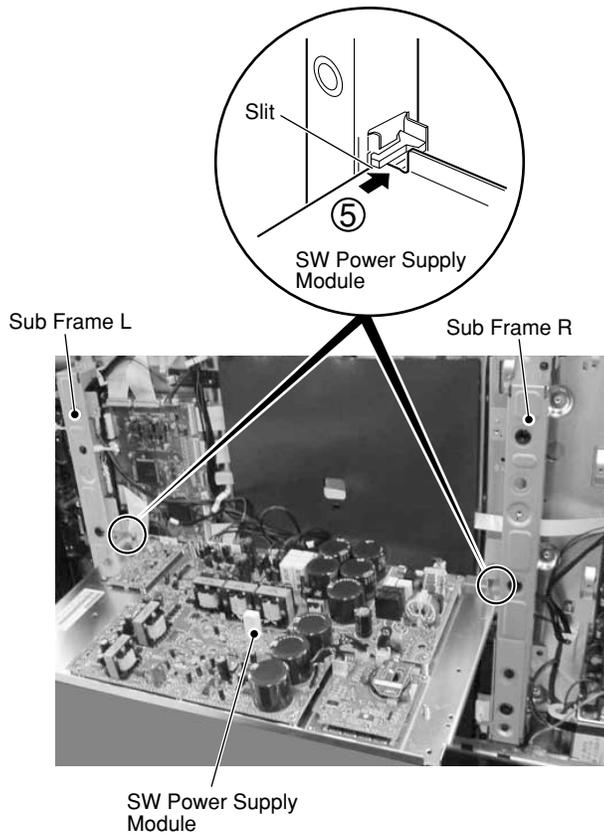

② Remove the IF Earth Metal. (Screws × 2)

③ Remove four screws.

④ Remove the SW Power Supply Module.

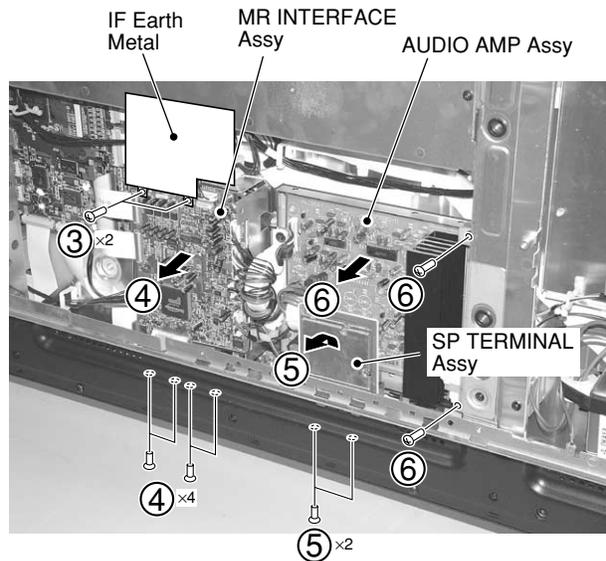

- ⑤ Insert the SW Power Supply Module into the slit of Sub Frame L and R.

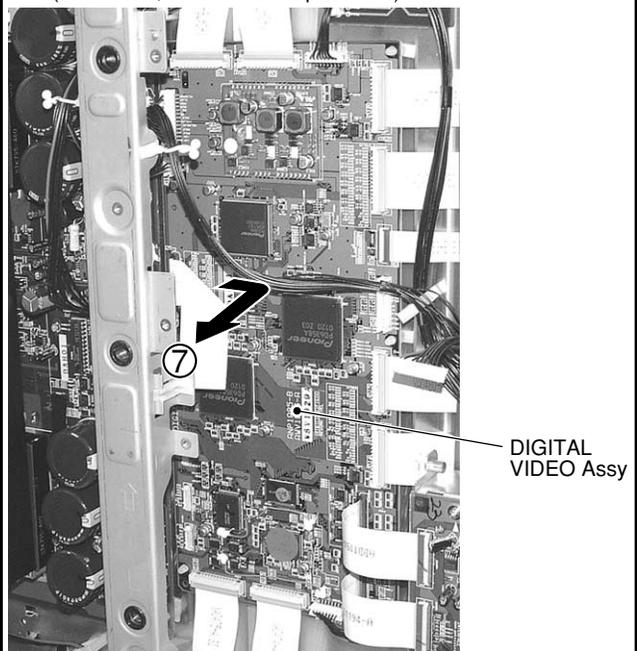

Diagnosis

MR INTERFACE, AUDIO AMP SP TERMINAL and DIGITAL VIDEO Assys

- ① Remove the Rear Case (P). (Screws × 19)
- ② Remove the SW Power Supply Module. (Connector, Screws × 4)
- ③ Remove the IF Earth Metal (Screws × 2)
- ④ Remove the MR INTERFACE Assy (Connector, Screws × 4)
- ⑤ Remove the SP TERMINAL Assy (Connector, Screws × 2)
- ⑥ Remove the AUDIO AMP Assy (Connector, Screws × 2)

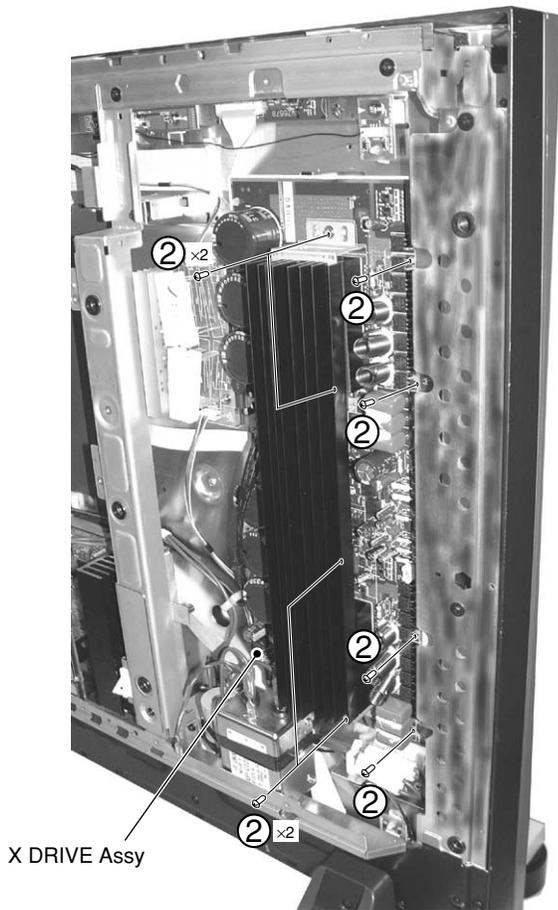

- ⑦ Remove the DIGITAL VIDEO Assy (Connector, Circuit Board Spacer × 6)

X DRIVE Assy

- ① Remove the Rear Case (P). (Screws × 19)
- ② Remove the X DRIVE Assy.
(Connector, PCB Spacer × 3, Screws × 8)

FS781BZB (DIGITAL VIDEO ASSY : IC1802)

• Low EMI Clock IC

• Pin Assignment (Top View)

• Block Diagram

• Pin Function

| No. | Pin Name | I/O | Type | Function |
|-----|----------|-----|----------|---|
| 1/2 | Xin/Xout | I/O | Analog | Pins form an on-chip reference oscillator when connected to terminals of an external parallel resonant crystal. Xin may be connected to TTL/CMOS external clock source. If Xin connected to external clock other than crystal, leave Xout (pin2) unconnected. |
| 7/3 | S0/S1 | I | CMOS/TTL | Digital control inputs to select input frequency range and output frequency scaling. Refer to Tables 7 and 8 for selection. S0 has internal pulldown. S1 has internal pullup. |
| 4 | LF | I | Analog | Loop Filter. Single ended tri-state output of the phase detector. A two-pole passive loop filter is connected to Loop Filter (LF). |
| 6 | FSOUT | O | CMOS/TTL | Modulated Clock Frequency Output. The center frequency is the same as the input reference frequency for FS781. Input frequency is multiplied by 2X and 4X for FS782 and FS784 respectively. |
| 8 | VDD | P | Power | Positive Power Supply |
| 5 | VSS | P | Power | Power Supply Ground |
