### General Description

The SS539 is an integrated Hall effect latched sensor designed for electronic commutation of brush-less DC motor applications. The device integrates a voltage regulator, reverse battery protection diode, Hall sensor with dynamic offset cancellation system, temperature compensation circuitry, small signal amplifier, Schmitt trigger and an open-collector output to sink up to 25 mA

These Hall-effect switches are monolithic integrated circuits with tighter magnetic specifications, designed to operate continuously over extended temperatures to +150°C, and are more stable with both temperature and supply voltage changes. If a magnetic flux density larger than threshold  $B_{op}$ , Output is turned on (low). The output state is held until a magnetic flux density reversal falls below  $B_{RP}$ , causing Output to be turned off (high).

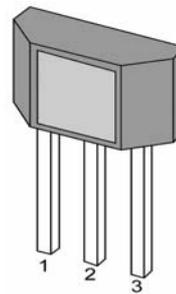

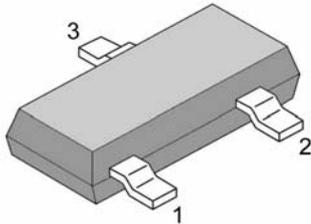

Thanks to its wide operating voltage range and extended choice of temperature range, it is quite suitable for use in DC motor applications.

The device is delivered in a Small Outline Transistor (SOT) or in a Plastic Single In Line (SIP 3L flat). Both 3-lead packages are RoHS compliant.

## Glossary of Terms

MilliTesla (mT), Gauss	Units of magnetic flux density: 1mT = 10 Gauss
RoHS	Restriction of Hazardous Substances
Operating Point ( $B_{OP}$ )	Magnetic flux density applied on the branded side of the package which turns the output driver ON ( $V_{OUT} = V_{DSon}$ )
Release Point ( $B_{RP}$ )	Magnetic flux density applied on the branded side of the package which turns the output driver OFF ( $V_{OUT} = \text{high}$ )

Table 2: Absolute maximum ratings

Operating Temperature Range	Symbol	Value	Units
Temperature Suffix "E"	$T_A$	-40 to 85	°C
Temperature Suffix "K"	$T_A$	-40 to 125	°C
Temperature Suffix "L"	$T_A$	-40 to 150	°C

Exceeding the absolute maximum ratings may cause permanent damage. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
