Description

Clare and IXYS have combined to bring OptoMOS® technology, reliability and compact size to a new family of High Power Solid State Relays. As part of this new family, the CPC1718 single-pole, normally open (1-Form-A) DC Solid State Relay employs optically coupled MOSFET technology to provide 2500V_{rms} of input to output isolation.

The output is constructed with an efficient MOSFET switch and photovoltaic die that uses Clare's patented OptoMOS architecture while the input GaAlAs infrared LED provides the optically coupled control. The combination of low on-resistance and high load current handling capability makes this relay suitable for a variety of high performance DC switching applications.

The unique ISOPLUS-264 package pioneered by IXYS allows solid state relays to achieve the highest load current and power ratings. This package features an IXYS unique process where the silicon chips are soft soldered onto the Direct Copper Bond (DCB) substrate instead of the usual copper leadframe. The DCB ceramic, the same substrate used in high power modules, not only provides 2500V_{rms} isolation but also very low thermal resistance (0.3°C/W).

Thermal Characteristics

Parameter	Conditions	Symbol	Min	Typ	Max	Units
Thermal Resistance (junction to case)	-	$R_{\theta JC}$	-	-	0.3	°C/W
Thermal Resistance (junction to ambient)	Free air	$R_{\theta JA}$	-	33	-	°C/W

Thermal Management

Device high current characterization was performed using Kunze heat sink KU 1-159, phase change thermal interface material KU-ALC 5, and transistor clip KU 4-499/1. This combination provided an approximate junction-to-ambient thermal resistance of 12.5°C/W.

Heat Sink Calculation

Higher load currents are possible by using lower thermal resistance heat sink combinations.

Heat Sink Rating

$$R_{\theta CA} = \frac{(T_J - T_A) I_{L(99)}^2}{I_L^2 \cdot P_{D(99)}} - R_{\theta JC}$$

T_J = Junction Temperature (°C), $T_J \leq 100^\circ\text{C}$ *

T_A = Ambient Temperature (°C)

$I_{L(99)}$ = Load Current with Case Temperature @ 99°C (A_{DC})

I_L = Desired Operating Load Current (A_{DC}), $I_L \leq I_{L(MAX)}$

$R_{\theta JC}$ = Thermal Resistance, Junction to Case (°C/W) = 0.3°C/W

$R_{\theta CA}$ = Thermal Resistance of Heat Sink & Thermal Interface Material, Case to Ambient (°C/W)

$P_{D(99)}$ = Maximum power dissipation with case temperature held at 99°C = 3.33W
