
150mA Voltage Regulator (Wide Input Voltage Range)

NO.EA-100-120521

OUTLINE

The R1154x series are CMOS-based voltage regulator (VR) ICs. The R1154x has features of high output voltage accuracy and ultra-low supply current. A peak current limit circuit, a short current limit circuit, and a thermal shutdown circuit are built in the R1154x series.

The regulator output voltage is fixed in the R1154xxxxB, while adjustable type is the R1154x001C. Output voltage accuracy is $\pm 2.0\%$.

Since the packages for these ICs are DFN1616-6, SOT-23-5, and SOT-89-5, high density mounting of the ICs on boards is possible.

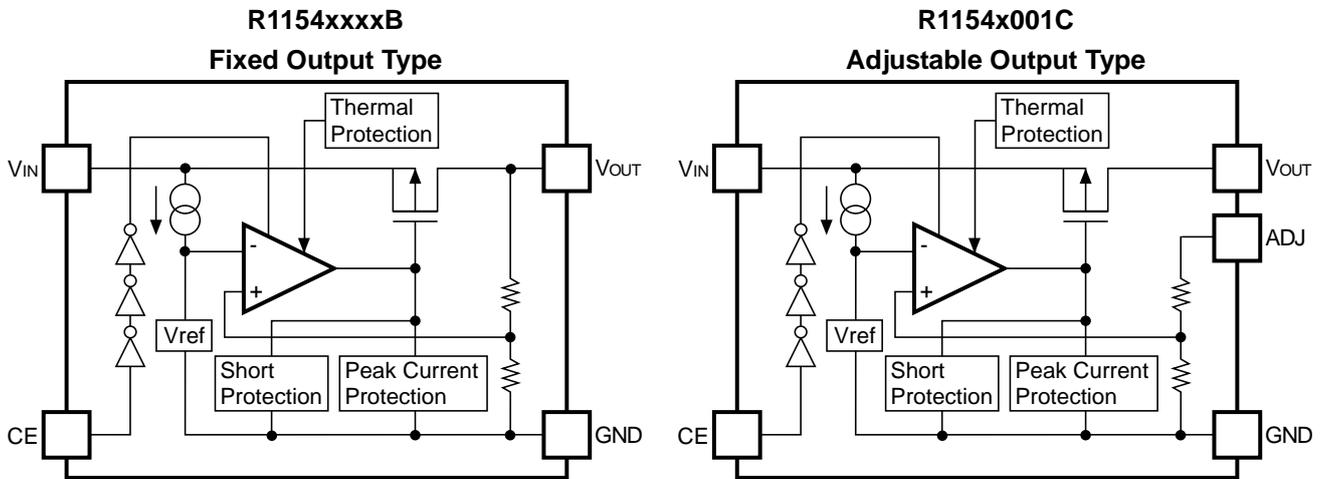

FEATURES

- Supply CurrentTyp. $5.0\mu\text{A}$
- Standby CurrentTyp. $0.1\mu\text{A}$
- Output Voltage Accuracy..... $\pm 2.0\%$
- Wide Output Voltage Range2.5V to 12.0V (0.1V steps) (xxxB)
adjustable in the range of 2.5V to V_{IN} or 24.0V (001C)
(For other voltages, please refer to MARK INFORMATIONS.)
- Input VoltageMax. 24.0V
- Output CurrentMin. 140mA ($V_{\text{IN}}=V_{\text{OUT}}+2.0\text{V}$, 2.5V Output type)
Min. 150mA ($V_{\text{IN}}=V_{\text{OUT}}+2.0\text{V}$, 3.0V Output type)
- PackageDFN1616-6, SOT-23-5, SOT-89-5
- Built-in Peak Current Limit Circuit
- Built-in Short Current Limit Circuit
- Built-in Thermal Shutdown Circuit

APPLICATIONS

- Power source for home appliances such as refrigerators, rice cookers, Electronic water warmers, etc.
- Power source for car audio equipment, car navigation system, and ETC system.
- Power source for notebook PCs, digital TVs, cordless phones, and LAN system.
- Power source for copiers, printers, facsimiles, and scanners.

RECOMMENDED OPERATING CONDITIONS (ELECTRICAL CHARACTERISTICS)

All of electronic equipment should be designed that the mounted semiconductor devices operate within the recommended operating conditions. The semiconductor devices cannot operate normally over the recommended operating conditions, even if when they are used over such conditions by momentary electronic noise or surge. And the semiconductor devices may receive serious damage when they continue to operate over the recommended operating conditions.

TECHNICAL NOTES

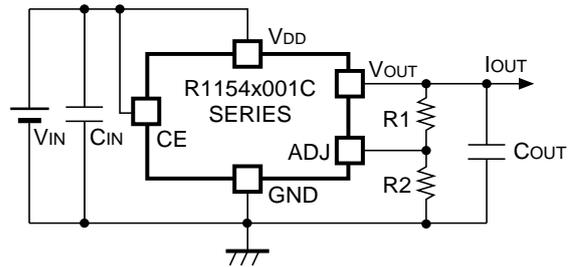

Phase Compensation

Phase Compensation of the R1154x Series has been made internally for stable operation even though the load current would vary. Therefore, without the capacitors, C_{IN} and C_{OUT} , the output voltage is regulated, however, for more stable operation, use capacitors as C_{IN} and C_{OUT} . Especially, if the input line is long and impedance is high, C_{IN} is necessary, moreover, if you use C_{OUT} , transient response will be improved. Recommended value is in the range from $0.1\mu\text{F}$ to $2.2\mu\text{F}$. Wiring should be made as short as possible.

Connect the capacitor, C_{IN} between V_{DD} pin and GND pin and C_{OUT} between V_{OUT} and GND as close as possible.

R1154xxxxB Typical Application

R1154xxxxC Typical Application

Thermal Shutdown

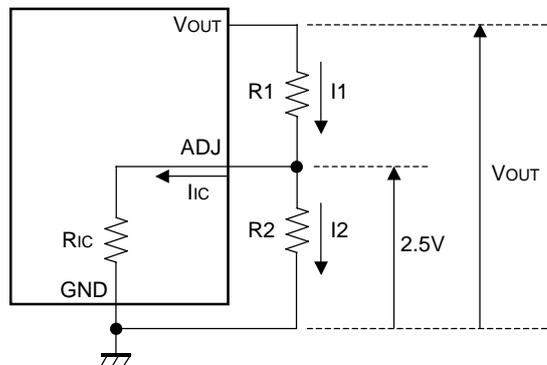

Thermal shutdown function is included in the R1154x Series, if the junction temperature is equal or more than $+150^{\circ}\text{C}$ (Typ.), the operation of regulator would stop. After that, when the junction temperature is equal or less than $+125^{\circ}\text{C}$ (Typ.), the operation of regulator would restart. Unless the cause of rising temperature would remove, the regulator repeats on and off, and output waveform would be like consecutive pulses.

Chip Enable Circuit

Do not make voltage level of chip enable pin keep floating level, or in between V_{IH} and V_{IL} . Unless otherwise, Output voltage would be unstable or indefinite, or unexpected current would flow internally.

* Technical Notes on Output Voltage Setting of C type

Figure 1. Adjustable Regulator (C type)

The Output Voltage of Regulator in R1154xxxxC may be adjustable for any output voltage between its 2.5V reference and its V_{DD} setting level. An external pair of resistors is required, as shown in Figure 1. The complete equation for the output voltage is described step by step as follows;

$$I_1 = I_{IC} + I_2 \dots\dots\dots (1)$$

$$I_2 = 2.5/R_2 \dots\dots\dots (2)$$

Thus,

$$I_1 = I_{IC} + 2.5/R_2 \dots\dots\dots (3)$$

Therefore,

$$V_{OUT} = 2.5 + R_1 \times I_1 \dots\dots\dots (4)$$

Put Equation (3) into Equation (4), then

$$\begin{aligned} V_{OUT} &= 2.5 + R_1(I_{IC} + 2.5/R_2) \\ &= 2.5(1 + R_1/R_2) + R_1 \times I_{IC} \dots\dots\dots (5) \end{aligned}$$

In 2nd term, or $R_1 \times I_{IC}$ will produce an error in V_{OUT} .

In Equation (5),

$$I_{IC} = 2.5/R_{IC} \dots\dots\dots (6)$$

$$\begin{aligned} R_1 \times I_{IC} &= R_1 \times 2.5/R_{IC} \\ &= 2.5 \times R_1/R_{IC} \dots\dots\dots (7) \end{aligned}$$

For better accuracy, choosing $R_1 \ll R_{IC}$ reduces this error.

The release of such information is not to be construed as a warranty of or a grant of license under Ricoh's or any third party's intellectual property rights or any other rights.
5. The products listed in this document are intended and designed for use as general electronic components in standard applications (office equipment, telecommunication equipment, measuring instruments, consumer electronic products, amusement equipment etc.). Those customers intending to use a product in an application requiring extreme quality and reliability, for example, in a highly specific application where the failure or misoperation of the product could result in human injury or death (aircraft, spacevehicle, nuclear reactor control system, traffic control system, automotive and transportation equipment, combustion equipment, safety devices, life support system etc.) should first contact us.
6. We are making our continuous effort to improve the quality and reliability of our products, but semiconductor products are likely to fail with certain probability. In order to prevent any injury to persons or damages to property resulting from such failure, customers should be careful enough to incorporate safety measures in their design, such as redundancy feature, firecontainment feature and fail-safe feature. We do not assume any liability or responsibility for any loss or damage arising from misuse or inappropriate use of the products.
7. Anti-radiation design is not implemented in the products described in this document.
8. Please contact Ricoh sales representatives should you have any questions or comments concerning the products or the technical information.
